

FUELWELL · IOS APP SPECIFICATION

PHASE 0.5 · STEP 1

App Map

Every screen, every parent-child relationship,
every onboarding step — one place. Approved by
Robert and Max, May 13 2026.

Audience

Robert · Max · Pilot reviewers

Branch

feature/phase-0-realignment

Date

2026-05-19

Status:  APPROVED — Max reviewed and reconciled 2026-05-13. All 6 open questions resolved; one new screen added (Daily Recap, #14); one new onboarding step added (Lifestyle).

Purpose: one-page sitemap showing every screen in the Pilot app, parent/child relationships, and the onboarding entry sequence. No navigation arrows yet (that's Step 2 — Flow Chart). No layout opinions yet (that's Step 3 — Wireframes).

Root principle (PRINCIPLES.md): Dashboard is the root. Every other screen exists to serve the Daily Loop — *Dashboard* → *Log* → *Adjust* → *Continue* → *Repeat*.

1. Entry sequence — Onboarding (pre-tab)

Runs once per user, ahead of the tab bar. Output: a profile, baseline macros, and a first plan.

Welcome

- Sign in / Sign up (Apple Sign-In + email/password)
- Goal selection (lose / maintain / gain / recomp-deferred)
- Body baseline (height, weight, age, sex, activity)
- Dietary constraints (allergies, preferences, dislikes)
- Lifestyle (cook at home / eat out mostly / both) ← NEW per M
- HealthKit permission prompt (read-only: weight, steps, workouts, active)
- Notification permission prompt (event-driven coaching)
- "Your Plan" reveal (computed macros + why-this-plan explainer)
- Dashboard (Daily Loop starts)

The Lifestyle question immediately improves restaurant and recipe ranking. One tap, zero friction.

2. Main app — bottom tab bar (5 tabs)

■ 3. Screen inventory (17 top-level)

Grouping sub-sheets under their parent screen. Modals/sheets (capture, entry, confirm) are not counted as standalone screens.

#	TOP-LEVEL SCREEN	TAB	NOTES
1	Dashboard	Home	Root of Daily Loop. Verdict-first. Above the fold: Health Score hero + macro ring + next recommended meal + "I'm eating out right now" quick action + week-schedule day tiles (workout/rest) + workout to-do checklist + habit-tracking dot grid + coach nudge + mood/energy one-tap.
2	Your Plan / Profile	Home	Includes "why this plan" + manual recalc trigger with confirm modal.
3	Settings	Home	Account, export, sign-out, notification prefs.
4	Meal Log (day view)	Log	Day's entries + persistent floating add button.
5	Add Meal (Photo / Search / Scan)	Log	Three modes via segmented control. Photo is the default tab.
6	Restaurant Guidance	Log	Curated DB. Surfaceable from Dashboard in one tap; top 3 picks show macros immediately.
7	Recipe Browser + Detail	Log	Leads with "based on your remaining macros today."
8	Meal Plan Generator	Log	Three options per generation; each card has a single-line summary.
9	Grocery List	Log	Auto from recipes + manual additions. Grouped by category.
10	Workout Plan / Workout Detail	Log	NEW. Today's workout (exercises, sets, reps, target weight, est. time), plus the week's schedule. Manual-entry-only at Pilot — no adaptive prescription.
11	Coach Chat	Coach	AI conversation with inline Learn cards. Input placeholder: "Ask me anything about today...".

#	TOP-LEVEL SCREEN	TAB	NOTES
12	Learn (search + categories)	Learn	3-minute reads max; each article ends with one actionable takeaway.
13	Progress overview	Progress	Weight, macros, photos, measurements, mood, habit-tracking heatmap , Health Score trend . Default view: weekly.
14	Health Score detail	Progress child	NEW. Breakdown of the composite Health Score (nutrition adherence + training + sleep + recovery + body comp). Tappable from Dashboard hero.
15	Habit Tracking detail	Progress child	NEW. Full habit grid with definitions, streaks-as-visualization-only (no celebratory chrome), edit habits.
16	Onboarding flow	(pre-tab)	Welcome → Sign-in → Goal → Body → Dietary → Lifestyle → HealthKit → Notifications → Plan reveal.
17	Daily Recap / Coach Summary	Home child	What the coach noticed today; triggered at 8pm or reachable from Dashboard.

Sheets / modals (not counted as screens): Food Detail editor, Recipe → Grocery confirm, Photo Capture, Measurements Entry, Mood Entry, Recompute Plan confirm, Workout Set Logger, Habit Toggle, permission prompts.

Dashboard affordances (not standalone screens):

- **"I'm eating out right now" quick action** — Dashboard CTA → Restaurant Guidance with today's remaining macros pre-loaded.
- **Week-schedule day tiles** — horizontal row showing the next 3–7 days, each tile marks rest day / workout type and duration. Tap → Workout Detail.
- **Workout to-do checklist** — today's planned exercises as a checkbox list. Inline tap completes a set; long-press logs detail.
- **Habit-tracking dot grid** — compact heatmap of habits over recent weeks. Tap → Habit Tracking detail.
- **Coach nudge card** — appears only when an event is triggered.

Anti-pattern reminder (DESIGN.md): no celebratory streak chips, badges, or gamification. The habit grid is a *visualization*, not a reward. The Health Score is a *diagnostic*, not a score-to-beat.

Every screen requires a thoughtful empty state.

■ 4. Open questions — resolved by Max (2026-05-13)

#	QUESTION	RESOLUTION
1	Where does Meal Plan Generator live?	Log. Food decision, not a coaching conversation.
2	Restaurant Guidance under Log vs. Coach?	Log. Standing-outside-restaurant moments need fast frictionless answers, not chat. Coach is for reflection.
3	Recipe Browser — Log or Learn?	Log. Recipes are decisional, not educational.
4	"Your Plan" as its own tab?	No — Home child. Reference material, not a daily visit. Respects iOS HIG ≤ 5 tabs.
5	Onboarding intake matches drafted 6-step?	Yes, plus add Lifestyle step (cook at home / eat out / both) after Dietary constraints. Improves restaurant + recipe ranking immediately.
6	Is there a 13th top-level screen missing?	Yes — add Daily Recap / Coach Summary as #14. Closes the loop on event-driven notifications by giving users a place to review what the coach noticed today.

■ 5. Per-screen modifications from Max's review

These don't change the screen list — they shape each screen's design and are inputs to Step 2 (Flow Chart) and Step 3 (Wireframes).

SCREEN	MODIFICATION
Onboarding	"Your Plan" reveal should feel like a payoff, not a confirmation. Don't cut the why-this-plan explainer. Add Lifestyle step after Dietary.
Dashboard	All four essentials above the fold: macro ring, next recommended meal, one coach nudge if triggered, mood/energy one-tap. Add "I'm eating out right now" quick action that jumps to Restaurant Guidance with today's macros pre-loaded.
Your Plan	Recalculate My Plan needs a confirm modal — intentional, slightly weighty feel.
Meal Log	Persistent floating add button — opened multiple times per day, must be fast.

SCREEN	MODIFICATION
Add Meal	Photo mode is the default tab , not Search.
Restaurant Guidance	Surfaceable from Dashboard in one tap. Top 3 picks show macros immediately. Curated feel, not directory.
Recipe Browser	Leads with "based on your remaining macros today" — that's the differentiator.
Meal Plan Generator	Each option gets a single-line summary so users can choose without reading every macro.
Grocery List	Grouped by category (produce, protein, pantry). Clean and minimal, not spreadsheet.
Coach Chat	Soul of the app. Inline Learn cards expanding inside chat is the right pattern. Placeholder copy matters: <i>"Ask me anything about today..."</i> .
Learn	3-minute reads max. Every article ends with one actionable takeaway. Smart-friend tone, never academic.
Progress	Default to weekly view , not daily. Daily fluctuations are noisy and discouraging.

■ 6. Status

- [x] Max review and reconciliation against the Execution Blueprint screen numbering (2026-05-13)
- [x] Robert + Max agreement on the 6 open questions
- [] Sign-off recorded in `docs/ios-guide/decisions.md`

Output of Phase 0.5 · Step 1 — Approved 2026-05-13. Next: Step 2 — Flow Chart (updated with new screens + Max's per-screen modifications).
