- 1 Resolved blockers (Max's Step 2 review)
- 2 App Map v2
- 3 Flow Chart v2
- 4 Mockup deck (37 screens)
- 5 Sign-off

Mockup sections

▪ Onboarding (Round 1 — re-homed)	9 screens
▪ Home tab	10 screens
▪ Meals & Nutrition tab	10 screens
▪ Coach tab	3 screens
▪ Exercise & Activity tab	2 screens
▪ Progress tab	2 screens
▪ Cross-tab components	1 screens

Max's five blockers — all resolved

- 1 Dashboard density.** Tier 1/2/3 framework adopted. Max 3 visual units above the fold (Health Score · Inflows/Outflows · Verdict CTA).
- 2 Health Score v1 formula.** Nutrition 35% · Training 25% · Sleep 20% · Recovery 10% · Body comp 10%. Range 0–100. Missing components excluded with proportional reweighting. Day-1 fallback message.
- 3 Workout active session.** Specified as a three-state flow: pre-workout · active (set logger + rest timer) · summary (RPE selector).
- 4 Empty states.** 26-row table committed in App Map § 9. Coach voice. Every screen that can render data-empty has copy.
- 5 Daily Recap trigger.** 8pm local device time. Quiet hours 10pm–7am clear by 2 hours. Inherits future custom notification schedules.

App Map v2

Status:  APPROVED v2 — Robert reorganized the IA 2026-05-19 after the Round 1 mockup review. Max's Step 2 blockers resolved. All 27 Round 1 mockups stay; they're re-homed in the new tab/menu structure.

What changed from v1 → v2:

- Tab bar: Home · Log · Coach · Learn · Progress → **Home · Meals/Nutrition · Coach · Exercise & Activity · Progress**
- Coach is the centerpiece tab — visually distinct (speech-bubble icon, inverted shading)
- "Learn" tab dissolved into the new **Help** screen, accessed from the Dashboard top bar
- New top-level navigation surface: a **hierarchical Menu** (Tools / Coach / Settings / Help / About)
- Dashboard adopts **Max's Tier 1/2/3 framework** — max 3 elements above the fold
- New Dashboard widget: **Inflows/Outflows** (dual concentric ring with day/week/month/year toggle)
- New per-tab landing pages: **Meals/Nutrition hub** and **Exercise & Activity hub** (the old "Meal Log day view" and "Workout Detail" are sub-pages under these)
- Nothing is deleted — every Round 1 screen has a new home

Root principle (PRINCIPLES.md): Dashboard is the root. Every other screen exists to serve the Daily Loop — *Dashboard → Log → Adjust → Continue → Repeat*.

■ 1. Entry sequence — Onboarding (pre-tab)

Unchanged from v1. Nine sequential steps; runs once per user.

```
FuelWell (splash)
  → Sign in / Register
    |— First-time → Onboarding → existing 9-step flow
    |   1. Welcome
    |   2. Sign in / Sign up
    |   3. Goal selection
    |   4. Body baseline
    |   5. Dietary constraints
    |   6. Lifestyle
    |   7. HealthKit permission
    |   8. Notification permission
    |   9. Your Plan reveal
    |       → Dashboard (Daily Loop starts)
    |— Returning → Dashboard direct
```

■ 2. Tab bar — five tabs, Coach centered

ORDER	TAB	VISUAL TREATMENT	TIER
1 (leftmost)	Home	Standard SF Symbol <code>house.fill</code>	Outer
2	Meals & Nutrition	Standard SF Symbol <code>fork.knife</code>	Second
3 (center, prominent)	Coach	Speech-bubble icon, inverted (<code>bg.elevated</code> #0F1117) container, slight elevation	Centerpiece
4	Exercise & Activity	Standard SF Symbol <code>figure.run</code>	Second
5 (rightmost)	Progress	Standard SF Symbol <code>chart.line.up.trend.xyaxis</code>	Outer

The Coach tab is always visually distinct, even when inactive. The rest follow iOS standard active/inactive coloring.

■ 3. Dashboard — Tier 1/2/3 framework (Max's blocker resolved)

The Home tab root. Top bar carries Menu (left) and Help (right). Max's hard ceiling: **maximum 3 visual units above the fold**.

Tier 1 — always above fold

ELEMENT	WHY TIER 1
Health Score hero	Single most important signal of how the user is doing. Includes 30-day delta and "Why?" expander.
Inflows/Outflows widget (dual concentric ring)	Creative energy-balance visual. Outer ring = calories in by macro; inner ring = calories out by source (BMR / activity / workout). Center = net. Toggles day/week/month/year.
Verdict-of-the-moment CTA	One-line "what should I do right now" with a primary action. The Daily Loop's entry point.

Tier 2 — visible on first scroll

- Activity overview card (workouts logged, active minutes, calories burned, mini weekly bar)
- Nutrition/Meals overview card (today's meals snapshot, remaining macros bar)
- My day / week / month view (segmented timeline of intake vs. expenditure over the chosen window)

Tier 3 — progressive disclosure (deeper scroll or expanded states)

- Progress overview summary (sparkline + trend line)
- Daily Recap card (appears only after 8pm — also triggered as a push and accessible from the Menu)
- Coach nudge card (event-driven — appears only when a trigger fires; otherwise hidden)

Habit Tracking is NOT on the Dashboard in v2. It lives in the Progress tab and in the Menu under Tools > Tracking.

■ 4. Menu — hierarchical navigation (new in v2)

Opened from the hamburger icon top-left of Dashboard (and any screen via the universal Menu icon). Full-screen sheet with grouped sections.

USER HEADER (avatar · name · goal pill · today's Health Score)

■ 5. Help screen — replaces the v1 Learn tab

Accessed from the Help icon top-right of Dashboard. Single screen that combines:

- **Search bar** — "Search articles, settings, or ask a question"
- **Featured article today** — hero card with image, 3-min read pill
- **Categories** — Nutrition basics · Macros explained · Eating out · Recovery · Training fundamentals · Sleep & energy · Mindset
- **Continue reading** — articles started but not finished
- **Quick settings** — Notifications, HealthKit, Account, plus "All settings →"
- **Talk to coach** — small card linking to Coach Chat
- **Send feedback** — text-link

Article tone (carried over from v1 Learn): ≤3-minute reads, smart-friend voice, every article ends with a "One thing to try today" actionable takeaway card.

■ 6. Tab landings (new in v2)

Each non-Home tab opens a **hub landing page** that surfaces sub-pages, not a single screen.

6.1 Meals & Nutrition tab landing

SECTION	CONTENT
Hero	Today's plate — compact Inflows/Outflows ring + remaining macros bar
Today's meals	Logged meal rows + pending dinner slot
Quick access	Meal Log · Restaurant Guidance · Recipe Browser · Meal Plan Generator · Grocery List · Macro History
Recent foods	Horizontal scroll of recent meal chips for one-tap re-log

6.2 Exercise & Activity tab landing

SECTION	CONTENT
Hero	Today's workout card OR Rest day card
This week	Day chips with workout/rest indicators and minutes
Quick access	Workout Log · Activity Tracker · Workout Plans · Exercise Library · Schedule · Trainer workouts (manual entry)
Recent workouts	Last 3 logged workouts

6.3 Progress tab landing (v2)

Default time range: weekly.

SECTION	CONTENT
Health Score trend	Current score + 30-day delta + sparkline. Tap → Health Score detail.
Weight	Line chart of weekly averages + "Add weight"
Macro adherence	Weekly bar chart + summary
Body photos	Horizontal scroll + "Add photo"
Measurements	List with weekly trend arrows
Mood & energy	Weekly average + small heatmap
Habit Tracking	Compact dot grid (last 14 days × 4 habits) + "View all habits" link

6.4 Coach tab

Coach Chat. Inline Learn cards expand within the chat (the article surface remains in Help, but contextual cards are also surfaced inline).

■ 7. Screen inventory v2 — 30 top-level screens (17 from v1 re-homed + 13 new/elevated)

New in v2 marked with ★. **Re-homed from v1** marked with ↻.

Home tab

#	SCREEN	NOTES
1	Dashboard v2 ★	Tier 1/2/3 layout per Max
2	Daily Recap / Coach Summary ↻	Reachable from Dashboard card, 8pm push, and Menu
3	Your Plan / Profile ↻	Recalc confirm modal
4	Settings ↻	Reachable from Menu and Help
5	Menu (hierarchical sheet) ★	New navigation surface
6	Help screen ★	Replaces v1 Learn tab
7	Inflows/Outflows full screen ★	Sankey-style flow diagram, daily/weekly/monthly/yearly
8	Health Score detail ↻	Composite breakdown
9	Habit Tracking detail ↻	Reached from Menu and Progress

Meals & Nutrition tab

#	SCREEN	NOTES
10	Meals & Nutrition hub ★	Tab landing
11	Meal Log day view ʘ	Persistent floating add button
12	Add Meal sheet ʘ	Photo default
13	Food Detail / Portion editor ʘ	Sheet
14	Restaurant Guidance ʘ	Curated chain DB
15	Restaurant Detail ʘ	Coach picks at top
16	Recipe Browser ʘ	Leads with remaining-macros section
17	Recipe Detail ʘ	Add to Grocery / Log as meal
18	Meal Plan Generator ʘ	Three options, single-line summaries
19	Grocery List ʘ	Grouped by category
20	Macro History ★	Detail charts for macro adherence

Coach tab

#	SCREEN	NOTES
21	Coach Chat ʘ	Soul of the app, "Ask me anything about today..." placeholder
22	Article Detail ʘ	Reachable from Help and inline from Coach Chat

Exercise & Activity tab

#	SCREEN	NOTES
23	Exercise & Activity hub ★	Tab landing
24	Workout Detail ʘ	Active session: pre-workout + in-progress + summary
25	Workout Log ★	History view of past workouts
26	Activity Tracker ★	Passive activity from Apple Health
27	Workout Plans ★	Library / templates
28	Exercise Library ★	Searchable exercise reference
29	Schedule ★	Week / month view of planned workouts

Progress tab

#	SCREEN	NOTES
30	Progress overview v2 	Weekly default; surfaces Health Score, weight, macros, photos, measurements, mood, habits

Sheets / modals (not counted as screens): Food Detail editor, Recipe → Grocery confirm, Photo Capture, Measurements Entry, Mood Entry, Recompute Plan confirm, Workout Set Logger, Habit Toggle, permission prompts, Inflows/Outflows lane drill-down sheets.

Anti-pattern reminder (DESIGN.md): no celebratory streak chips, badges, or gamification. The Habit grid is a *visualization*, not a reward. The Health Score is a *diagnostic*, not a score-to-beat.

■ 8. Health Score v1 formula (Max's blocker resolved)

COMPONENT	WEIGHT	SOURCE
Nutrition adherence	35%	% of days within macro targets, rolling 7-day window
Training consistency	25%	Workouts completed vs. planned, rolling 7-day window
Sleep	20%	Average sleep duration + consistency, rolling 7-day window
Recovery (HRV / RHR)	10%	HRV trend + resting HR vs. baseline, rolling 7-day window
Body comp trend	10%	Weight + body fat % movement vs. goal direction

- **Range:** 0–100
- **Missing components:** *excluded* — remaining components re-weighted proportionally. No penalty zeros.
- **Day-1 fallback:** display "Building your baseline — 7 days of data unlocks your Health Score" with a placeholder ring. No score number rendered.
- **Score is a diagnostic, not a competition.** No leaderboards, no "your friends scored X" comparisons, ever.

■ 9. Empty states — required on every screen (Max's blocker resolved)

A thoughtful empty state is a brand moment, not a placeholder. Every screen below has an empty-state copy line in coach voice.

SCREEN	TRIGGER	EMPTY-STATE COPY
Dashboard	Day 1, no data	"Welcome — your day starts here. Log your first meal whenever you're ready."

SCREEN	TRIGGER	EMPTY-STATE COPY
Health Score	<7 days of data	"Building your baseline — 7 days of data unlocks your Health Score."
Inflows/Outflows	No meals or workouts logged today	"Log your first meal or workout to see your energy flow."
Meal Log	Day 1, no entries	"No meals logged yet. The fastest way is a photo — tap the + below."
Add Meal (Search)	No recent foods	"Start typing — we'll pull from your previous meals and the food database."
Recipe Browser (for-macros)	No saved recipes that fit today	"Nothing in your saved recipes fits today's remaining macros. Want a fresh meal plan, or browse all?"
Meal Plan	No plan generated this week	"Tell us your week. We'll generate three options."
Grocery List	Empty	"Your list is empty. Generate a meal plan or add items below."
Restaurant Guidance	No location granted	"We can show top picks anywhere — grant location to sort by what's nearby, or browse the curated chain list."
Coach Chat	First open	"Hi Robert. I'm here when you want a second opinion. What's on your mind?"
Help / Learn	No saved articles	"Browse by category, or search for a question. Every article ends with one thing you can try today."
Article Detail	Article unavailable	"We couldn't load this article. Try again, or browse another below."
Progress overview	<7 days of data	"Progress fills in as you log. Weight, photos, mood — one entry kicks it off."
Weight history	Empty	"Log a weight and we'll start your trend line."
Body photos	Empty	"Photos make recomposition real. Add one when you're ready."
Measurements	Empty	"Tape measurements catch what the scale misses."
Mood & energy	Empty	"How are you feeling? One tap and we start to see the patterns."
Habit Tracking	No habits chosen	"Pick 3 habits to start. Coach can suggest some."
Daily Recap	<1 full day of data	"Tomorrow's the start of your recap. The more you log, the smarter this gets."
Workout Detail	No workout planned today	"No workout planned today. Pick a template, or take a rest day."

SCREEN	TRIGGER	EMPTY-STATE COPY
Workout Log	No history	"Your first logged workout shows up here."
Activity Tracker	No Apple Health data	"Connect Apple Health to see your daily movement here."
Workout Plans	No saved plans	"Browse plans or build your own — coach can suggest one based on your goals."
Exercise Library	No favorites	"Tap an exercise for the form video and tip notes."
Schedule	Empty week	"Plan a workout to start your week."
Settings	n/a	n/a

■ 10. Daily Recap trigger (Max's blocker resolved)

- **Trigger time:** 8pm **local device time.**
- **Quiet hours:** 10pm–7am. 8pm clears the window by 2 hours.
- **Future-state inheritance:** if the user customizes their notification schedule in a future release, Daily Recap inherits that schedule.
- **Travel / timezone change:** trigger fires at 8pm in the new local time after the device switches zones. No retro-fire.

■ 11. Status

- [x] Max review of v1 (2026-05-13)
- [x] App Map v2 reorganization (Robert, 2026-05-19)
- [x] All 5 of Max's Step 2 blockers resolved
- [] Round 2 mockups generated (Dashboard v2, Inflows/Outflows widget + full, Activity overview, Meals/Nutrition hub, Exercise & Activity hub, Progress v2, Menu, Help, Tab bar component)
- [] Combined review PDF compiled for final round
- [] Sign-off recorded in `decisions.md`

Output of Phase 0.5 · Step 1 v2 — Updated 2026-05-19. Next: regenerate Step 2 (Flow Chart) and Step 4 (Mockups Round 2) against this IA.

Flow Chart v2

Status:  UPDATED 2026-05-19 to App Map v2. Navigation arrows and per-button behavior across all 30 top-level screens (17 re-homed from v1 + 13 new/elevated).

Purpose: answers "what happens when I tap this?" for every interactive element on every screen. Still no visual opinions — that's Step 4 (Mockups).

Format: Mermaid navigation diagrams + per-screen button reference tables.

1. Master navigation diagram

2. Onboarding flow (linear, unchanged from v1)

Nine steps. Each has Next and Back. HealthKit and Notification prompts are skippable but log the skip for contextual re-prompt later.

3. Per-screen button reference

3.1 Dashboard v2 (Home tab root)

Above-the-fold contract (Tier 1): Health Score hero · Inflows/Outflows widget · Verdict-of-the-moment CTA. No other elements allowed above the fold.

Top bar:

ELEMENT	TAP BEHAVIOR
Hamburger (top-left)	→ Menu sheet

ELEMENT	TAP BEHAVIOR
Brand / FuelWell wordmark (center, optional)	Decorative
Help icon (top-right)	→ Help screen

Tier 1 widgets (above fold):

ELEMENT	TAP BEHAVIOR
Health Score hero (number + delta + sparkline)	→ Health Score detail
Health Score "Why?" expander	Inline reveal of weighting and recent contributors
Inflows/Outflows dual-ring widget	→ Inflows/Outflows full screen
Inflows/Outflows time-window pill (Today/Week/Month/Year)	Switches the widget's data window in place
Verdict-of-the-moment CTA (primary button)	→ Add Meal sheet (Photo default), pre-routed to predicted meal slot OR → Workout Detail (if next move is training)

Tier 2 widgets (first scroll):

ELEMENT	TAP BEHAVIOR
Activity overview card	→ Exercise & Activity hub
Nutrition/Meals overview card	→ Meals & Nutrition hub
My day / week / month view	→ Inflows/Outflows full screen with matching window selected

Tier 3 widgets (progressive):

ELEMENT	TAP BEHAVIOR
Progress overview summary	→ Progress tab landing
Daily Recap card (after 8pm only)	→ Daily Recap screen
Coach nudge card (event-driven)	→ Coach Chat with prompt context preloaded

3.2 Menu sheet (new)

Opened from the hamburger icon. Full-screen sheet. See APP-MAP § 4 for the full hierarchy.

ELEMENT	TAP BEHAVIOR
Close X	Dismiss sheet
User header (avatar + name)	→ Your Plan / Profile

ELEMENT	TAP BEHAVIOR
Today's Health Score chip (in header)	→ Health Score detail
Any Tools row	→ that screen (e.g. Tools › Snapshot › Health Score → Health Score detail)
Coach Chat row	→ Coach Chat
Settings rows	→ relevant Settings sub-screen
Help row	→ Help screen
About row	→ About screen (Privacy, Terms, Share, Version)
Sign out (destructive)	Confirm sheet → Sign out → AuthCheck → Welcome

3.3 Help screen (new — replaces Learn tab)

ELEMENT	TAP BEHAVIOR
Back chevron	Returns to caller (Dashboard or Menu)
Search bar	Full-text search across articles, settings, FAQs
Featured article hero	→ Article Detail
Category tile	Filters Help to that category
Continue-reading card	→ Article Detail at saved scroll position
Quick settings row	→ that specific settings sub-screen
"All settings →" link	→ Settings (full)
Talk to coach card	→ Coach Chat
Send feedback link	→ mailto sheet

3.4 Inflows/Outflows full screen (new)

ELEMENT	TAP BEHAVIOR
Back chevron	Returns to caller (Dashboard or My day view)
Time window segmented [Today/Week/Month/Year]	Re-renders the Sankey for that window
Sankey intake lane (e.g. "Lunch · 612 kcal")	→ drill-down sheet with that meal's macros
Sankey expenditure lane (e.g. "Workout · 250 kcal")	→ drill-down sheet with workout details
Info "i" icon	Inline explainer of the visualization
Detail rows below Sankey	→ matching detail sheet

3.5 Health Score detail (re-homed)

ELEMENT	TAP BEHAVIOR
Back chevron	Returns to caller
Hero (current score + 30-day delta + sparkline)	Decorative
Component card (Nutrition / Training / Sleep / Recovery / Body comp)	→ that Progress section
"Why this score" expander	Coach-voice explainer of weights and recent contributors
Day-1 placeholder ("Building your baseline")	Decorative — no tap target

3.6 Daily Recap (re-homed)

ELEMENT	TAP BEHAVIOR
Close X	Returns to caller (Dashboard or Menu)
Hero verdict	Decorative
Highlight rows (macro / sleep / mood / training / weight)	Tap → relevant Progress section
Tomorrow card	Decorative
"Reply to coach" button	→ Coach Chat with recap context preloaded

3.7 Your Plan / Profile (re-homed)

ELEMENT	TAP BEHAVIOR
"Why this plan" expander	Reveals reasoning inline
"Recalculate My Plan" button	→ Recompute Plan confirm modal → recompute
Edit goal · body · dietary · lifestyle	→ respective onboarding step (single-step, returns here)
Settings gear	→ Settings

3.8 Meals & Nutrition hub (new tab landing)

ELEMENT	TAP BEHAVIOR
Hero (Inflows/Outflows compact ring)	→ Inflows/Outflows full screen
Today's meals row	→ Food Detail (editable)
Add (+) button	→ Add Meal sheet
Quick access: Meal Log	→ Meal Log day view

ELEMENT	TAP BEHAVIOR
Quick access: Restaurant Guidance	→ Restaurant Guidance
Quick access: Recipe Browser	→ Recipe Browser
Quick access: Meal Plan Generator	→ Meal Plan Generator
Quick access: Grocery List	→ Grocery List
Quick access: Macro History	→ Macro History
Recent food chip	One-tap re-log with last-used portion

3.9 Meal Log day view (re-homed)

Unchanged from v1.

ELEMENT	TAP BEHAVIOR
Day selector	Changes the day's entries
Meal row	→ Food Detail (editable)
Persistent floating add button	→ Add Meal sheet (Photo default)
Restaurants shortcut	→ Restaurant Guidance
Recipes shortcut	→ Recipe Browser

3.10 Add Meal — Photo / Search / Scan (sheet)

Unchanged from v1. Photo is the default tab.

ELEMENT	TAP BEHAVIOR
Segmented control [Photo / Search / Scan]	Switches input mode
Photo shutter	→ Camera → AI parse → Food Detail with parsed items
Search result row	→ Food Detail with portion editor
Barcode scan	→ Camera in scan mode → Food Detail
Recent foods chip	One-tap log with last-used portion

3.11 Food Detail / Portion editor (sheet)

Unchanged from v1.

ELEMENT	TAP BEHAVIOR
Portion stepper	Adjusts macros live
Meal slot selector	Breakfast / Lunch / Dinner / Snack

ELEMENT	TAP BEHAVIOR
Save	Persists meal → returns to caller
Delete	Confirm → removes meal

3.12 Restaurant Guidance (re-homed)

Unchanged from v1. Surfaceable from Dashboard verdict CTA when context = eating out, and from Meals & Nutrition hub.

ELEMENT	TAP BEHAVIOR
Search restaurant	Filters curated list
Restaurant row	→ Restaurant Detail
Top 3 featured (when entered with macros context)	Each shows coach pick + macros immediately
Nearby toggle	If location not granted: greyed out with permission prompt on tap

3.13 Restaurant Detail (re-homed)

ELEMENT	TAP BEHAVIOR
Menu item row	Macros inline; tap chevron → Food Detail to log
"Coach pick" badge tap	Inline explanation of fit
Log this item	→ Food Detail prefilled

3.14 Recipe Browser (re-homed)

Default view leads with "For your remaining macros today."

ELEMENT	TAP BEHAVIOR
"For your remaining macros" section	Ranked recipes; tap → Recipe Detail
"Browse all" toggle	Switches to generic browse
Filter chips	Cuisine / time / difficulty

3.15 Recipe Detail (re-homed)

ELEMENT	TAP BEHAVIOR
Add to Grocery List	Appends missing ingredients → returns with toast
Log as meal	→ Food Detail with macros prefilled

ELEMENT	TAP BEHAVIOR
Save to favorites	Toggles favorite state

3.16 Meal Plan Generator (re-homed)

ELEMENT	TAP BEHAVIOR
Generate button	Calls AI → returns 3 plan options
Plan option card (×3)	Each has single-line summary; tap → Plan Detail
Accept this plan	Persists plan; auto-populates Grocery List
Regenerate	New 3 options (no user-facing counter, no gamification)

3.17 Grocery List (re-homed)

Grouped by category (Produce / Protein / Pantry / Dairy / Other).

ELEMENT	TAP BEHAVIOR
Checkbox	Marks item bought (strikethrough)
Item row long-press	Edit / delete
Add item (manual)	Inline text entry
Clear bought	Removes all checked items
Share	iOS share sheet (text export)

3.18 Macro History (new)

ELEMENT	TAP BEHAVIOR
Time range selector [Weekly/Monthly/90d/All]	Re-renders charts
Macro card (P/C/F)	Tap → full-screen detail for that macro
Day row in history list	→ that day's Meal Log

3.19 Coach Chat (re-homed)

Input placeholder: *"Ask me anything about today..."*

ELEMENT	TAP BEHAVIOR
Message input + send	Standard chat send
Inline Learn card	Expands inline; "Read full article" → Article Detail
"Log this meal" suggestion chip	→ Add Meal sheet preloaded

ELEMENT	TAP BEHAVIOR
Voice input mic	Speech-to-text fills the input
New conversation	Archives current thread

3.20 Exercise & Activity hub (new tab landing)

ELEMENT	TAP BEHAVIOR
Hero — Today's workout card	→ Workout Detail
Hero — Rest day card	→ Add a workout flow
Start workout button (when applicable)	→ Workout Detail with Active session pre-armed
Week-schedule day chip	→ that day's Workout Detail or Add workout
Quick access: Workout Log	→ Workout Log
Quick access: Activity Tracker	→ Activity Tracker
Quick access: Workout Plans	→ Workout Plans
Quick access: Exercise Library	→ Exercise Library
Quick access: Schedule	→ Schedule
Quick access: Trainer workouts	→ Free-form trainer workout entry
Recent workout row	→ Workout summary for that session

3.21 Workout Detail (re-homed + active session added)

Pre-workout state (planned but not started):

ELEMENT	TAP BEHAVIOR
Hero strip (name, exercises, est. time, est. kcal)	Decorative
Stat row (Volume / Sets / Est. time)	Decorative
Exercise row	Tap → Workout Set Logger sheet
Add exercise (+)	→ Free-form exercise entry
Week-schedule pill	→ switch day's plan
Sticky "Start workout" button	→ Active session (transitions screen state)

Active session state (Max's blocker resolved):

ELEMENT	TAP BEHAVIOR
Current exercise card (large)	Shows target sets × reps × weight

ELEMENT	TAP BEHAVIOR
Set logger (per row)	Increment/decrement weight, log reps complete, mark set done
Rest timer chip	Auto-starts after set logged; tappable to skip
"Next exercise" button	Advances to next exercise
Pause workout	Suspends timer; preserves state
End workout	Confirm sheet → Workout Summary screen

Workout Summary state (post-session):

ELEMENT	TAP BEHAVIOR
Hero stat (duration, total volume, kcal estimate)	Decorative
Per-exercise breakdown rows	Decorative
"How did that feel?" RPE selector	1-10 scale logs RPE
"Save and close"	Persists session → returns to Exercise & Activity hub
"Share"	iOS share sheet

3.22 Workout Log (new)

ELEMENT	TAP BEHAVIOR
Filter (date range / workout type)	Filters list
Workout row	→ Workout Summary for that session
Export	iOS share sheet (CSV / PDF)

3.23 Activity Tracker (new)

ELEMENT	TAP BEHAVIOR
Time range selector	Re-renders charts
Steps card	→ Steps detail
Active energy card	→ Active energy detail
Apple Health link row	→ System permissions sheet

3.24 Workout Plans (new)

ELEMENT	TAP BEHAVIOR
Plan card	→ Plan Detail

ELEMENT	TAP BEHAVIOR
Coach pick badge	Inline explainer
Build your own	→ Plan builder
Save plan	Stores to user's library

3.25 Exercise Library (new)

ELEMENT	TAP BEHAVIOR
Search bar	Filters list
Category filter	Body part / equipment
Exercise row	→ Exercise Detail (form notes, video placeholder)
Add to favorites	Heart toggle

3.26 Schedule (new)

ELEMENT	TAP BEHAVIOR
Week / Month toggle	Re-renders calendar
Day cell	→ that day's Workout Detail or Add workout
Add workout (+)	→ Plan picker → Workout Detail

3.27 Progress overview v2 (re-homed)

Default view: weekly.

ELEMENT	TAP BEHAVIOR
Time range [Weekly/Monthly/90d/All]	Re-renders
Health Score trend card	→ Health Score detail
Weight card	→ Weight history
Macro adherence card	→ Macro History
Body photos thumb	→ Photo viewer (swipe history)
Add Photo	→ Photo Capture sheet
Measurements row	→ Measurements detail
Add Measurement	→ Measurements Entry sheet
Mood/Energy card	→ Mood & energy history

ELEMENT	TAP BEHAVIOR
Log Mood	→ Mood Entry sheet
Habit Tracking card	→ Habit Tracking detail

3.28 Habit Tracking detail (re-homed)

ELEMENT	TAP BEHAVIOR
Full dot grid	Decorative (no celebratory chrome)
Habit row	Tap → toggle today's mark
Add / Edit habits	→ Habit editor sheet
Time-range selector	Weekly / 30-day / All

3.29 Article Detail (re-homed)

3-minute reads max. Every article ends with "One thing to try today" callout.

ELEMENT	TAP BEHAVIOR
Back chevron	Returns to Help or Coach Chat
Share	iOS share sheet
Save	Adds to Saved in Help
"One thing to try" CTA	Inline action (e.g. "Log this swap" → Add Meal)
Related article card	→ Article Detail

3.30 Settings (re-homed)

ELEMENT	TAP BEHAVIOR
Account	→ Account detail
Permissions	→ System permissions sheets
Notification preferences	Toggle list, quiet hours fixed 10pm-7am
Data export	→ Email export confirm
Sign out	→ Confirm → AuthCheck → Welcome (wipes local SQLite cache)

■ 4. Cross-cutting interaction rules (global)

RULE	BEHAVIOR
Back gesture	Standard iOS swipe-from-left-edge available on every pushed screen
Tab tap while on tab root	Scrolls to top
Tab tap on deep screen in same tab	Pops to tab root
Coach tab	Distinct visual treatment (speech-bubble icon, inverted shading) regardless of active state
Pull to refresh	Dashboard, Meal Log, Progress, Coach Chat
Offline mode	Read-only banner; write actions disabled with explanatory toast
Coach proactive push tap	Deep-links to the relevant screen
Onboarding skip	Only on permission steps (HealthKit, Notifications). System resurfaces the prompt contextually later (e.g. first Progress open prompts HealthKit).
Sign-out cache wipe	Local SQLite wiped before Welcome renders. Dev unit test required.
Daily Recap timezone	Triggers at 8pm local device time. Inherits future custom notification schedules.

■ 5. Resolved decisions (carried over from v1)

#	QUESTION	RESOLUTION
1	Dashboard verdict CTA pre-routes to a meal slot?	Yes — pre-routed to predicted next meal slot (or workout, if context = training).
2	Meal Plan auto-populates Grocery on Accept?	Yes — auto.
3	Sign-out wipes local SQLite cache?	Yes — wipe before Welcome renders. Dev unit test confirms.
4	Workout Detail active session in Pilot?	Yes — first-class feature (option a). Active session + rest timer + per-set logger + summary.
5	Photo default on Add Meal?	Yes — Photo is the default tab.
6	Weekly default on Progress?	Yes. Daily fluctuation noise is discouraging.

■ 6. Status

- [x] Updated to App Map v2 (2026-05-19)
- [x] All Max's Step 2 blockers addressed (Tier 1/2/3 · Health Score formula · Workout active session · Empty states · Daily Recap timezone)
- [] Sign-off in `decisions.md`

Output of Phase 0.5 · Step 2 v2. Next: Step 4 Round 2 — Mockups for the 10 new screens, then compile combined review PDF.

Mockup Deck

37 mockups, organized by tab. Round 1 (Screens 01–27) are the v1-approved Claude Design outputs, re-homed under the new IA. Round 2 (marked NEW) are the 10 new screens for App Map v2.

TAB SECTION

Onboarding (Round 1 — re-homed)

Nine-step entry flow preserved verbatim from v1. No changes; the screens carry forward intact.

- 01 Welcome
- 02 Sign in / Sign up
- 03 Goal selection
- 04 Body baseline
- 05 Dietary constraints
- 06 Lifestyle
- 07 HealthKit permission
- 08 Notification permission
- 09 Your Plan reveal

TAB SECTION

Home tab

Dashboard v2 with Tier 1/2/3 framework and the new Inflows/Outflows visualization. Daily Recap, Health Score detail, and Habit Tracking detail are reachable from here and from the new Menu.

- | | | |
|----|-------------------------------------|-----|
| 10 | Dashboard v2 (Tier 1/2/3) | NEW |

NEW

Welcome

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M01 Onboarding — Welcome

Hero redo (round 3). Literal, recognizable food at a glance — visible greens, grains, tomato, citrus. Premium editorial lighting and depth, but never abstract plating. Wordmark + CTA hierarchy locked.

iPhone 15 Pro - 393 x 852 pt
Light - color.bg.surface #FFFFFFF
Recognizable food photography

VARIATION 01

Grain bowl · overhead on linen

Top-down grain bowl: visible quinoa base, kale leaves, avocado wedges, cherry tomato halves, chickpeas. Warm linen surface.

VARIATION 02

Garden salad · white plate

Crisp green salad with romaine leaves, cucumber slices, cherry tomatoes, red onion, and a lemon wedge. Cool marble surface.

VARIATION 03

Buddha bowl · sectioned

Sectioned plate: roasted sweet potato, salmon, quinoa, broccoli, kale, avocado wedges. Walnut board. Most editorial of the three.

MOCKUP NOTES · HERO REDO (ROUND 3)

V1 GRAIN BOWL

Overhead shot, warm linen surface, white ceramic bowl over a quinoa base. Visible ingredients: **kale leaves** (four), **cherry tomato halves** (three), **avocado wedges** (two with score marks), **chickpeas** (five), sesame seeds and chopped herb garnish. Wooden spoon edge bottom-right. Top-light highlight on the rim.

V2 GARDEN SALAD

Overhead shot, white marble with subtle veining, white ceramic plate. Visible ingredients: **romaine + dark leaves** (six), **cucumber slices** with seed pattern (three), **cherry tomato halves** (three), **red onion rings** (two), **lemon wedge** with rind segments, microgreens, olive-oil drizzle highlights.

V3 BUDDHA BOWL

Overhead shot, walnut wood board with grain and knots, white ceramic bowl, quinoa base. Sectioned ingredients: **salmon fillet** (top, with flesh lines + dill), **roasted sweet potato cubes** (right), **broccoli florets** (bottom-right, three clusters with stems), **kale** (bottom-left), **avocado wedges** (left, with score marks), lemon wedge corner, sesame seeds, microgreens.

LIGHTING

Top-light highlight on every bowl rim, soft drop shadow beneath, vignette overlay (22-34% alpha) at the edges. Reads as editorial photography rather than flat illustration.

WORDMARK + CTA

Identical across all three. **Outfit** 700 36pt at -0.025em; gradient.brand CTA at 48pt with elevation.cta halo; Inter 500 secondary link. Brand-green appears only in the gradient.

Sign in / Sign up

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M02 Onboarding — Sign in / Create account

Promoted from approved wireframe § 3.2 V1 (Apple-led stack). Three state variations: empty, mid-entry with keyboard, and an authentication error. Continue button switches from disabled-dark to gradient-brand only when the form is valid.

iPhone 15 Pro - 393 x 852 pt
Light - color, bg, base #F4F5F7
Apple Sign-In above the "or" divider

variation 01 · STATE

Default · empty

First load. Both fields empty. Continue stays in disabled-dark secondary style until the form validates.

variation 02 · STATE

Mid-entry · keyboard up

Email entered, password focused. Field shows the info-blue focus ring; iOS keyboard occupies the bottom half.

variation 03 · STATE

Valid · ready

Both fields valid. Continue button switches to gradient-brand with the elevation.cta halo. Returning-user flow.

MOCKUP NOTES · STEP 4

APPLE SIGN-IN

Solid black #000, 48pt tall, radius.md, 12px. White SF logo + "Continue with Apple" in San Francisco 600 17pt per Apple HIG. Sits above the "or" divider on every state — primacy locked from wireframe.

CONTINUE BUTTON STATES

V1 disabled: dark secondary fill (color.text.primary, background at 0.45 opacity) — communicates that the affordance exists but isn't active. **V3 enabled:** switches to gradient.brand, with the elevation.cta green halo. Same 48pt height, same position — only the fill changes.

FIELD STATES

Default: 52pt tall, white surface, 1pt color.bg.border, radius.md, Inter 500 16pt. **Focused (V2 password):** border switches to color.semantic.info #00B4D8 with a 3pt 14%-alpha ring. **Error (component spec):** red border + red ring + 12pt error message below.

IOS KEYBOARD

V2 shows the password field focused with the system QWERTY keyboard up. Status bar stays black-on-light per iOS. Title block compresses (subtitle drops) and the form sits above the keyboard — no overlap.

VOICE

H1: "Welcome back to your numbers." — direct, specific, claims the brand frame. Subtitle: "Sign in to pick up where your last log left off — or create a new account if you're fresh." No banned vocabulary.

TYPE STACK

H1 in Outfit 700 28pt -0.022em. Subtitle in Inter 400 15pt. Field input in Inter 500 16pt. Continue + Forgot in Inter 17/14pt. Apple button stays on the system font per Apple HIG.

FORGOT PASSWORD

Inter 500 14pt, color.text.secondary. The underline lives on the action word "Forgot password?" only, not the whole row. Sits 16pt below Continue on every state.

Goal selection

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M03 Onboarding — Goal selection

Promoted from approved wireframe § 3.3 V1 (stacked cards, icon left). Three state variations: default empty (CTA disabled-dark), Lose-weight selected, and Maintain-weight selected. Cards use radius.lg, 1pt hairline + elevation.1; selected state picks up the semantic-success border and a 5% on-track tint.

iPhone 15 Pro · 393 × 852 pt
Light · color.bg.Base: #FAF5F7
Progress: 3 of 9

VARIATION 01 · STATE

Default · empty

First load. No goal chosen. Continue stays in the disabled-dark secondary style until the user picks.

VARIATION 02 · STATE

Selected · Lose weight

First card tapped. Border switches to semantic-success at full saturation, 5% on-track tint fills the card, and the Continue CTA flips to gradient.brand.

VARIATION 03 · STATE

Selected · Maintain weight

Middle slot selected — shows that selection logic and chrome are identical for every option regardless of position; CTA stays primed.

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Nine 7pt dots centered in the 44pt nav row. Three filled `color.text.primary #0A0A0F`, six empty `color.text.disabled #C7CCD3`. Back chevron sits left; right cell is a spacer so dots remain optically centered to the device.

TITLE BLOCK

H1 in **Outfit 700** 28pt @ 0.022em — `text.title.lg`. Subtitle in **Inter** 400 16pt `color.text.secondary`. Real screen copy: "What's your goal?" / "We'll tune your plan around it." — no banned vocabulary.

GOAL CARD · DEFAULT

White surface, `radius.lg` 20pt, 1pt `color.bg.border` hairline, `elevation.1` 16pt internal padding. Stacked with 12pt gaps. Cards are 16pt off the screen edges.

GOAL CARD · SELECTED

Border switches to 1.5pt `color.semantic.success #00D27B`. Fill becomes the `rgba(0,210,120,.05)` on-track tint — close to the calorie-ring vocabulary the user will meet on the dashboard. Radio fills with the same green.

ICON CONTAINERS

48 × 40pt tinted square, 10pt corner. Background uses the icon's semantic color at 10% alpha; the SF Symbol stroke takes the full-saturation hue. Original FuelWell artwork drawn to SF-Symbol-equivalent geometry — not lifted from the system library.

`fatpremium` · #A055F7 @ 10% `info` · #00B4D8 @ 10% `success` · #00D27B @ 10%

GOAL COPY

Real app copy, not wireframe placeholders. **Lose weight** — "Calorie deficit with a high-protein floor." **Maintain weight** — "Hold your current weight, lock in habits." **Gain weight** — "Lean surplus with progressive intake." One line each; `text.body.sm` 14pt secondary color.

HELPER · PREMIUM GATE

`text.caption` 12pt `color.text.muted`. A small lock glyph in `color.semantic.premium #A055F7` sits before the line — the only chrome that hints at Premium without turning into an upsell. No modal, no chip, no badge.

CONTINUE · TWO STATES

Disabled (V1): dark secondary fill (`color.text.primary` @ 0.42 opacity) — affordance present but inert. **Enabled (V2/V3)**: `gradient.brand` with the `elevation.cta` green halo. Same 48pt height, `radius.md` 12pt, Inter 600 17pt — same position in the dock.

STICKY CTA DOCK

Anchored to the bottom 34pt above the home indicator. A 2pt top fade to `bg.base` prevents the cards from butting flush into the button when content extends. CTA never scrolls.

Body baseline

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M04 Onboarding — Body baseline

Promoted from approved wireframe § 3.4 V1 (traditional stacked form). Three state variations cover the data-entry lifecycle: empty default with picker-style affordances, the height wheel-picker sheet mid-entry, and the fully-populated state with Activity "Moderate" selected and the Continue CTA primed.

iPhone 15 Pro - 393 × 852 pt
Light - color.bg.base #F4F5F7
Progress - 4 of 9

VARIATION 01 · STATE

Default · empty

First load. Segmented controls show ft/in + lb as defaults; values empty; sex unset; no activity selected. Continue stays disabled-dark until all five fields validate.

VARIATION 02 · STATE

Height picker · open

User tapped the Height row; bottom sheet rises with the dual-spinner wheel. Feet wheel on 5, inches wheel on 10. Cancel returns, Done commits to the row chip.

VARIATION 03 · STATE

All filled · ready

Scroll position lower in the form. All five fields populated, Activity "Moderate" selected, and the Continue CTA flips to gradient.brand. Sex shows the Female active state with the inverted dark capsule.

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Four of nine filled — `color.text.primary #0A0A0F` for filled, `color.text.disabled #C7CCD3` for empty. Centered in the 44pt nav row with the back chevron left-aligned.

TITLE BLOCK

"Tell us about you" in `Outfit 700` 26pt, -0.022em. Subtitle: "Five quick numbers — we'll set your starting calories and macros from these." Specific, no banned vocabulary, sets expectations on input volume.

SEGMENTED CONTROL

Per spec: inactive cells use `color.bg.surface` (white) on a `color.bg.borderSoft` track with a 1pt hairline; active cell switches to `color.bg.elevated #0F1117` with `color.text.onDark` white text at Inter 600. Same control reused for unit selectors (ft/in vs cm, lb vs kg) and Sex (3-way). Track is `radius.md`; cells round to `radius.sm` inside.

NUMERIC CHIPS

Height + Weight value entry sits in a 56pt picker-style chip: `DM Sans 600` 28pt with tabular figures + a `Inter 500` 13pt uppercase unit label. Dashed border in the empty state (placeholder visible), solid + `elevation.1` when filled. Tapping the chip opens the wheel picker sheet (V2).

WHEEL PICKER SHEET

Bottom sheet at `radius.lg` 18pt top corners with a 36 × 5pt grabber, Cancel / Title / Done header row, then a 216pt dual-column wheel. Center row gets full-saturation text + the iOS hairline-bordered selection band; neighbors fall to `color.text.muted` and tilt via perspective transform. Done is in `color.semantic.success` green — only place green appears in the chrome.

AGE FIELD

Single 56pt field, opens the iOS numeric keyboard on tap. Empty placeholder reads "Age in years"; filled state shows the value in `DM Sans 600` 24pt with "years" right-aligned in `color.text.secondary`.

ACTIVITY ROWS

Four white cards, `radius.md` 8pt gaps. Real copy from spec: Sedentary "Desk, little movement", Light "1-3x / wk", Moderate "3-5x / wk", Very active "6+x / wk". Selected state mirrors M03 — 1.5pt `color.semantic.success` border, 5% on-track tint, filled radio. No hierarchy collapse; all four rows present at all times.

CONTINUE · TWO STATES

Disabled (V1): dark secondary fill (`color.text.primary` @ 0.42 opacity) — affordance present but inert. **Enabled (V3):** `gradient.brand` with the `elevation.cta` green halo. Same 48pt height, `radius.md` 12pt — only the fill and shadow change.

SCROLL

Form scrolls inside the device frame; CTA dock stays pinned with a 28pt fade to `bg.base` so content doesn't butt flush into the button. V1 shows scroll position at top; V3 shows it lower so Activity selection + CTA are visible together.

Dietary constraints

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M05 Onboarding — Dietary constraints

Promoted from approved wireframe § 3.5 V1 (chip rows + free text). Three state variations cover the optional-input lifecycle: empty default with the skip path foregrounded, mid-entry with chips selected and the free-text caret active over the iOS keyboard, and the fully-populated state with Continue primed.

iPhone 15 Pro · 393 × 852 pt
Light · color.bg.base: #F4F5F7
Progress · 5 of 9

VARIATION 01 · STATE

Default · empty

First render. No chips selected, free-text shows placeholder, Continue sits in the dim state because no constraints were committed. Skip is fully primed beneath.

VARIATION 02 · STATE

Selecting · keyboard up

User tapped Peanuts and Dairy in the Allergies row, Mushrooms in Dislikes, then opened the free-text field. iOS keyboard slides in over the CTA dock; predictive strip highlights "no red meat".

VARIATION 03 · STATE

Filled · ready

Constraints committed. Three allergies, two dislikes, free-text holds a real long-tail rule. Continue flips to gradient.brand with the green halo; Skip remains beneath the CTA for symmetry but loses gravity.

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Five of nine filled — `color.text.primary #0A0A0F` for filled, `color.text.disabled #C7CCD3` for empty. Same 44pt nav row as M03 / M04.

TITLE BLOCK

"Anything we should avoid?" in `Outfit 700` 26pt, -0.022em. Subtitle: "Optional — you can change this later." The "OPTIONAL" eyebrow caplet sits above the title in the muted track to reinforce that Skip is a first-class path, not a back-door.

CHIP · DEFAULT

Pill (`radius.pill`) on `color.bg.surface`, 1pt `color.bg.border`, `elevation.1`. Label is `Inter 500` 14pt at `color.text.body`, height 36pt, horizontal padding 14pt. Chips wrap across rows — every option is visible without horizontal scroll on the 393pt frame.

CHIP · SELECTED

Per spec — fill flips to `color.bg.elevated #0F1117`, label to `color.text.onDark`, weight to 600. A small 14pt × glyph appears on the right at 70% white to make the de-select target unambiguous. No green tint: selection here is a constraint, not a positive verdict.

CHIP · ADD

Dashed 1pt outline at `color.text.secondary`, transparent fill, no shadow. "+" leads the label. Tapping opens an inline text input that appends a custom chip to the row in the same selected style.

FREE TEXT · "ANYTHING ELSE?"

Multiline field, white surface, 1pt border, `radius.md`, three lines of breathing room (—92pt minimum). Placeholder: "e.g. no red meat after 8pm, low FODMAP, halal" at `color.text.muted`. Focused state (V2) bumps the border to `color.text.primary` with a 3pt soft halo and the caret blinks at the insertion point. Helper text below reminds users this goes to the plan engine verbatim.

CONTINUE · ALWAYS ENABLED

This screen is optional — Continue is never disabled. V1 shows the "dim" state (`color.text.primary` @ 88% opacity, no halo) — full affordance, low gravity, because no selections were made. V3 shows the "enabled" state — `gradient.brand` + `elevation.cta` — because the user has expressed constraints worth committing.

SKIP FOR NOW

Text link in `color.text.secondary`, directly under the CTA, `Inter 500` 14pt. Continues to 3.6 Lifestyle with no constraints recorded. The plan engine treats Skip as "no known restrictions" and ranks everything.

IOS KEYBOARD (V2)

Standard QWERTY at `#01D40B` tray with predictive-text strip showing "no red meat" highlighted. CTA dock hides behind the keyboard while focus is on the free-text field — Return commits and the dock re-emerges.

Lifestyle

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

M06 Onboarding — Lifestyle

Promoted from approved wireframe § 3.6 V1 (stacked cards, icon left). Same card chrome as Goal selection — radius.lg, 1pt hairline, elevation.1; selected state picks up the semantic-success border and a 5% on-track tint. Three state variations; empty default, "Cook at home mostly" selected, "Both equally" selected.

iPhone 15 Pro - 393 × 852 pt
Light - color.bg.base #F4F5F7
Progress - 6 of 9

variation 01 · STATE

Default · empty

First render. No option chosen; Continue remains in the disabled-dark style until the user commits.

variation 02 · STATE

"Cook at home mostly" selected

Recipe-biased lifestyle. Coach will lean toward home-cookable suggestions when the engine ranks meals.

variation 03 · STATE

"Both equally" selected

Balanced ranking. Engine weights restaurants and recipes 50/50. Same chrome — only the success-border and radio fill move.

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Six of nine filled — `color.text.primary` for filled, `color.text.disabled` for empty. Centered in the 44pt nav row.

TITLE BLOCK

"How do you usually eat?" in `Outfit 700` 28pt, -0.022em. Subtitle: "We'll tailor your suggestions." — single sentence, plain promise, no hedging.

CARDS - DEFAULT

White `color.bg.surface`, 1pt `color.bg.border` hairline, `radius.lg` 20pt, `elevation.1`. Padding 16pt. Title `Inter 600` 18pt, description `Inter 400` 14pt at `color.text.secondary`. 22pt empty radio on the right.

CARDS - SELECTED

1.5pt `color.semantic.success` border + 5% tinted background `rgba(0,210,120,.05)`. Radio fills with the success green. Same chrome as M03 — selection is unambiguous and reads as a positive commit.

ICON SQUARES

40pt rounded squares (`radius.md` minus 2pt) holding the SF Symbol at full saturation. Background is the same hue at 10% alpha to keep the row weight balanced against the text column:
• `house.fill` on `color.semantic.success` green — "Cook at home mostly"
• `fork.knife` on `color.primary.orange` — "Eat out mostly"
• `circle.grid.2x2.fill` on `color.semantic.info` blue — "Both equally"

DESCRIPTIONS

Each card carries one specific sentence about the engine bias — "Lean toward recipes when ranking meals.", "Lean toward restaurants when ranking meals.", "Balance recipes and restaurants evenly." Real copy, no banned vocabulary, ties the lifestyle choice to a concrete downstream effect.

HELPER LINE

Below the stack: "You can change this any time in Settings." 12pt `color.text.muted` with a small SF `info.circle` leading glyph. Sets reversibility expectation without weakening the commit.

CONTINUE - TWO STATES

Disabled (V1): `color.text.primary` @ 0.42 opacity — affordance present, low gravity. Enabled (V2 / V3): `gradient.brand` with `elevation.cta` green halo. Same 48pt height, `radius.md` — only fill + shadow change.

HealthKit permission

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M07 Onboarding — HealthKit permission

Promoted from approved wireframe § 3.7 V1 (clinical bullet list — most informationally explicit). Three states cover the consent lifecycle: pre-permission explainer, the iOS HealthKit system sheet rising on Continue tap, and the post-grant success state with the first real values from Health filled into the row tags.

iPhone 15 Pro · 393 × 852 pt
Light · color.bg.base #F4F5F7
Progress · 7 of 9

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Seven of nine filled. Nav row matches M03-M06.

HERO

92pt rounded square (radius.x1 26pt) on white with a 1pt hairline and elevation.2. Holds Apple Health's red heart at full saturation — that color is fixed by convention even inside our light system (see color.semantic.error note in DESIGN.md). A 32pt badge in the corner carries the linking glyph (V1 / V2) or the brand-green check (V3) so the hero doubles as the success affordance.

TITLE BLOCK

"Connect Apple Health" in Outfit 700 26pt, centered. Subtitle: "We read four metrics to keep your plan accurate — never written back, never leaves your device." The "read" bold pulls the contractual word forward in the otherwise muted body color.

METRIC ROWS

Single white card, radius.lg, with four rows separated by color.bg.borderSoft hairlines. Each row carries a 34pt tinted icon square, the metric name in Inter 600 15pt, a one-line why in color.text.secondary 12.5pt, and a "READ" pill on the right. The pill flips to a green "CONNECTED" affirmation + the last-synced value once HealthKit returns data (V3) — the row reads as both contract and live data source.

TRUST STRIP

Below the metric card: a single-line claim with a lock glyph — "Read-only. Stays on your device. No third parties." The lock is rendered in color.text.primary on a 6% neutral wash so it doesn't compete with the hero color for attention.

PRIMARY CTA · ALWAYS ENABLED

Permission screens never disable Continue — the user must always be able to advance. V1 reads "Connect Apple Health" with the heart icon to telegraph the next sheet; V3 flips to "Continue" once permission has resolved. Skip-for-now sits beneath the CTA in color.text.secondary and advances to 3.8 with all metrics manual.

IOS HEALTHKIT SHEET · V2

Native-system mock: rounded-top tray on a scrim, FuelWell app glyph at the top, "FuelWell Would Like To Access Your Health Data" in SF Pro 17 bold, four data categories listed below an "Allow 'FuelWell' to read data" label, each with the iOS green switch in the on position. Bottom carries "Don't Allow" / "Allow" buttons — matches Apple HIG exactly. Status-bar time stays at 9:41 as our content underneath dims into the scrim.

SUCCESS · V3

Hero gains a green halo + a gradient.brand checkmark badge. Each metric row now shows its real value: 178.4 lb, 8,432 steps, 3 sessions, 412 kcal in DM Sans 600 tabular — first real numbers the user sees in the app. CTA reads "Continue" — flow advances to 3.8 Notifications.

Notification permission

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M08 Onboarding — Notification permission

Promoted from approved wireframe § 3.8 V1 (clinical bullet list — mirrors 3.7's family for explicit explainers). Three states cover the one-shot push consent: pre-permission explainer, the iOS system alert mid-prompt, and a post-grant lock-screen preview showing a real coach notification.

iPhone 15 Pro · 893 × 852 pt
Light · color, bg, base: #F4F5F7
Progress: 8 of 9

VARIATION 01 · STATE

Pre-permission · explainer

First render. Bell hero with pulse rings, quiet-hours promise pill, four trigger rows naming exactly what we'll send. CTA + Skip beneath.

VARIATION 02 · STATE

iOS system alert · prompting

User tapped Enable. The iOS push permission alert appears center-screen on the scrim. Our explainer dims behind. Don't Allow / Allow — Allow is the right-side default.

VARIATION 03 · STATE

Allowed · lock-screen preview

User tapped Allow. The flow holds for one beat on a preview of what the user just signed up for — a real “You skipped lunch” coach push on the iOS lock screen. Continue moves to 3.9 Plan reveal.

MOCKUP NOTES · STEP 4

PROGRESS DOTS

Eight of nine filled. Final onboarding step before plan reveal (3.9).

HERO

92pt rounded square (radius.xl) on white with two faint (color.semantic.info) pulse rings to telegraph “this is the notification screen.” Bell glyph in info-blue at full saturation — neutral, non-celebratory color per DESIGN.md “Anti-patterns”.

TITLE BLOCK

“Let your coach reach you.” in Outfit 700 26pt, centered. Subtitle: “Event-driven only. We send when something on your plan changes — never on a schedule, never to upsell.”

QUIET-HOURS PROMISE PILL

Centered below the subtitle, a single pill on white with a moon glyph and the time range “10:00 PM – 7:00 AM”. Hard-coded at Pilot per the wireframe spec — surfaced as a promise, not a setting. Settings exposes it read-only.

TRIGGER ROWS

Four-row card on white, (radius.lg), with the same anatomy as M07's metric rows. Each row carries a tinted SF-Symbol icon, a trigger name in Inter 600 15pt, and a one-line consequence in (color.text.secondary): meal skipped → warning; macros over → error; missed workout → info-blue; weight off plan → purple. Colors are tonal, not categorical — they hint at the kind of nudge without being a verdict.

CTA — ALWAYS ENABLED

“Enable Notifications” with the bell glyph. Permission screens never disable the primary action; the iOS alert on tap is the one shot we get. Skip-far-now in (color.text.secondary) beneath — advances to 3.9 without firing the system prompt; user can recover later in Settings → Notifications (capped by the OS-level setting).

IOS SYSTEM ALERT · V2

Native iOS alert dialog — 270pt-wide rounded card with 92% white blur, “FuelWell” Would Like to Send You Notifications” in SF 17 semibold, subtitle “Notifications may include alerts, sounds, and icon badges. These can be configured in Settings.” in SF 13. Two-column buttons — “Don't Allow” / “Allow” — bottom-right is the default per Apple HIG so we render it in 600.

LOCK-SCREEN PREVIEW · V3

After tap-Allow, the device transitions to a dark gradient lock-screen mock with the iOS native clock (Sunday · 12:38) and two stacked notification banners — the first is the real “You skipped lunch” coach push, the second is a softened second-priority example. iOS-native rounded blur-bg, 0.5pt white border, the FuelWell gradient app glyph at 22pt. Bottom of frame fades to a “Notifications enabled — continue” label + dark Continue CTA so the flow keeps moving.

VERDICT

No verdict surface yet — engine still has no plan. Reveal is 3.9.

Your Plan reveal

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

M09 Onboarding — Your Plan reveal

Promoted from approved wireframe § 3.9 V1 (2x2 number grid hero — egalitarian, all four targets at equal weight). Three states cover the payoff lifecycle: computing while the engine resolves the user's inputs, plan revealed with the why-this-plan expander collapsed, and the expander open with the full rationale + assumption chips. No back chevron per spec — the plan is committed.

iPhone 15 Pro · 393 × 852 pt
Light · color.bg.base #F4F5F7
Progress · 6 of 8

MOCKUP NOTES · STEP 4

THE MAGIC MOMENT

Per Max's review: payoff, not confirmation. No celebratory chrome — no confetti, no streak, no haptic success burst. The reveal earns weight from the numbers + a single gradient.text headline phrase. DESIGN.md anti-pattern: "FuelWell rewards with information, not vibration."

PROGRESS DOTS

Nine of nine filled. All steps done. No back chevron — the plan is committed and edits live in 3.23 Your Plan / Profile.

TITLE BLOCK

Eye brow "PLAN READY" with a small success-green pulse dot, then **Outfit 700** 30pt headline "Your plan, live now." — the second clause picks up `gradient.text` (#00D278 → #00B4D8) per DESIGN.md, the only place gradient-text appears in onboarding. Subtitle below: "Calibrated to your inputs. We'll recalibrate as your body and life change."

HERO GRID

Single bordered hero card, `radius.xl` 28pt, with a 1.5pt `color.semantic.success` stroke and a soft green-tinted drop shadow — the only "celebratory" affordance. 2x2 grid: **Calories** top-left (kcal slightly larger at 48pt), **Protein** top-right, **Carbs** bottom-left, **Fat** bottom-right. Each cell carries a 10pt swatch matching the macro token (`color.macro.protein/carbs/fat`) introducing the color vocabulary the Dashboard will reuse. Numbers in **DM Sans** 600 42pt tabular figures, unit caplet underneath.

NUMBERS

Computed for 32-yr-old female, 158 lb, moderate activity, maintain (the inputs we showed in M03 & M04): **2,260 kcal** · **160 g protein** · **245 g carbs** · **70 g fat**. Round numbers, no hedging — the engine commits.

WHY-THIS-PAN EXPANDER

Critical per Max — never cut. Single card below the grid with an info-circle glyph in info-blue, "Why this plan" label, chev right. Tapping reveals a four-sentence rationale + a row of assumption chips (Maintain · Moderate · 158 lb · 32 yr · Female · Light dietary constraints). Tapping a chip in the real app drills into the editor; here they're surfaced as the data foundation behind the numbers.

PRIMARY CTA

"Start tracking" — 52pt tall (taller than other onboarding CTAs to telegraph this is the terminal step), `gradient.brand` + `elevation.cta` halo, right-arrow glyph trailing. V1 (computing) shows the disabled-dim variant since the plan isn't ready yet.

COMPUTING STATE · V1

Hero grid renders as four shimmer skeletons while the engine resolves. A single "Computing your plan..." strap sits below with a green spinner and the running subtitle "Resolving 5 inputs · 2 constraints · activity level", 1.2s typical resolution time in spec; visible loader to telegraph the work being done.

HOOKS · DASHBOARD 3.10

The macro swatches and number format introduced here are the same vocabulary the dashboard ring + macro rows will use — establishes the visual contract on the first surface, so the dashboard reads as continuity rather than a fresh layout.

Dashboard v2 (Tier 1/2/3)

NEW

10 / 37

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M28 Dashboard v2 · Tiered Home root

Promoted from M10 with Max's Tier 1/2/3 framework. Above the fold: **Health Score** hero + **Inflows/Outflows** dual concentric ring + **verdict-of-the-moment** CTA. Tab bar v2 features **Coach** as a raised speech-bubble — prominent regardless of active state. **Habit Tracking** is removed from this screen (lives in Menu and on Progress tab). **FOLD** line marks the 852pt viewport edge.

iPhone 15 Pro · 393 × 862 pt
Light · color: bg-base #FAF9F7
Frame extended to show Tier 2/3 below fold
Tab · Home

VARIATION 01 · STATE

Mid-day · on track

Friday 3:42 PM. Health Score 86.4, +4.2 over 30 days. Ring shows in-range macros against partial-day expenditure. Verdict promotes the dinner log. Tier 3 is quiet (no recap yet, no nudge fired).

VARIATION 02 · STATE

Evening · caution + Tier 3 active

Friday 8:14 PM. Outer ring overshoots; balance pill flips to "Over by 186 kcal" error. Daily Recap unlocked. Coach nudges fire with a tomorrow-breakfast swap. Coach tab uses the alternate gradient.brand bubble.

VARIATION 03 · STATE

Day 1 · post-onboarding empty

First open after plan reveal. Score replaced by dashed placeholder ring + "Building your baseline" copy. Dual ring becomes a tapable + center. Tier 2 cards are muted placeholders. Tier 3 collapses to a single message.

MOCKUP NOTES · M28 DASHBOARD V2

TOP BAR V2

Three-up: hamburger menu (left) opens the full nav drawer (Habit Tracking lives here now), compact **FuelWell** wordmark center with a today-stamp, help icon (right). No avatar in the bar — avatar moves into the menu drawer.

TIER 1 · HEALTH SCORE HERO

White card, elev2, radius, Eyebrow **HEALTH SCORE**. Massive DM Sans 700 score at 60pt (e.g. 86.4). Right-side composite breakdown stacks the five components in DESIGN order: Nutrition 35%, Training 25%, Sleep 20%, Recovery 10%, Body comp 10% — each as a percentage fill so the user can see at a glance which pillar is dragging the average. Delta pill below the score (e.g. +4.2 last 30d) and a **Why?** link in color.semantic.info to the explainer sheet (M26). Day-1 fallback swaps the score for a 92pt dashed placeholder ring and the coach copy: *Building your baseline* — 7 days of data unlocks your Health Score.

TIER 1 · INFLOWS/OUTFLOWS DUAL RING

Centerpiece, white card, radius, 200pt SVG with two concentric rings. **Outer ring** = calories ingested, segmented by macro (protein #000278, carbs #F9603E, fat #A859F7). **Inner ring** = calories expended, segmented by source (BMR #6B72B0, activity #00B40E, workout #E87A2D). Centered, net kcal in DM Sans 700 30pt with a directional arrow chip (success-green for deficit, warning-amber for surplus). Balance pill beneath: **In range** (success), **Slight surplus** (warning), **Over by X kcal** (error). Tap "Expand" — opens M30 Sankey full-screen view. Empty state replaces the center with a tapable + circle and the copy *Log your first meal*.

TIER 1 · VERDICT CTA

The decision-engine surface, identical pattern from M10 but compressed (19pt headline vs 22pt) since two visual blocks sit above it now. Inverted color.bg.elevated surface with verdict-tier radial wash and pulsing eyebrow dot.

FOLD MARKER

Dashed full-width hairline at the 852pt mark — the actual viewport bottom. Everything above is Tier 1 (must-see, never below). Everything below requires scroll.

TIER 2 · ROW OF TWO + DWM

Activity overview (steps + small step-bars sparkline + active minutes), Nutrition overview (kcal logged + 3-row macro micro-bars). Below them, a "My day / week / month" segmented control feeding a 7-bar stacked chart of intake vs expenditure across the selected window.

TIER 3 · PROGRESSIVE DISCLOSURE

Progress overview (one-line trend + 110pt weight sparkline) — always visible. Daily Recap (COACH RECAP · 8 PM) — visible only after 8pm; Variation 2 shows it active. Variation 1 hides it. Coach nudge — event-driven; absent in V1, present in V2 (caution swap suggestion). All three slots collapse to nothing on Day-1.

TAB BAR V2 (COACH SPEECH-BUBBLE)

Five-tab order: **Home** · **Meals** · **Coach** · **Exercise** · **Progress**. Coach is the visual focal point — its icon sits in a 52pt color.bg.elevated speech bubble container raised 16pt above the row, with a tiny tailnitch at the bottom-left. Coach retains its distinct shading even when not the active tab. Variations 1 & 3 use the dark #0F1117 bubble. Variation 2 uses the alternate gradient.brand bubble per the Round-2 spec ("dark fill OR soft gradient.brand"). Active tab text in color.text.primary, inactive in color.text.muted.

Inflows / Outflows widget

NEW

11 / 37

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M29 Inflows / Outflows · Dashboard widget

Standalone study of the dual concentric ring widget at the size it appears on M28 Dashboard v2. Thin Tier 1 siblings (Health Score above, Verdict below) are dimmed so the widget reads as the focus of the frame. The widget itself is the tap target → opens M30 Energy balance full-screen.

iPhone 15 Pro · 393 × 852 pt
Light · color: lg_base #F4F4F7
Focus · M28 widget · 200-240pt ring

variation 01

Full dual ring

As specified — outer macro intake + inner expenditure source rings. Full legend strip stacks IN / OUT rows beneath 240pt overall.

variation 02

Compact · outer ring + mini-bar

Outer macro ring alone (thickened 18pt for emphasis), with expenditure broken out as a 12pt segmented mini-bar card below — same color logic, lower pixel cost. 220pt ring.

variation 03

Dense · big number, inline legend

Ring shrinks to 200pt to make room for a two-column legend pulled inline at the right. Center net number jumps to 54pt — most prominent number on the dashboard. Tightest vertical footprint.

variation 01 · EMPTY

Day 1 · zero logged

Outer + inner ring collapse to a single dashed track. Center reads 0 kcal logged today, replaced by the primary + Log first meal button. Card tap still routes to M30 (empty there too).

variation 02 · EMPTY

Compact · zero logged

Mini-bar drops out, just the dashed ring and the empty CTA.

variation 03 · EMPTY

Dense · zero logged

Ring goes dashed, the inline column carries the CTA and a short coach-voice nudge.

MOCKUP NOTES · M29 WIDGET STUDIES

EYEBROW & TIME WINDOW

ENERGY BALANCE · TODAY in body 700 caption, secondary color. Below it a 4-segment pill row [Today][Week][Month][Year] in lg_base, with the active selection in **bold** primary (inverted chip). Window switches scoped to the widget — full-screen view (M30) inherits this state on tap.

OUTER RING · INGESTED

16pt stroke. Three macro arcs in canon colors: protein #00D278, carbs #F56E08, fat #A855F7. Round line-caps render the tiny end-dots automatically. A faint **light** (5.27, 23.0, 0.6) track underneath holds the ring shape when arcs don't fill the circle.

INNER RING · EXPENDED

10pt stroke (lighter weight to subordinate to intake). Three source arcs: BMR #E87290, activity #00B4AD, workout #E87A1D. BMR is always the largest band by definition — it sets the eye's baseline for "how much you'll burn just existing".

CENTER

Massive DM Sans 700 net number with a signed prefix (+128, -320) at 44pt (V1), 40pt (V2 compact), 54pt (V3 dense). Below: kcal unit caption. Arrow chip: success-tinted circle with **arrow** down, right: for deficit, warning-tinted circle with **arrow** up, right: for surplus.

BALANCE PILL

Left-aligned beneath the ring. In range at success-10% / success-text, Slight surplus at warning. Over by X kcal at error. Border at 32% alpha, text at full saturation.

LEGEND STRIP

V1 stacks two rows (In / Out) of three switch+value chips. V2 swaps the inner ring for a 12pt segmented mini-bar (expenditure summary in fewer pixels). V3 pulls the legend to the right of the ring, two-column.

EMPTY STATE

Ring collapses to a single dashed track. Center renders 0 kcal logged today in muted disabled color, with a primary + Log first meal. CTA. Tapping the card opens the same M30 destination — empty state there.

Energy balance · Sankey full screen

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M30 Energy balance · full-screen Sankey

Pushed from the M28/M29 widget. Sankey-style flow diagram: intake lanes (left) → total intake → total expenditure → expenditure lanes (right). Band thickness = calorie weight, color = dominant macro / source. Three layouts: horizontal flow (canonical), vertical flow (intake top → expenditure bottom), and a hybrid with stats sandwiching a smaller flow.

iPhone 15 Pro · 393 × 852 pt
Pushed screen · tab bar visible
Tap source · M29 widget

CLASSIC L → R SANKEY

Canonical Sankey direction. Left lanes flow into the TOTAL INTAKE pillar, bridge across to TOTAL OUT, then split into BMR / activity / workout on the right.

VERTICAL T → B SANKEY

Intake "fills" the day from above, expenditure drains it below. Reads top-to-bottom — closer to a phone's natural scroll direction.

HYBRID · STATS WRAP SANKEY

Three summary tiles pulled above a smaller Sankey. Detail rows directly underneath. Most scannable single-glance read.

DAY 1 · NOTHING TO FLOW

Classic layout, but Sankey collapses to two grey pillar stubs with a coach-voice message. Summary tiles render zero; detail section is a single dashed empty-state panel.

VERTICAL · NOTHING TO FLOW

Vertical layout empty state — pillars sit horizontally with the same message.

HYBRID · NOTHING TO FLOW

Hybrid empty — zero stats sit above a tiny pillar-only Sankey stub. The detail section reads as the empty hero.

MOCKUP NOTES · M30 SANKEY FULL-SCREEN

BAND GEOMETRY

Bands are cubic Bézier ribbons connecting a source rect on one edge to a destination rect on the canonical intake/expenditure columns. Thickness across the band equals the source kcal value scaled into the available axis range; bands ease in and out via control points at 50% of the horizontal (or vertical) distance.

COLOR

Intake bands are colored by their dominant macro — protein-heavy meals in #000216, carb-heavy in #F38E3E, fat-heavy in #A85577. Pending/projected meals (dinner before logging) render at 35% opacity with a dashed band-edge as the visual cue. Expenditure bands follow the source palette: BMR #5B7290, activity #00B4A0, workout #E67A0D.

CENTER COLUMNS

Two adjacent inverted (color-reversed) pillars labeled TOTAL INTAKE and TOTAL OUT, each marked with its kcal in DM Sans 700. The gap between them (where they don't quite line up vertically) is the visualization of net surplus/deficit; a small "Net +128" tag bridges them with the semantic color of the verdict.

LAYOUTS

V1 Classic reads left → right; the most natural translation of the metaphor and the spec primary. V2 Vertical flips to top → bottom which scans better on a narrow phone column (intake "fills" the day, expenditure drains it). V3 Hybrid places the three summary stats above the Sankey and the lane detail directly below in one continuous reading column — most scannable.

DETAIL ROWS

Tap-target rows beneath the Sankey for every lane. Intake rows carry P/C/F macro chips; expenditure rows carry source labels and methods (Apple Health vs FuelWell-logged). Pending lanes render dashed with the projected kcal in muted text. Tap → drill-down sheet (not in this mockup; lives at the route /energy/lane?id).

EMPTY STATE

Replaces the Sankey card with a single dashed empty-state panel: Log meals and workouts to see your energy flow. Today's view fills in as you go. Summary tiles still render as zero; detail-row section collapses to a single "+ Log a meal" CTA.

Activity overview widget

FUELWELL • ROUND 2 • STEP 4 — MOCKUPS

M31 Activity overview • Dashboard widget

Tier 2 widget on M25 Dashboard v2. Surfaces today's activity at a glance — workouts logged, active minutes vs target, calories burned, steps — and a week-strip of active minutes by day. Tap target: the whole card → Exercise & Activity tab landing (M32). Three layout studies of the same payload.

iPhone 13 Pro • 393 × 852 pt

Tier 2: routes to M32

Focus: Tier-1 + Tier-2 sibling dimmed

VARIAION 01

2x2 stat grid + week strip

Spec primary: Four numbers in a tight grid; active-minutes carries the progress bar. Seven daily active-min bars beneath read the week.

VARIAION 02

Hero number + sparkline

One big number (active minutes), a 7-day sparkline with the today point flagged. Workouts / burned / steps as three sub-chips. Posture: glance, decide, move on.

VARIAION 03

Move ring + vertical list

Apple-Fitness-style closing ring shows progress to goal at a glance; stats stack as a clean vertical list to the right. Bottom strip carries the week's mini bars.

VARIAION 01 - EMPTY

Day 1 • no movement

V1 grid replaced by a single coach-voice empty panel. CTAs offered: Start workout (primary). Connect Health (secondary).

VARIAION 02 - EMPTY

V2 • no movement

Same empty pattern — keeps the card height so the dashboard doesn't reflow.

VARIAION 03 - EMPTY

V3 • no movement

Move ring + list collapsed into the empty panel — same copy across the three variations.

MOCKUP NOTES • M31 WIDGET STUDIES

EYEBROW & ROUTE

ACTIVITY - TODAY: in body 700 caption at [text.secondary], with an orange figure-run iconlet at the left and a chevron-right at the right indicating the whole card is the tap target → Exercise & Activity tab landing.

STAT PAYLOAD

Four numbers per spec: Workouts logged (n / n planned), Active minutes (n / 300 target), Calories burned (kcal), Steps. Active-minutes carries a 4pt fill bar against the target; the rest are bare numbers with caption sub-labels.

WEEK BAR STRIP

Seven mini bars of active minutes Mon-Sun. Today in [color.primaryorange] HEFTALD, past days in [color.text.muted], future days in [color.bg.border] (the "empty track" tone, so future days don't shout). Day-letter caption beneath each bar.

VARIAIONS

V1 2x2 stat grid + week strip — the spec primary. V2 single hero number (active minutes) with sparkline and 3 sub-stats chipped underneath — read-at-a-glance posture. V3 Apple-Fitness-style move ring + vertical stat list + mini week strip at the bottom edge — most visually distinct, treats minutes-toward-target as a closing ring.

EMPTY STATE

Single panel inside the card with a "figure-walk" glyph, the coach copy No movement logged yet today, and two CTAs: Start workout (primary) and Connect Apple Health (secondary). Keeps the card height so the dashboard layout doesn't reflow.

Dashboard v1 (reference)

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M10 Dashboard • Home tab root

Promoted from approved wireframe § 3.10 V1 (density-optimized vertical scroll). Verdict-first per DESIGN.md — the engine's answer leads, the data follows. Three states cover the lifecycle a user encounters: on-track mid-day, off-target caution, and the post-onboarding day-zero empty state.

iPhone 15 Pro • 393 × 852 pt
Light • color.bg.base #F4F5F7
Tab • Home

• VARIATION 01 • STATE

Mid-day • on track

Friday 3:42 PM. User has logged breakfast, lunch, an afternoon snack. Verdict promotes the engine's dinner pick. Macros tracking sub-target across all three channels.

• VARIATION 02 • STATE

Evening • caution

Friday 8:14 PM. Lunch ran hot and the pepperoni-pizza log just pushed fat over plan. Verdict flips to warning, macros band shows the fat fill spilling into error-red, coach reaches with a swap.

• VARIATION 03 • STATE

Day 1 • post-onboarding

First open after plan reveal. Nothing logged yet. Calories card shows 0 / 2,260 with a neutral chip, macros band is muted, schedule highlights today as the empty starting point. Welcome verdict invites the first log.

MOCKUP NOTES • STEP 4

VERDICT CARD • TOP OF CONTENT

The decision-engine surface, per DESIGN.md § Components → ScreenScaffold rule: verdict is always above the data. Uses the inverted color.bg.elevated #0F1117, highlight row as the canonical workhorse for emphasis in a light theme. Title in Outfit 600 22pt with a gradient-text accent on the operative phrase; subtitle reads the supporting context in color.text.onDarkMuted. Primary CTA inside is gradient.brand with elevation.cta; secondary CTA is the ghost "Why?" link. Verdict pulse-dot color tracks the verdict tier — success-green on track, warning-amber on caution.

CALORIES CARD

White card, radius.lg, elevation.1. Hero number in DM Sans 600 32pt tabular followed by the target in muted color; a small chip on the right shows the running delta (+/- vs. plan) in color.semantic.success tint when in budget, warning tint when projected over. 32pt 7-bar histogram below shows the week's calorie trend — today is the success-green bar, past days are color.text.primary, future is the dim track.

MACROS BAND

The dark inverted-row from DESIGN.md — color.bg.elevated #0F1117, radius.lg. Three columns separated by hairline dividers in color.bg.border.dark. Each column carries an 8pt macro-token swatch, label in color.text.onDarkMuted, value in DM Sans 600 22pt, "of N" beneath, and a 4pt fill bar in the macro color. In V2 the fat bar overflows to color.semantic.error red to telegraph the over-limit state — same shape, different color, no text change.

WEEK SCHEDULE

Seven-day strip, each tile radius.md with the weekday letter, date number in DM Sans 600, and a verdict-color dot beneath. Today is the inverted dark tile so the day reads as the focus point of every glance. Future days drop to color.bg.base with disabled text — the engine has nothing to say there yet.

WORKOUT + HABIT PANES

Side-by-side cards in a 2-column row. Workout pane shows the next session ("Strength • Push, 5pm") with three numeric chips (45 min • 4 lifts • 90% comp). Habit pane shows a 7xN dot calendar in color.semantic.premium purple — purple is the habit tracking accent color from DESIGN.md (deliberately distinct from macro / verdict colors so the eye can route by hue alone).

COACH NUDGE

3pt premium-purple left accent (the FuelWell coach's signature stripe). Avatar uses the same gradient as the brand mark. Body is one or two sentences in coach voice referencing today's real data — never generic. Quick-reply chips beneath open the Coach tab pre-loaded with the response. Only renders when the engine has a trigger — never as a placeholder.

MEALS LIST • TODAY

Compact rows: 36pt color-coded meal-type icon, name + meta line (time, calorie subtotal, source: recipe or restaurant), trailing kcal number. Pending slots ("Dinner") render with a dashed border and the coach's suggested kcal in muted text — a soft commitment the user can replace with a tap. Header carries a live total + the macro fingerprint of what's already eaten.

FAB

56pt circular Quick-Add fab, gradient.brand + a strong shadow. Floats 22pt above the tab bar at the right edge. Opens 3.12 Add Meal sheet. Same placement on every variation — anchor for muscle memory.

TAB BAR

iOS-style five-tab bar with blur surface. Tabs: Home (active), Log, Coach, Learn, Progress. Active state is filled glyph + color.text.primary; inactive is line glyph at color.text.muted. 30pt bottom inset for the home-indicator gap.

Your Plan / Profile

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M24 Your Plan • Profile

Promoted from approved wireframe § 3.24 V1 (profile + targets + weighty action). Three states: default with the 2x2 macro target grid, scrolled into the settings-style edit list, and the Recalculate confirm modal (per Max — intentional, slightly weighty).

iPhone 15 Pro • 393 × 852 pt
Pushed from Home / Settings
Plan • 2,260 kcal

variation 01 • STATE

Targets • default

Profile + dark calorie hero + macro target grid + the why-this-plan strap + weighty gradient-brand Recalculate CTA. Below: input rows (goal, body) ready to drill into.

variation 02 • STATE

Settings • all inputs

iOS settings-style grouped list. Plan inputs section, then connections (HealthKit / Notifications with status tags), then the account section ending in a red Delete row.

variation 03 • STATE

Recalc • confirm modal

User tapped Recalculate. Centered modal with the warning glyph, two-line copy, and a live diff block showing the projected delta per number. Gradient-brand primary + cancel.

MOCKUP NOTES • STEP 4

PROFILE HEAD

56pt squirrel avatar with the brand-green/blue gradient and the user's initials. Name + email + pills (Maintain • Moderate • 32 yr • Female). Trailing edit button opens the avatar editor.

TARGETS CARD

Calories renders as a full-width dark hero cell (Outfit-numeric 40pt) with the macro target grid beneath. Each cell has a 3pt top accent in its macro color, tappable to drill into the per-target editor. "Tap to edit" hint anchors muscle memory.

WHY-THIS-PLAN ROW

Below the targets, a soft strap referencing the same rationale shown at the 3.9 reveal — "Anchored to 1g protein per pound • recalibrated 14 days ago • next auto-check Sun." Tap to expand the full assumption set.

RECALCULATE • WEIGHTY

Gradient-brand 52pt CTA with a refresh glyph. Visually the heaviest element on the screen. Tap fires the V3 confirm modal — Max's rule: never recalc without showing the diff first.

SETTINGS LIST • V2

iOS settings-style grouped rows: Edit goal / Edit body / Dietary constraints / Lifestyle / HealthKit / Notifications, each with tinted square icon and a meta line that surfaces the current setting (DM Sans tabular for numerics). HealthKit shows "Connected" in success-green; Notifications shows "Quiet 10p-7a" muted.

RECALC CONFIRM • V3

Centered modal on a 45% dim scrim. Warning-amber alert glyph in a tinted ring + "Recalculate your plan?" head + supporting copy explaining what's about to change. Diff block shows the projected delta per number (DM Sans tabular). Two-action stack: gradient-brand "Recalculate now" + ghost "Cancel." Confirmation kicks off the same engine animation we showed at 3.9.

Health Score detail

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M26 Health Score detail

Promoted from approved wireframe § 3.26 V1 (stacked component cards). Three states: composite hero with the 5-component breakdown, the radial breakdown layout, and the locked-until-day-7 empty state.

iPhone 15 Pro - 393 × 852 pt
Pushed - from Progress
Diagnostic - not a trophy

variation 01 - STATE

Composite • stacked

Dark hero card with 86.4 composite, brand-green delta pill, 30-day sparkline. Why-this-score expanded. Five component cards stacked below, each with tinted icon, score, delta, and a 70pt sparkline.

variation 02 - STATE

Radial breakdown

Composite at the center; 5 component bubbles orbit around it in clockwise order (Nutrition, Training, Recovery, Body, Sleep). Backup card list beneath for users who can't decode the radial.

variation 03 - STATE

Locked • day 4 / 7

Composite not yet computable. Dark promise card with gradient-text accent, 7-day check grid (3 done, today active), brand-green progress fill bar. Component cards rendered in dimmed preview state.

MOCKUP NOTES • STEP 4

HERO CARD

Dark elevated card with the brand-green pulse. "HEALTH SCORE" eyebrow, **DM Sans 700** 64pt composite (86.4) + "of 100" sub. Brand-green delta pill ("▲ 4.2 - 30 d") in factual phrasing per Max — diagnostic, never celebratory. 30-day sparkline beneath with the today-dot in success-green.

WHY-THIS-SCORE EXPANDER

White info-blue card listing the engine's reasoning: "Training consistency climbed 5.4, sleep slipped 1.2 — net positive."

FIVE COMPONENTS

Nutrition (success-green) - Training (info-blue) - Sleep (premium-purple) - Recovery (Apple-Health red) - Body composition (warning-amber). Each card carries a 40pt tinted icon square, eyebrow, **DM Sans** score, delta pill (success / warn / down — directional only), and a 70×28 sparkline. Trailing chevron pushes to that Progress section.

RADIAL - V2

Composite stays the center disc (130pt circle on the inverted card). Five 60pt component bubbles orbit around it in clockwise order from the top: Nutrition / Training / Recovery / Body / Sleep. Connecting hairlines drawn in SVG; each bubble shows its score in **DM Sans** tabular with the small tinted icon. Backup list of 2 components beneath catches users who can't decode the radial.

EMPTY - V3

Dark promise card with gradient-text accent ("7 days unlocks your score.") + the 5-component explanation. 7-day grid below shows 3 days done with success-green checks, today active in dark, three more pending. Progress strap with a brand-green fill bar shows "4 of 7 days banked."

Habit Tracking detail

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M27 Habit Tracking detail

Promoted from approved wireframe § 3.27 V1 (grid + list below). Dot-grid is visualization, not reward. Three states: weekly default, grid-only with row labels for users with 5+ habits, and a habit row expanded into a 14-day strip with stat pills + suggested-habits row.

iPhone 15 Pro • 393 × 852 pt
Pushed: from Progress
Default: weekly view

variation 01 • STATE

Grid + list

Weekly view. Dark stat strap "17 of 28 on track • 61% adherence." 7x4 dot grid card, four habit rows beneath with today-toggles. Two are checked.

variation 02 • STATE

Grid-only • 6 habits

Habit names live as left-rail labels next to each grid row. Most compact layout — best for users with 5+ habits where a separate list would duplicate the grid.

variation 03 • STATE

Sleep • expanded

Sleep row promoted into the inline expanded state on a soft tint. 14-day square strip, four stat pills (adherence, streak, longest, coach-detected pattern), suggested habits beneath in dashed-border cards.

MOCKUP NOTES • STEP 4

TOP • RANGE

Title + gradient-brand "+ Add habit" pill on the right. Range segmented control beneath: Week / Month / All. Defaults to Week — short range stays honest about variability.

STAT STRAP

Inverted band: "17 of 28 habit-days on track" + the 61% adherence number in **DM Sans 700** brand-green. Same diagnostic-not-trophy tone as M26.

DOT GRID • V1

Single 7xN grid card. Rows = habits, columns = days. Dot states: solid success-green (done), partial (50% green, ringed), empty white-with-dash (skipped today), white-bordered (no log), faint dashed (future). The grid is the visualization; it never gamifies.

HABIT LIST

Tinted-icon row with habit name, plain-English definition ("≥7h actual sleep"), trailing weekly count (DM Sans tabular, "5 / 7"), and a today-toggle. Tapping the row promotes it into the expanded V3 state.

GRID-ONLY • V2

Habit names move to 110pt row labels on the left of the grid; the separate list disappears. Best for 5–7 habits where the list duplicates the grid. Day headers run across the top of the grid column.

EXPANDED • V3

Sleep row expanded inline on a soft tinted background. 14-day strip in larger 4pt-radius squares (a more honest read than dots at the 2-week range). Stat pills beneath show **62% adherence**, current streak, longest streak, plus an info pill explaining the engine's drift signal. Suggested-habits row appears below ("Stretch 5 min", "Daily walk after lunch") with dashed-border dotted-line styling and a gradient-brand + pill to add.

Menu (hierarchical sheet)

Help screen (replaces v1 Learn)

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M36 Help

Reached from the Help icon on Dashboard (and the Help row in M35 Menu). Merges Learn-style articles with quick Settings access — search at top, one featured article, category tiles, in-progress reads, the most-used Settings rows, a coach hand-off card, and a feedback link.

iPhone 15 Pro - 393 x 852 pt
Pushed screen - back chevron
Routes - Article (M22), Settings, Coach (M20)

VARIATION V3 Spec primary

Search → Featured (one big card) → Categories → Continue reading → Quick settings → Coach hand-off → feedback link.

VARIATION V2 2-up featured row

Featured today expands into one big card plus two smaller secondary cards beside — useful when fresh editorial content is publishing weekly.

VARIATION V1 Browse-first

Categories pulled above Featured — for users who self-navigate by topic rather than read the recommended pick.

MOCKUP NOTES · M36 HELP

SEARCH PINNED AT TOP	Single search field "Search articles, settings, or ask a question". Pinned (visually) so it stays in reach while the user scrolls. Right edge carries the cmd-K hint kbd ("7") for Tweaks-toggle users on iPad later.
FEATURED ARTICLE	One hero card. ChatGPT-Images-2.0-caption placeholder (cool gradient with the caption rule in the bottom-left), 3-min read pill, title, lead. "One thing to try today" takeaway lives in a slim base-tone block beneath the lead with a success-green accent bar — the article-end commitment surfaced up front.
CATEGORIES SCROLL	Seven horizontal tiles per spec: Nutrition basics · Macros explained · Eating out · Recovery · Training fundamentals · Sleep & energy · Mindset. Each carries a token-colored icon and an article count.
CONTINUE READING	List of articles the user started but didn't finish. 42pt thumbnail + title + progress track (info-blue fill) + percent. Renders only when there is in-progress reading; collapses cleanly on a fresh install.
QUICK SETTINGS	The three rows that drive ≥80% of settings traffic: Notifications, HealthKit, Account. Plus an "All settings →" link to the full Settings screen. Right-aligned value column shows current state (On · Connected · @jordan.c).
TALK TO COACH	Inverted mini-card with the coach avatar and the line "Have a question? Ask coach directly." Tap → Coach Chat (M20) pre-loaded with "Help:" prefix.
SEND FEEDBACK	Text-link only, centered at the bottom — intentionally low-emphasis, signals it's the route of last resort.
VARIATIONS	V1 single featured card (spec primary). V2 a 2-up featured row + a "Latest" tile, useful when the editorial team has fresh content. V3 categories pulled above featured — for users who self-navigate by topic.

Meals & Nutrition hub

FUELWELL - ROUND 2 - STEP 4 - MOCKUPS

M33 Meals & Nutrition • tab landing

Hub screen reached from the Meals tab. Today's plate hero with a 124pt 1/0 ring + remaining macros, today's meals list. Quick access destinations, and a recent-foods scroller for one-tap re-log. Three variations explore ring vs. macros-only hero and list vs. grid Quick access.

iPhone 15 Pro - 393 x 852 pt

Tab - Meals & Nutrition

Routes - M11 log, M14 restaurant, M17 recipe, M18 plan, M28 grocery, M30 energy

VARIATION 01 Ring plate • list QA

Spec primary 124pt ring with three macro rows beside, vertical meal list, list Quick access, horizontal recents.

VARIATION 02 Ring plate • grid QA

Same hero, but Quick access surfaces as a 2-column card grid — better for visual scanning of destinations.

VARIATION 03 Numbers-first plate • horizontal meals

No ring — single big number with macro mini-bars stacked beside. Meals scroll horizontally so the screen breathes. Quick access plays as a list.

VARIATION 01 • EMPTY First-time • list

Plate hero swaps to coach-voice prompt with (Photo log) [Coach suggest] CTAs. Today's meals collapse to three dashed slots. Recent foods still scrolls (last-week items).

VARIATION 02 • EMPTY First-time • grid

Empty hero + dashed meal slots + grid Quick access — destinations stay prominent so the user can dive into Recipe Browser or Restaurant Guidance.

VARIATION 03 • EMPTY First-time • horizontal

Empty hero + horizontal meal-slot scroll. Quick access list ensures all destinations are reachable while the day is still blank.

MOCKUP NOTES • M33 MEALS TAB LANDING

HEADER

Display 700 26pt "Meals & Nutrition" with a sub-line ("Hi - 3 of 4 meals logged"). Trailing + button uses `gradient.brand` — opens M12 Add Meal sheet.

TODAY'S PLATE HERO

Smaller version of the M29 dual ring (124pt) paired with three macro rows on the right. Ring shows cumulative kcal vs target, macros show remaining (target — consumed) so the user sees what's left rather than what's eaten — different lens from Dashboard. Tap → M30 Energy balance (same destination as Dashboard widget).

TODAY'S MEALS

Same row pattern as M10/M28 — color-coded meal-type icon, name + meta line, trailing kcal. Pending slots render dashed with the coach's projected kcal. V1 & V2 use the vertical list. V3 shows meals as a horizontal card row so the rest of the screen breathes.

QUICK ACCESS - DESTINATIONS

Six per spec: Meal Log, Restaurant Guidance, Recipe Browser, Meal Plan Generator, Grocery List, Macro History. Color tokens follow each destination's role — green (food), warning-amber (restaurants), info-blue (recipes), premium-purple (plans), orange (grocery), info-blue (charts).

RECENT FOODS

Horizontal scroll of 132pt cards: meal-type tinted placeholder image, name, kcal+macro chip. Tap → re-logs the same meal at "now" (M13 portion editor open).

EMPTY STATE

Hero swaps to coach-voice: No meals yet today. The fastest way is a photo — try the + above. Or coach can suggest something that fits your remaining macros. Two CTAs: Photo log (primary, opens camera) and Coach suggest (ghost). Today's meals collapses to dashed slots for breakfast/lunch/dinner. Recent foods still renders (last-week leftovers).

Meal Log day view

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

M11 Meal Log day view · Log tab

Promoted from approved wireframe § 3.11 V1 (meal-type sections — easiest to scan). Three lifecycle states: today partial, yesterday closed, tomorrow planned-from-Plan-Generator. The dark day summary band sits above the breakfast/lunch/snack/dinner sections; macro fingerprint always under the calorie total.

iPhone 15 Pro - 393 × 852 pt
Light - color.bg.base #F4F5F7
Tab - Log

MOCKUP NOTES · STEP 4

DAY STRIP	Seven 14pt-radius pills on white, today's date stays inverted with the brand-green pulse dot. Tap to switch day; swipe past for older. Past days carry verdict-color dots; future days are flat.
SUMMARY BAND	The DESIGN.md inverted-row carried up from the Dashboard. Calorie total + remaining wrapped around a 56pt ring (progress in green, error-red on over). Macro fingerprint beneath in a divided row — same swatches as M09 & M10. On past days the ring fills to 100%; on future days it shows the planned total.
SECTION HEADERS	Outfit 600 15pt with a 4pt color pip per meal type — carbs-amber for breakfast, protein-green for lunch, info-blue for snacks, fat-purple for dinner. Right side shows the section total (or "pending", italicized) in DM Sans tabular.
MEAL ROWS	48pt thumbnail tile (gradient placeholder per food type), name in inter 600, meta line with time + source tag (Recipe / Rest. / Pantry / Plan) + macro fingerprint. Trailing kcal in DM Sans 600 16pt tabular. Tap row → 3.13 Food Detail; long-press → quick-edit popover.
PENDING ROWS	Dashed border, transparent fill, no shadow. Name reads "Add <mealtype>"; meta shows the coach's projection ("Coach suggestion ready") or the planned meal name when from Meal Plan. Tapping opens 3.12 Add Meal sheet.
CLOSED-DAY STRAP · V2	Once the day closes (midnight rollover), the dark summary band stays but a green confirmation strap sits beneath the day strip: "Closed at 1,932 kcal — within plan." Quietly informational, not celebratory.
PLAN CALLOUT · V3	Future days where the Plan Generator has filled meals get a single dark plan-strap above the sections: "From your plan · Generated Wed · Edit". Each meal row carries the purple Plan source tag to make the provenance obvious.

Add Meal sheet (Photo default)

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M12 Add Meal sheet • Photo / Search / Scan

Promoted from approved wireframe § 3.12 V1 (full-bleed Photo with recents pinned). Three states cover the three modes — Photo, Search, Scan. Sheet is a 86%-height modal over the Log tab on a dim scrim, with the segmented control + recents shared across modes.

iPhone 15 Pro • 393 × 852 pt
Model • over Log tab
Default • Photo

variation 01 - mode

Photo • default

Sheet just opened. Camera live, auto-detect on, coach hint shown for first-use education. Tap shutter sends frame + recents to 3.13 portion editor.

variation 02 - mode

Search • typing

User typed "grilled chi". Top-result list shows matches with the substring highlighted, sources ranked across recipes / brands / restaurants / USDA.

variation 03 - mode

Scan • barcode match

Barcode scanner reads a Chobani container. Found-product card descends from the top with the kcal estimate pre-bound; Save commits 1 serving to the log.

MOCKUP NOTES • STEP 4

SHEET

86% screen height, **radius.ig** 28pt top corners, grabber centered on top. Cancel-X left, "Add a meal" title centered, "Save" right (disabled gray until something is captured). Slides up over a dimmed Log tab; tab bar peeks through at the bottom edge for orientation.

SEGMENTED CONTROL

Three options: Photo / Search / Scan, in that order. Inactive cells transparent on the **bg.borderSoft** track; active cell flips to **bg.elevated #0F1117** with white 600 text — the same control vocabulary as M04's height units.

PHOTO MODE - V1

Full-bleed camera viewfinder inset 16pt with **radius.ig** rounding. Top-left/right 5F Pro reticles, a glassy "Auto-detect on" capsule centered up top with a pulse dot, and a coach hint banner ("Point at your plate — I'll parse it") that auto-dismisses on capture. Shutter at the bottom: 68pt circular shutter flanked by the photo library tile (left) and flash toggle (right). Captured photos route to 3.13 Food Detail with the parsed items pre-filled.

SEARCH MODE - V2

Search field with a leading magnifier and trailing voice glyph. Caret active on render. Results section card shows highlighted query matches: "grilled chicken bowl" etc. Each row has a 40pt tinted thumbnail, name with the matched substring highlighted yellow, source meta (USDA / Brand / Recipe / Restaurant), trailing kcal stack and a 30pt + button to add. The recents row sits beneath the results for one-tap re-logging.

SCAN MODE - V3

Dark viewfinder same dimensions as Photo, but with a green-brand corner-bracket reticle around a centered 260x150 zone. A faint horizontal scan-line glows through the box. On match, a found-product card descends from the top with the brand glyph, name, brand - serving size, and a green CONNECTED-style pill showing the kcal estimate; below is a "Save 1 serving" CTA. Below the camera, a status helper at the bottom: "Align barcode within the frame - auto-captures."

RECENTS

Horizontal chip row with 30pt circular thumbs in food-category gradients. Each chip carries the food name + a divided kcal sublabel. Tap the chip to log a single serving of that food at the same time as the photo path — primary "re-log" affordance.

SAVE BAR

Pinned at sheet bottom on Search & Scan modes once a result is present. Two buttons: ghost "More options" → 3.13 portion editor, gradient.brand "Save to Log" → commits and dismisses the sheet.

Food Detail / Portion editor

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M13 Food Detail · Portion editor

Promoted from approved wireframe § 3.13 V1 (image + macros side-by-side). Three states cover the editor lifecycle: default 1-serving on entry, mid-edit with 1.5 servings + live recompute strap, and edit-existing-log mode with the Delete row exposed.

iPhone 15 Pro · 393 × 852 pt
Model · 78% sheet
Food · Sweetgreen chicken bowl

Variation 01 · State

Default · 1 serving

User just picked this food from Search. 1 serving = base nutrition (732 kcal / 62 g P / 78 g C / 18 g F). Stepper at 1, "serving" unit active, slot defaulted to Lunch.

Variation 02 · State

Edited · 1.5 servings

User bumped the stepper to 1.5. Macros and calories re-render in place; a warning-amber diff strap appears above the macros explaining the delta vs. the default.

Variation 03 · State

Editing existing log

Entered by tapping the row in 3.11 Meal Log. Same hero + controls; bottom of sheet exposes the destructive 'Delete row in error-red'.

Mockup Notes · Step 4

Hero — Image + Headline

116pt square photo placeholder left (warm gradient with food blobs — ChatGPT Images 2.0 at finalization). Right column carries the food title in **Outfit 700** 19pt, a brand-source line with a tinted source pill ("Rest." / "Recipe" / "USDA"), and the live calorie hero in **DM Sans 700** 40pt with a small green delta-chip (" +220 vs. plan slot").

Macro Tiles

3-cell grid below the hero. Each tile a 12pt-radius white card with a 3pt top accent stripe in the macro token color, label / value / "of plan" line. All three numbers and the calorie hero re-render live as the portion changes — the central proof point of the editor.

Portion Stepper

56pt minus/plus pill-corners flanking a dark value capsule with the current value in **DM Sans 700** 28pt + lowercase unit. Long-press the value to type a custom number. Below sits the unit segmented control (g / oz / serving) — switching unit re-scales the displayed value to the canonical-equivalent and rounds to the appropriate decimal.

Quick Portions

Five-chip row (1/2, 1/4, 1, 1 1/4, 1 1/2) at **radius pill**. Active chip flips to **bg.elevated**. Quick-pick is the muscle-memory shortcut for users who don't want to tap the stepper four times.

Meal Slot + Time

Two-column row of pickers: meal slot (Breakfast / Lunch / Snacks / Dinner) and time. Slot defaults to whichever section is currently empty in the day — engine's best guess. Time defaults to "Now."

Notes

Single multiline field, white surface, placeholder "Anything to remember? (e.g. 'no dressing', 'shared half')." Free text is appended to the log entry and surfaced in 3.11 meta line.

Diff Strap · V2

When the user moves the stepper away from the source's default (1 serving), an amber strap appears between hero and macros: "Logging 1.5x the default — calories +366, protein +27g." Live-recomputes; tap to undo.

Delete Row · V3

Renders only in edit-existing mode (entered by tapping a meal row in 3.11). Red label + trash glyph, bottom of the sheet. Tap → confirmation actionsheet.

Restaurant Guidance

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

M14 Restaurant Guidance

Promoted from approved wireframe § 3.14. Two entry paths, three states across them: dashboard-CTA entry with top-3 picks for the remaining macros, log-tab browse with featured + alphabetical, and the search-active state with substring-highlighted matches.

iPhone 15 Pro - 393 x 852 pt
Pushed screen - tab bar visible
Section - Eating out

variation 01 - ENTRY

Dashboard CTA · Top 3

Engine knows what's left for today (714 kcal, 32 g protein gap) and ranks three picks. Top-1 carries the gradient-brand rank badge; cards two and three show the runner-ups with the engine's reasoning beneath each.

variation 02 - ENTRY

Log tab · browse

Tab-bar entry. Search + Show-nearby toggle, featured carousel up top, full A-Z list below with macro-fit pills on every row so the verdict pre-renders.

variation 03 - STATE

Search active

User typed "chi". Substring matches highlighted yellow; cuisine chips above stay sticky. Coach surfaces one suggestion not in the search but better for the macros — surfaced beneath the matches.

MOCKUP NOTES · STEP 4

DASHBOARD ENTRY - V1

Top: inverted-row context strap carries the user's remaining-macros for the day in **color-by-elevated** — "714 kcal + a 32 g protein gap left" with the three macro fingerprints beneath. The headline phrase picks up a green-blue gradient-text accent. Section below: "Top 3 for right now," three pick cards in priority order. Card #1 carries a Top Pick rank badge in **gradient-brand**; the others use a neutral inverted badge. Each card shows the restaurant logo tile (color-coded), the item the engine recommends, kcal + P/C/F at full saturation, and a one-line "Why this fits" with the fit reason highlighted in success-green.

LOG-TAB BROWSE - V2

Same screen entered from the Log tab → Restaurants shortcut. Search field + "Show nearby" toggle (off by default — location prompt only on toggle). Featured horizontal carousel of curated cards with a tinted top-image and a small logo tile that drops 14pt below to overlap the image edge. Below: full alphabetical list with a 38pt logo tile, name, cuisine - distance, trailing macro-fit pill (green if it slots in the remaining-macros budget, amber if it's a stretch).

SEARCH ACTIVE - V3

User typed "chi". Search field focused (dark hairline + soft halo). Caret blinking. Cancel link right. The list collapses to substring-matched results with yellow-highlighted bold match. Cuisine chips above the results stay sticky so the user can narrow by category mid-search.

COACH NUDGE (V1)

Bottom-floating purple-avatar nudge above the tab bar reminding the user that the picks update live: "Updates as you log. Pick something and I'll re-rank the rest."

MACRO-FIT PILL

The single most-important visual on this screen — a quick at-a-glance "this slots in" indicator. Green pill = within remaining budget for all three macros + calories. Amber pill = within calories but trips at least one macro. Pill carries the projected delta in DM Sans tabular.

Restaurant Detail

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

M15 Restaurant Detail • Sweetgreen

Promoted from approved wireframe § 3.15 V1 (picks above, menu below). Hero banner with logo card overlap; three states cover the lifecycle: default coach picks + categorized menu, a single pick expanded with full nutrition breakdown, and the "fits my plan" filter active narrowing the menu to in-budget items.

iPhone 15 Pro - 393 x 852 pt
Pushed - tab Log active
Brand - Sweetgreen

variation 01 - state

Default • picks + menu

Detail screen on first arrival. Coach picks horizontal carousel above the categorized menu. Top-pick card gets the success border + gradient-brand rank badge.

variation 02 - state

Pick expanded • detail

User tapped a coach pick. Carousel replaced by a full-bleed detail card with kcal + P/C/F, three delta tiles showing exact fit math, the full why-paragraph, and a primary "Log 1 to lunch" CTA.

variation 03 - state

Fits-my-plan filter on

User toggled the green "fits my plan" chip. Menu collapses to 6 of 24 items. Each row carries a fit-mini pill showing the delta; over-budget items render dimmed below a "hidden by filter" divider.

MOCKUP NOTES • STEP 4

HERO BANNER

180pt brand-tinted gradient (Sweetgreen's greens) with abstract food-shape blobs. Floating glass nav overlay with back, share, favorite. The restaurant identity card overlaps the banner by ~56pt and carries the logo tile, name in Outfit 700 20pt, cuisine • distance • price meta, and a row of attribute badges (Open • 0.4 mi • Pickup • "Hi-protein" — the success badge is the coach's signal that this brand has strong macro-fit options).

COACH CONTEXT STRAP

Inverted band above the picks. Purple coach avatar + "Showing items that fit your 714 kcal • 32g protein gap" with a live toggle. Toggling off shows the brand's full menu without macro-fit ranking.

COACH PICKS • V1

Horizontal carousel of 3-pick cards. Top pick carries a 1.5pt "color.semantic.success" border + green-tinted shadow + gradient-brand "top pick" rank badge. Each card shows item name, modifier sub, kcal in DM Sans 700 26pt tabular, P/C/F line, "Why this fits" rationale, then a gradient-brand "Log it" CTA + "more" button.

PICKS EXPANDED • V2

Tapping a pick (or a recommended menu row) replaces the carousel with the full-width expanded card. Four numeric cells across (kcal / P / C / F) in DM Sans 18pt above three success-tinted delta tiles showing exactly how the item slots into the remaining macros. The full why-this-fits paragraph reads three sentences. Primary "Log 1 to lunch" + ghost "Customize" actions.

MENU LIST

Categorized (Bowls / Salads / Plates / Sides / Drinks). Each row: item name (+ green RECOMMENDED tag for engine picks), macro fingerprint (DM Sans tabular), trailing kcal stack and a 28pt "+ Add" pill. Tap row → open Food Detail; tap + Add → optimistic-log with macro-fit delta.

FILTER ACTIVE • V3

"fits my plan" chip flipped on (success-green filled). Menu collapses to only the items that slot into the remaining macros — non-fitting rows render dimmed beneath a "hidden by filter" affordance. Coach context strap reads "Showing 6 of 24 menu items that fit." Saves the user from manually re-doing the math the engine already did.

Recipe Browser

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M16 Recipe Browser

Promoted from approved wireframe § 3.16 V1 (hero strip + grid below — leads with remaining-macros ranking, the FuelWell differentiator). Three states: macro-ranked default, browse-all with filter chips, and the Saved collections tab.

iPhone 15 Pro · 202 × 852 pt
Pushed · tab Log active
Section · Recipes

variation 01 · STATE

For your macros · default

Engine ranks recipes against the remaining macros. Top 3 in a horizontal carousel; the rest in the grid with fit-mini deltas in green.

variation 02 · STATE

Browse all · Hi-protein filter

Macros band collapses. Filter chips replace the engine ranking — "Hi-protein" is the green primary filter; results sort by relevance and surface fresh recipes.

variation 03 · STATE

Saved · collections

Three collection rows up top with stacked thumbnail previews, then a grid of individually-saved recipes (hearts filled). Search narrows to saved-only.

MOCKUP NOTES · STEP 4

TOP SEGMENTED

Three options: **For your macros** (default) · **Browse all** · **Saved**. Active cell uses **bg.elevated**. The "For your macros" tab carries a small green count badge showing how many fits the engine found ("12").

REMAINING-MACROS BANNER

Inverted dark band with the "WHAT'S LEFT" eyebrow, a 20pt headline ("714 kcal, lean protein needed") with a gradient-text accent on the operative phrase, and the three macro fingerprints beneath. Same vocabulary as M14's strap.

TOP-3 CAROUSEL · V1

Three larger cards horizontally — recipe photo with a glassy fit-percentage badge top-left (gradient-brand on top pick, dark glass on the others) and a heart save-button top-right. Card body carries the name (Outfit/Inter 700 14pt, 2-line clamp), time · servings meta, and a macro fingerprint with the protein number bumped.

"MORE FITS" GRID

2-column grid beneath the carousel — same recipe-card vocabulary but trimmed: 1:0.78 image, name, time meta, footer with kcal stack and a green fit-mini chip showing the kcal-budget delta. Cards carry an optional left-corner protein tag for recipes that close the protein gap specifically.

BROWSE-ALL · V2

Banner collapses; search field appears up top. Filter chip row goes wide — **All** / **Hi-protein** / **Lower carb** / **30-min** / **Vegetarian** / **Pantry-only**. First chip stays selected. Grid drops the fit-mini chip and the engine ranking; results sort by relevance to filter set.

SAVED · V3

Three collection rows up top (stacked 64pt thumb stacks): **Weeknight wins** / **Hi-protein staples** / **Sam-approved**. Below: 2-col grid of individually-saved recipes with the heart filled. Search reduces scope to saved-only.

FAB

*"FAB in the bottom-right opens the "Add custom recipe" sheet (out of scope for Pilot, but the entry exists from day 1).

Recipe Detail

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M17 Recipe Detail · Sheet-pan chicken

Promoted from approved wireframe § 3.17 V1 (stacked actions). Three states: top-of-recipe default; scrolled into instructions with the compact sticky title bar, and the dark Cooking-mode immersive step-by-step with a live timer.

iPhone 15 Pro · 393 × 852 pt
Pushed · tab Log active
Recipe · 94% fit

variation 01 · state

Default · top of recipe

First render. Hero photo, fit-ring strap below the title meta, 4-cell macros, gradient-brand "Log this meal" action row, then the servings stepper + ingredients list.

variation 02 · state

Scrolled · sticky title

User scrolled past the hero. Frosted sticky bar carries the recipe name. Method section visible — first two steps marked done; "Start cooking" link in the section header.

variation 03 · state

Cooking mode · timer

Dark immersive overlay. Step 3 of 6 with a 18-min timer running (11:24 remaining, green progress arc), the for-this-step ingredient mini, and prev/next bottom controls.

MOCKUP NOTES · STEP 4

HERO

4:3 photo placeholder with the four-ingredient blob pattern (chicken, sweet potato, broccoli, balsamic). Glassy nav row floats top — back, share, heart, ...

TITLE BLOCK + META

Recipe title in Outfit 700 22pt with -0.018em. Meta row: 25 min · 4 servings · 540 kcal/serving in `color: text.secondary` with each numeric value bumped to `color: text.primary` DM Sans tabular.

FIT STRAP

Dark band under the meta: 44pt brand-green progress ring + "94% fit for tonight — lands your protein gap and 32 kcal under budget." Tap → expanded breakdown that mirrors M15's pick-detail card. Replaces the wireframe's plain meta line with engine context.

4-CELL MACROS

Kcal · Protein · Carbs · Fat each in a small white card. **DM Sans 700** tabular. These render *per serving*; the serving stepper in the next section is what scales them in the log.

ACTIONS

Gradient-brand "Log this meal" primary + three ghost square buttons (Add to grocery, Add to plan, ... more). Long-press primary → portion-editor sheet (3.13) with quantity pre-bound.

INGREDIENTS

Right-aligned servings stepper inside the section header. List shows checkbox + qty + name with a tiny "Have it" pantry pill in success-green for items already in your pantry. Tap a row → strikethrough + checkbox fills with inverted-dark (the "I have this" state).

STEPS

Each step is a card with a 32pt dark numbered tile. Time-bound steps carry a blue info pill ("28 min"). Tapping a card promotes it into Cooking mode (V3).

STICKY COMPACT NAV · V2

Once the user scrolls past the hero, a frosted-glass bar slides in with back, the recipe name in Outfit 700 15pt (1-line clamp), and the heart. The hero photo scrolls away underneath; the page reads as a long-scroll recipe.

COOKING MODE · V3

Dark immersive overlay launched from "Start cooking" or any step tap. Top: step progress bars (one per step, current segmented). Body: STEP 3 / 6 eyebrow, the full instruction headline in Outfit 700 26pt + a supporting detail paragraph. Below: a live 28-min timer card (ring shows remaining), then the ingredients-for-this-step mini-card. Bottom: prev / next nav with the gradient-brand "Next step →" primary.

Meal Plan Generator

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M18 Meal Plan Generator

Promoted from approved wireframe § 3.18 (form → results V1 stacked summary). Three states cover the full lifecycle: form before generation, the engine resolving 3 candidate plans, and the three-plan stacked results with the top plan picked up by the success border.

iPhone 15 Pro · 393 × 852 pt
Pushed · tab Log active
Output · 3 plans per generate

VARIATION 01 · STATE

Initial · form

Empty form before generation. Fanned day cards in the hero, three sections in one card (days stepper, meal pills, mode), gradient-brand Generate CTA + ghost re-use shortcut.

VARIATION 02 · STATE

Generating · resolving

Brand orb pulses while the engine cooks. Four-step progress card on white shows live status with the third step spinning. Resolves in ~3s.

VARIATION 03 · STATE

Results · 3 plans

Inputs echoed as small pills. Three plan cards stack. Top card (highest fit %) carries the success border + TOP badge. Each card carries summary, detail row, macro fit bar, primary View plan CTA. Regenerate + Tweak inputs row beneath.

MOCKUP NOTES · STEP 4

HERO ILLUSTRATION · V1

Five fanned-out day-cards floating in a soft brand-tinted gradient — each card carries a day-of-week label and three macro-color dots representing the planned meals. The little gradient-brand sparkle in the corner telegraphs the AI generation. CSS-only. ChatGPT Images 2.0 swap-in is optional.

FORM CONTROLS

Three sections inside one card: **Days** (stepper, default 5, range 1-7) · **Meals per day** (chip cluster: Breakfast / Lunch / Dinner / Snacks — multi-select, defaults to all four) · **Mode** (3-card segmented: Fast ≤25min / Balanced / Big-batch). The stepper value uses `bg.elevated` so it reads like a verdict, not an input.

GENERATING · V2

180pt brand-gradient orb with concentric rings — the “engine cooking” surface. Headline “Mapping 3 plans for your week” with the gradient-text accent. Below: a 4-step progress card — Pulling your macros (done) · Filtering your sources (done) · Resolving for variety (active spinner) · Ranking by fit (pending). Engine takes 3-5 sec in practice.

RESULTS · V3

Inputs echo as small pills at top (5 days · 4 meals · Fast). Three plan cards stack. Top card (highest fit %) carries the success border and a “TOP” badge inside the label row. Each plan: bold one-line summary (“Higher protein, lighter dinners”), fit % pill, detail row (avg kcal/meal · avg prep · grocery items), and a tri-color macro fit bar showing the protein/carbs/fat split. Primary “View plan” CTA + ... more. Bottom of frame: Regenerate + Tweak inputs row.

Grocery List

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M19 Grocery List

Promoted from approved wireframe § 3.19 V1 (standard category sections — safest default). Three states: mid-shop with items partially checked, post-onboarding empty state with quick-start options, and the long-list collapsed view.

iPhone 15 Plus · 283 × 482 pt
Pushed · tab Lng active
Source · Meal Plan A

variation 01 · STATE

Mid-shop · partial

31% complete. 8 of 26 items checked across four categories. Active "All" filter. Produce category top with three items struck through.

variation 02 · STATE

Empty · first-time

Post-onboarding, no plan yet committed. Centered basket illustration, two-button stack offers either pull-from-plan or build-from-scratch, recent lists exposed beneath.

variation 03 · STATE

Long list · collapsed

42-item list from a 7-day plan. Categories render as tappable cards with live counts; Produce expanded shows the open state. Bulk-check button joins the bottom bar.

MOCKUP NOTES · STEP 4

HEADER

Back / Title / Share / ... carries the source ("From Plan A — 5 days") and the inverted progress strap below shows mid-shop status with a 44pt brand-green ring + check count + source pill.

FILTER CHIPS

"All" / "To-buy" / "Got it" / "Pantry" — pivot the list by check state. Default lands on "All"; tapping "To-buy" hides checked items.

CATEGORY HEADS

Small-caps section headers with a 8pt color dot per category: Produce → success-green, Protein → error-red, Dairy → info-blue, Pantry → warning-amber, Other → text-secondary neutral. Count on the right shows N of M done (DM Sans tabular).

ITEM ROWS

Checkbox + name + sub-source line (recipe / plan that contributed it) + trailing qty. Tap a row anywhere → toggle done; done items strike through and drop to muted text. Long-press → quick-edit popover with delete / move category / change qty.

ADD ROW

Dashed-border "+" Add item" row appears at the bottom of every populated category for quick custom additions.

EMPTY STATE · V2

Centered CSS basket illustration on a soft brand-tinted gradient. Headline "Nothing on your list yet." with a two-button stack (gradient-brand "Pull from this week's plan" + ghost "Build from scratch"). Below: quick-start chip listing prior grocery lists with item counts — one-tap restore. No tab bar — keeps focus on the action.

COLLAPSED · V3

Category headers render as tappable cards with the dot, name, "N of M done" count, and a chevron. Tap to expand inline. Best for long lists (>30 items) where the user wants to swipe section by section. The "Produce" section shows open state; the others stay closed.

BOTTOM BAR

Sticky two-button bar; gradient-brand primary "Check out" (exports as text or sends to grocery app integration at Phase 2) + ghost "Share" (sends as iMessage / WhatsApp). On V3 it adds a "Bulk check" button for power users.

Coach Chat

FUELWELL • PHASE 0.5 • STEP 4 — MOCKUPS

M20 Coach Chat • Coach tab

Promoted from approved wireframe § 3.20 V1 (standard bubbles + inline learn cards). Three states: mid-conversation with the engine threading numeric context, an empty first-session screen with seed prompts, and the voice-mode immersive overlay.

iPhone 15 Pro • 393 × 852 pt
Tab • Coach
Voice • long-press mic

Variation 01 • STATE Mid-conversation

Coach opens with today's macro gap context (dark inline tile), user asks what to eat, coach picks a recipe and embeds the recipe card inside its bubble. Three quick-reply chips beneath.

Variation 02 • STATE First session • seeds

No prior thread. Personalized greeting with gradient-text accent, time-aware context pill, four seed-prompt cards in a 2x2 grid, and two italic example prompts at the bottom.

Variation 03 • STATE Voice mode • listening

Long-press mic launched the dark overlay. 200pt brand-gradient orb, live transcript with the streaming word in brand-green, audio waveform, end-call button bottom-center.

MOCKUP NOTES • STEP 4

TOP BAR	30pt purple coach avatar with the brand-green online pulse beneath. "Coach" name in Inter 700 13pt. Trailing "New" link starts a fresh thread (info-blue, no border — feels iMessage-native).
BUBBLES	Coach left: white with 1pt hairline, 20pt rounding except a tightened bottom-left corner. User right: bg.elevated with white text, mirrored corner. Embedded cards live inside the coach bubble — the dark macro tile or the recipe-thumb chip.
QUICK REPLIES	3-chip row hanging beneath the avatar column (offset 34pt). Primary chip uses gradient.brand ; secondaries are white with hairline. Disappears once one is chosen.
COMPOSER	+ button (open camera / log a meal / pick from library), pill-shape field with mic glyph inside, gradient-brand send. Placeholder: "Ask me anything about today..." — the most important copy on the screen. Send disables to dim-dark until text is present.
EMPTY / FIRST-SESSION • V2	Personalized headline "Hi Jordan, how can I help? " with gradient-text accent. Context pill ("Friday • 3:42 PM • 714 kcal left"). 2x2 grid of seed-prompt cards (icon + one-line question, tinted-square icon), and a small "Try saying..." card with two example prompts in italic. No prior thread shown.
VOICE MODE • V3	Long-press mic → dark gradient overlay. 200pt orb pulses while listening, brand-green LISTENING label up top, live transcript in Outfit 700 24pt with the actively-streaming word highlighted brand-green. Audio waveform beneath. Bottom: keyboard switch, end-call (error-red), and speaker toggle.

Learn home (legacy — content now in Help)

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M21 Learn Home · Learn tab

Promoted from approved wireframe § 3.21 V1 (categories carousel + featured list). Three states: default with continue-reading, the engine "For you today" ranking (Learn-tab differentiator), and search-active with substring matches.

iPhone 15 Pro · 393 × 852 pt
Tab · Learn
Articles · 3-min read max

variation 01 · STATE

Default · browse

Categories carousel up top, continue-reading row with progress, three featured articles. Engine quietly flags the top featured with a green fit chip.

variation 02 · STATE

For-you · ranked

Engine has a strong pick. Dark for-you hero card with the "Why now" rationale + gradient-brand Read button. Three more fit-ranked articles below with green fit-pct chips.

variation 03 · STATE

Search · "protein"

Focused search with caret, category chips for scope. 8 substring-highlighted matches. Coach-suggested article tail surfaces an in-budget article that didn't match.

MOCKUP NOTES · STEP 4

CATEGORIES CAROUSEL

132pt cards in a horizontal scroll. Each card carries a category-tinted 36pt icon, name in **Inter 700** 13.5pt, and a count "12 articles." A subtle radial-gradient tint in the top-right corner of each card uses the category color at low alpha — nutrition green, macros green, eating-out warm-amber, recovery purple.

CONTINUE READING

Single white row with a 56pt thumbnail, eyebrow "CONTINUE READING," title, then a gradient-brand progress bar with the percent. Renders only if the user has an article in progress.

FOR-YOU HERO · V2

Replaces the carousel as the first surface when the engine has a strong recommendation. Dark elevated card with the brand-green pulse + "FOR YOU TODAY" eyebrow, the article title in **Outfit 700** 19pt, and a "Why" strap explaining the engine's reasoning. Trailing gradient-brand "Read · 3 min" pill.

FEATURED LIST

72pt thumbnail with a corner category pill on a saturated brand-tinted gradient, then title (2-line clamp), one-line summary, meta row (X min · category · optional engine-fit chip). Each thumb uses its category color for instant scanning.

SEARCH ACTIVE · V3

Tail focused search field with caret. Below: category chips for narrowing the scope, then matched articles with substring highlighted yellow. "Suggested by Coach" tail surfaces an article that didn't match the query but the engine thinks is more useful for today's macros.

Article Detail

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M22 Article Detail · "The 1g protein rule"

Promoted from approved wireframe § 3.22 V1 (hero + body + takeaway). Three states: default top of article, mid-scroll with sticky takeaway, and the typographic Reading mode with the takeaway as a centered moment.

iPhone 15 Pro · 393 × 852 pt
Pushed · tab Learn active
Article · 3 min read

MOCKUP NOTES · STEP 4

HERO · V1	16:9 photo with the category pill ("MACROS") in the top-left. Floating glass back / share / heart-saved nav overlays the hero — they collapse into the frosted compact nav as the user scrolls.
TITLE + META	Outfit 700 24pt title, 1.18 line-height. Meta row: read time (DM Sans), category pill, publish date · author. Reading-progress hairline lives just under the status bar and fills <code>gradient.brand</code> as the user scrolls.
BODY TYPE	V1/V2 use Inter 400 15.5pt at 1.62 line-height — the smart-friendly body voice. The lead paragraph bumps to 17pt 500 to set the tone. V3 switches to Lora 400 17pt 1.65 with italic h2s — the immersive Reading mode.
PULL QUOTE + NUMBER CALLOUT	Pull quote: 3pt success-green left accent on a 5% green tint, with one phrase getting the green-blue gradient-text accent. Number callout: white card with the standout figure in DM Sans 700 40pt + a one-sentence explanation — used once per article max to surface "the number" the article is built around.
INLINE IMAGE	4:3 ratio, 16pt radius. One per article max per spec. Captions sit as small glass pills inside the image.
TAKEAWAY CARD · CORE MOMENT	Dark elevated card. "ONE THING TO TRY TODAY" eyebrow with the brand-green pulse, the action statement in Outfit 600 19pt with the operative phrase in gradient-text. Primary "Try it" · log a 30g lunch" gradient-brand CTA + ghost "Skip for now" button. The single mandatory element of every article.
STICKY TAKEAWAY · V2	Mid-scroll, the dark takeaway pins above the tab bar in a compact form — label + action + small gradient pill CTA — so the "one thing to try" is never out of reach. Returns to inline-card form once the user reaches the end of the article.
READING MODE · V3	No hero; an opaque sticky title bar replaces it. Body type swaps to Lora, drop-cap on the lead paragraph. Takeaway breaks out of the narrow column slightly with a wider full-width card — designed to read as a beat in the article rather than a CTA add-on.

Exercise & Activity hub

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M32 Exercise & Activity · tab landing

Hub screen reached from the Exercise tab in the v2 bar. Today's workout (or rest-day card) hero, this-week strip. Quick access link list, and recent workouts. Three variations explore list vs. grid Quick-access density and a more visual recent-workouts treatment.

iPhone 15 Pro · 393 × 852 pt

Tab: Exercise & Activity

Routes: M32 workout detail, History, plans

VARIATION #1 Spec primary · list Quick-access

Strength · Push as today's workout hero, this-week strip below, grouped list of 6 destinations, three recent rows.

VARIATION #2 2-col Quick-access grid

Same hero, but Quick access surfaces as a 2-column card grid — more visual, easier to scan icons quickly

VARIATION #3 Rest-day hero · horizontal recents

Today is mobility/rest; hero flips to the light "Active Rest" treatment. Recent workouts become a horizontally-scrollable card row.

VARIATION #1 · EMPTY

Hero swaps to the coach-voice prompt with [Coach suggest] [Browse plans]. Week strip reads all-rest. Recent rows collapse to a dashed coach-voice line.

VARIATION #2 · EMPTY

Grid Quick-access still feels welcoming — empty days, empty recents, but the destinations are present and tappable.

VARIATION #3 · EMPTY

V2's rest-day hero collapsed to the same coach-voice prompt; the horizontal recents become an empty section.

MOCKUP NOTES · M32 EXERCISE TAB LANDING

HEADER

Display 700 26pt title "Exercise & Activity" with a small day-stamp sub-line ("Fri · 5 days this week"). Trailing 36pt + button uses `gradient.brand` for the primary quick-add. No back chevron — tab roots never have one.

TODAY'S WORKOUT HERO

Inverted `bg.elevated` surface with an orange radial wash (the training accent), display 700 22pt workout name, three info chips (duration, lifts, projected kcal), and an orange "Start workout" CTA. Rest-day flips to a light surface; pulse dot drops to `text.disabled`; CTA becomes ghost "Add a workout".

THIS WEEK STRIP

Horizontal scroll of 7 chips. Today reads as the inverted dark chip with the orange status pill ("Workout"); other days carry a light pill colored by their status (workout · rest · upcoming). Minutes line beneath. The strip wraps Mon-Sun and is sticky-scrollable horizontally.

QUICK ACCESS

Six destinations per spec: Workout Log, Activity Tracker, Workout Plans, Exercise Library, Schedule, Trainer workouts. V1 & V3 render as a single grouped list (iOS-pattern). V2 renders as a 2-column card grid for visual scan. Icons follow semantic tones — orange for workout/plans, info-blue for tracker, premium-purple for library, success-green for schedule, warning-amber for trainer.

RECENT WORKOUTS

Last 3 logged sessions. V1 compact rows (name · date · duration + kcal trailing). V2 same row pattern (rows are easier to scan in two-pane layouts). V3 a single horizontally-scrolling cards row, swipeable.

EMPTY STATE (FIRST-TIME)

Hero swaps to a coach-voice prompt: No workouts logged yet. Want a quick suggestion from coach, or pick a plan? Two CTAs side-by-side: gradient.brand `Coach suggest` and ghost `Browse plans`. This-week strip still renders (chips read "rest" / "upcoming"). Recent-workouts section collapses to a dashed coach-voice placeholder.

Workout Detail (pre + active + summary)

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M25 Workout Detail · Push day

Promoted from approved wireframe § 3.25 V1 (hero dominant). Three states: pre-workout detail with the verdict + 3 stat tiles + exercise list, no-workout-planned empty state, and the dark in-workout view with the live rest timer.

iPhone 15 Pro · 893 × 452 pt
Pilot — manual entry
Template — Push day

variation 01 · STATE

Pre-workout · default

16:9 dark hero with the bar-and-plates illustration. Coach context card, 3 stat tiles, 7-exercise list with bench press marked active. Sticky gradient-brand Start workout at the bottom.

variation 02 · STATE

No workout planned

Empty-state card with the info-blue icon ring and rest-day promise. Two CTAs (Browse templates / Add custom), 7-day week strip beneath, and a Recent re-run list.

variation 03 · STATE

In-workout · set 3

Dark immersive view. Exercise 2 of 7, sets table with two done sets struck through, set 3 active with brand-green input chips. 40pt rest-timer ring showing 1:18 left. Log set primary at the bottom.

MOCKUP NOTES · STEP 4

HERO

16:9 dark gradient with a bar + plates illustration drawn in CSS. "PUSH DAY" eyebrow + Outfit 700 28pt name overlaid bottom-left; glassy back / share / save nav floats top.

COACH VERDICT

White card with a 3pt success-green left rail and the purple coach avatar. Two-line context referencing today's macros — "Last push session was 3.2k volume; today you've got +220 kcal headroom after this." Replaces the engine "verdict" since Pilot is manual-entry only.

STAT TILES

Three cells: Volume (3.4k lb projected) · Sets (24) · Est. time (55 min). DM Sans tabular numbers. Same vocabulary as the Dashboard.

EXERCISE LIST

7-exercise card. First row is the active starting point with a 3pt success-green left rail + dark numbered tile. Each row: name, set/rep meta line ("4 sets · 8-12 reps · last 135 lb"), trailing weight target stack. Tap to drill into edits.

STICKY START

56pt gradient-brand pill above the bottom edge with the green-halo shadow. Tap fires `haptic.commit` and transitions to the V3 in-workout view.

IN-WORKOUT · V3

Dark immersive. Step progress bars up top, "Exercise 2 / 7" eyebrow + "Bench press" headline in Outfit 30pt, target chips (4 sets · 8-12 reps · 135 lb). Sets table: 5 columns (#, weight target, reps target, weight done, reps done) with done sets struck through, active set highlighted with the brand-green ring + green-tinted input fields. 40pt rest-timer strap shows 1:18 remaining with a brand-green ring + Skip pill. Bottom: prev / Complete set / next.

EMPTY · V2

No workout planned today: Info-blue ring icon + "No workout planned." copy + a two-button row (gradient-brand "Browse templates" + ghost "Add custom"). 7-day week strip beneath shows the rest of the week's scheduled workouts so the user can navigate to a future day.

Progress overview v2

Progress overview v1 (reference)

FUELWELL · PHASE 0.5 · STEP 4 — MOCKUPS

M23 Progress overview · Progress tab

Promoted from approved wireframe § 3.23 V1 (weekly card-stack). Three states; weekly default with the verdict-first stat lines, 90-day view with full trend and photo grid, and the empty post-onboarding promise card.

iPhone 15 Pro · 393 × 852 pt
Tab · Progress
Default · Weekly

MOCKUP NOTES · STEP 4

RANGE SELECTOR

Segmented Weekly / Monthly / 90-day / All. Defaults to **Weekly** per Max — daily noise discourages, weekly is where signal lives. Inactive options on the `bg.borderSoft` track; active flips to `bg.elevated` + 700.

WEIGHT CARD · VERDICT-FIRST

Eyebrow + "+ Add weight" pill on the right (gradient-brand when missing today's entry). Stat line first — **DM Sans 700** 32pt current value + a green/amber delta chip (~1.2 lb · WoW). Chart underneath as supporting data, 7-day SVG line chart with the current point dotted in success-green; today's data point gets a 3pt halo.

MACRO ADHERENCE CARD

7-column stacked-bar chart by day. Each column shows the % adherence per macro stacked (protein-green / carbs-amber / fat-purple) with a top-of-bar miss segment in neutral. Percent number underneath each day in DM Sans tabular. Legend strip at the bottom carries weekly averages.

90-DAY VIEW · V2

Range flipped to 90-day. Weight card chart becomes a denser line with a brand-green target zone shaded behind the actual trend. Stat shows total (~3.8 lb · 90 days) + weekly average. Photo grid expands from a 3-tile this-week strip into a 4-column timeline of 8 progress photos with date labels. Measurements list appears beneath (waist / hips / chest with trend arrows).

EMPTY / V3

Range dimmed. Dark "WHY WEEKLY" promise card with the brand-green pulse, copy explaining the weekly-trend rule, and three entry actions (gradient-brand "Add weight" + ghost "Add photo" / "Log mood"). Below it: dimmed skeleton versions of the weight and adherence cards as placeholder shape — never reads broken, always reads "data coming."

Tab bar component (Coach centered)

NEW

FUELWELL · ROUND 2 · STEP 4 — MOCKUPS

M37 Tab bar · isolation lock

Standalone treatment study of the v2 tab bar, rendered at iPhone width on a neutral light background. Five tabs left-to-right: **Home · Meals & Nutrition · Coach · Exercise & Activity · Progress**. Coach is the focal point — visually distinct even when not the active tab. Two variations × four states (Home active, Coach active, Exercise active, inactive baseline).

iPhone 15 Pro · 393pt wide
Tab bar · 88pt tall · 30pt safe inset
Coach icon raised 22pt above row

VARIATION 01

Speech-bubble Coach

Round-2 canonical, 54pt rounded-square bubble with a tail at bottom-left, dark #0F1117 inactive fill, white SF symbol. Active state swaps to gradient.brand fill + green-glow shadow — the bubble visually lights up.

STATE 01
Home tab active
Default app launch - Dashboard root

STATE 02
Coach tab active
Speech bubble lights up - gradient.brand fill (V1) / green-glow ring (V2)

STATE 03
Exercise tab active
Second-tier - standard line-fill swap

STATE 04
Inactive baseline
Splash / transition - no tab marked active. Coach retains its distinct shading.

VARIATION 02

Raised circle · FAB-style Coach

54pt circle treated like a primary FAB embedded in the bar, gradient.brand fill with a green-glow shadow at rest; active adds a 4pt translucent green ring; the splash/transition state falls back to dark #0F1117.

STATE 01
Home tab active
Default app launch - Dashboard root

STATE 02
Coach tab active
Speech bubble lights up - gradient.brand fill (V1) / green-glow ring (V2)

STATE 03
Exercise tab active
Second-tier - standard line-fill swap

STATE 04
Inactive baseline
Splash / transition - no tab marked active. Coach retains its distinct shading.

MOCKUP NOTES · M37 TAB BAR LOCK

GEOMETRY

88pt tall standard iOS tab bar with a 30pt home-indicator safe-area inset at the bottom. Five equal columns. Coach column is the same width as the others — the visual prominence is achieved by lifting the icon, not by stretching the cell. Coach icon container is 54pt and rises 22pt above the row baseline so the bottom of the container still tucks behind the bar's blur surface.

VARIATION 1 · SPEECH BUBBLE

The Round-2 canonical, 54pt rounded square with a 6pt bottom-left corner radius (the other three corners at 18pt) plus a 12pt rotated-square tail at the bottom-left, creating a chat-bubble silhouette. Inactive fill: `color.bg.elevated #0F1117`, white SF symbol glyph (`bubble.left` and `bubble.right.bl`). Active state swaps to `gradient.brand` fill with a green-glow shadow ramp — the chat bubble lights up.

VARIATION 2 · RAISED CIRCLE (FAB-STYLE)

54pt circle. Default fill is `gradient.brand` with a green-glow shadow — the FAB-style affordance reads as a primary action embedded in the bar, similar to Snapchat's old camera tab. Inactive baseline variant drops to dark `#0F1117` with a softer shadow (used during onboarding splashes / transitions). Active state keeps the gradient and adds a 4pt translucent green ring as the focus indicator.

OUTER TABS (HOME · PROGRESS)

SF symbol line glyphs: `house` / `chart.line.up.trend.xyaxis`. Fill switches to `house.bl` / `chart.bar.bl` when active. Label color is `text.muted` when inactive, `text.primary` when active.

SECOND-TIER TABS (MEALS · EXERCISE)

Sit immediately left/right of Coach. SF symbols: `fork.knife` / `figure.run`. Same color/fill rules as the outer tabs. They borrow no visual prominence from Coach — the spacing alone signals their proximity to the centerpiece.

STATES RENDERED

Top to bottom: **State 01** Home active (default app launch). **State 02** Coach active — the centerpiece lights up. **State 03** Exercise active — second-tier tab. **State 04** Inactive baseline — no tab is "active" (splash / route transition). Coach retains its distinct shading across all four states.

SPECS

Bar height — 88pt (incl. 30pt safe inset)

Coach lift above row — 22pt

Standard tab glyph — 26pt bounding box

Active text — `color.text.primary`

Coach icon container — 54pt

Coach corner radius — 18 18 18 6 pt (V1) 50% (V2)

Label type — Inter 600 · 10pt · +0.02em

Inactive text — `color.text.muted`

Sign-off

Both reviewers approve the App Map v2, the Flow Chart v2, the 27 Round 1 mockups in their new homes, and the 10 Round 2 mockups. Once signed, this becomes the locked spec for Phase 0.6 (Interactive Prototype) and Phase 1 (iOS build).

Robert

DATE

Max

DATE

After sign-off, commit a short entry to `docs/ios-guide/decisions.md` with the date and any conditions, then merge PR #27 to `main` and open Phase 0.6.
