SPEC DOC

App Map v2.1

Tab structure, screen inventory, navigation rules.

FuelWell — App Map v2.1 (Phase 0.5 · Step 1)

Version: 2.1 (2026-05-21 — Phase 0.5.3 consolidation)

Status:  APPROVED v2 — Robert reorganized the IA 2026-05-19 after the Round 1 mockup review. Max's Step 2 blockers resolved. All 27 Round 1 mockups stay; they're re-homed in the new tab/menu structure. v2.1 layers in the D1-D19 consolidation pass from the Phase 0.5.3 final review (see `decisions.md`).

What changed from v1 → v2:

- Tab bar: `Home · Log · Coach · Learn · Progress` → `Home · Meals · Coach · Exercise`
• `Progress` (single-word labels in the bar per D9; full names "Meals & Nutrition" and "Exercise & Activity" appear as screen titles on the hub landings)
- Coach is the centerpiece tab — visually distinct (speech-bubble icon, inverted shading)
- "Learn" tab dissolved into the new **Help** screen, accessed from the Dashboard top bar
- New top-level navigation surface: a **hierarchical Menu** (Tools / Coach / Settings / Help / About)
- Dashboard adopts **Max's Tier 1/2/3 framework** — max 3 elements above the fold
- New Dashboard widget: **Inflows/Outflows** (dual concentric ring with day/week/month/year toggle)
- New per-tab landing pages: **Meals/Nutrition hub** and **Exercise & Activity hub** (the old "Meal Log day view" and "Workout Detail" are sub-pages under these)
- Nothing is deleted — every Round 1 screen has a new home

Root principle (PRINCIPLES.md): Dashboard is the root. Every other screen exists to serve the Daily Loop — *Dashboard* → *Log* → *Adjust* → *Continue* → *Repeat*.

1. Entry sequence — Onboarding (pre-tab)

Unchanged from v1. Nine sequential steps; runs once per user.

```
FuelWell (splash)
  → Sign in / Register
    | — First-time → Onboarding → existing 9-step flow
    |   1. Welcome
    |   2. Sign in / Sign up
    |   3. Goal selection
    |   4. Body baseline
    |   5. Dietary constraints
```

```

6. Lifestyle
7. HealthKit permission
8. Notification permission
9. Your Plan reveal
  → Dashboard (Daily Loop starts)
└─ Returning → Dashboard direct

```

2. Tab bar — five tabs, Coach centered

Tab-bar labels are single words per D9 (Home · Meals · Coach · Exercise · Progress). Full names ("Meals & Nutrition", "Exercise & Activity") only appear as the screen titles on the hub landings.

Order	Tab label (in bar)	Hub screen title	Visual treatment	Tier
1 (leftmost)	Home	Dashboard	Standard SF Symbol <code>house.fill</code>	Outer
2	Meals	Meals & Nutrition	Standard SF Symbol <code>fork.knife</code>	Second
3 (center, prominent)	Coach	Coach Chat	Raised-circle FAB-style container (D6), inverted <code>bg.elevated #0F1117</code>, slight elevation	Centerpiece
4	Exercise	Exercise & Activity	Standard SF Symbol <code>figure.run</code>	Second
5 (rightmost)	Progress	Progress	Standard SF Symbol <code>chart.line.uptrend.xyaxis</code>	Outer

The Coach tab is always visually distinct, even when inactive. The rest follow iOS standard active/inactive coloring.

3. Dashboard — Tier 1/2/3 framework (Max's blocker resolved)

The Home tab root. Top bar carries Menu (left) and Help (right). Max's hard ceiling: **maximum 3 visual units above the fold**.

Tier 1 — always above fold

Element	Why Tier 1
Health Score hero	Single most important signal of how the user is doing. Includes 30-day delta and "Why?" expander.
Inflows/Outflows widget (dual concentric ring)	Creative energy-balance visual. Outer ring = calories in by macro; inner ring = calories out by source (BMR / activity / workout). Center = net. Toggles day/week/month/year.
Verdict-of-the-moment CTA	One-line "what should I do right now" with a primary action. The Daily Loop's entry point.

Tier 2 — visible on first scroll

- Activity overview card (workouts logged, active minutes, calories burned, mini weekly bar)
- Nutrition/Meals overview card (today's meals snapshot, remaining macros bar)
- My day / week / month view (segmented timeline of intake vs. expenditure over the chosen window)

Tier 3 — progressive disclosure (deeper scroll or expanded states)

- Progress overview summary (sparkline + trend line)
- Daily Recap card (appears only after 8pm — also triggered as a push and accessible from the Menu)
- Coach nudge card (event-driven — appears only when a trigger fires; otherwise hidden)

Habit Tracking is NOT on the Dashboard in v2. It lives in the Progress tab and in the Menu under Tools > Tracking.

§ Day 1 Dashboard welcome mode (D7)

The Dashboard has two co-existing states. The populated state described above is the canonical Dashboard. On the user's first session, before any meals or workouts have been logged, the Inflows/Outflows ring is replaced by a single large welcome card:

- **Welcome card copy:** "Start here: log your first meal" (primary CTA).
- **Trigger:** zero logged meals AND zero logged workouts for the current user.
- **Collapse rule:** the welcome card auto-collapses after the first meal is logged; the canonical Inflows/Outflows ring takes its place on the next Dashboard render.
- **Tier 1 contract honored:** the welcome card occupies the Tier 1 slot that the Inflows/Outflows ring normally holds; Health Score hero and Verdict CTA remain visible.
- **Health Score during welcome mode:** still renders its day-1 fallback ("Building your baseline — 7 days of data unlocks your Health Score") with a placeholder ring.

§ Health Score component notes (D11, D14)

- **Recovery baseline (D11):** Recovery is computed off a 14-day rolling average of resting heart rate. Before 14 days of wearable data exist, Recovery is *excluded* from the Health Score and the remaining four components proportionally re-weight (same mechanism as the missing-component rule in § 8). The Health Score detail screen surfaces this explicitly with the copy: "Recovery unlocks with wearable data (Apple Watch or compatible device)" — not a silent reweight.
- **Cause-first delta framing (D14):** the Dashboard hero and the Health Score detail screen render score deltas in cause-first form, not numeric-first. Example: "↓ sleep variance this week" rather than "↓ -2.3 vs last week". The numeric delta still exists internally for telemetry; it just isn't the lede in user-facing copy.

4. Menu — hierarchical navigation (new in v2)

Opened from the hamburger icon top-left of Dashboard (and any screen via the universal Menu icon). Full-screen sheet with grouped sections.

D4 — hierarchical-collapsed by default. Single-pane view. Categories visible by default (Snapshot · Tracking · Meals · Training · Coach · Settings · Help · About); each expands on tap. No two-tier tile redesign. Larger text and less whitespace than v1.

USER HEADER (avatar · name · goal pill · today's Health Score)

TOOLS

- Snapshot
 - Health Score
 - Daily Recap
 - Inflows / Outflows
 - My day · week · month
- Tracking
 - Habits
 - Weight history
 - Body photos
 - Measurements
 - Mood & energy
- Meals
 - Meal Log
 - Recipe Browser
 - Meal Plan Generator
 - Grocery List
 - Restaurant Guidance
 - Macro history (D12 — deep-link to Progress , Macro adherence; no standalone screen)
- Training
 - Workout Log
 - Activity Tracker
 - Workout Plans
 - Exercise Library
 - Schedule

COACH

5. Help screen — replaces the v1 Learn tab

Accessed from the Help icon top-right of Dashboard. Single screen that combines:

- **Search bar** — "Search articles, settings, or ask a question"
- **Featured article today** — hero card with image, 3-min read pill
- **Categories** — Nutrition basics · Macros explained · Eating out · Recovery · Training fundamentals · Sleep & energy · Mindset
- **Continue reading** — articles started but not finished
- **Quick settings** — Notifications, HealthKit, Account, plus "All settings →"
- **Talk to coach** — small card linking to Coach Chat
- **Send feedback** — text-link

Article tone (carried over from v1 Learn): ≤3-minute reads, smart-friend voice, every article ends with a "One thing to try today" actionable takeaway card.

6. Tab landings (new in v2)

Each non-Home tab opens a **hub landing page** that surfaces sub-pages, not a single screen.

6.1 Meals & Nutrition tab landing

Section	Content
Hero	Today's plate — compact Inflows/Outflows ring + remaining macros bar

Section	Content
Today's meals	Logged meal rows + pending dinner slot
Quick access	Meal Log · Restaurant Guidance · Recipe Browser · Meal Plan Generator · Grocery List · Macro History (deep-link → Progress > Macro adherence per D12)
Recent foods	Horizontal scroll of recent meal chips for one-tap re-log

6.2 Exercise & Activity tab landing

Section	Content
Hero	Today's workout card OR Rest day card
This week	Day chips with workout/rest indicators and minutes
Quick access	Workout Log · Activity Tracker · Workout Plans · Exercise Library · Schedule · Trainer workouts (manual entry)
Recent workouts	Last 3 logged workouts

6.3 Progress tab landing (v2)

Default time range: weekly.

Section	Content
Health Score trend	Current score + 30-day delta + sparkline. Tap → Health Score detail.
Weight	Line chart of weekly averages + "Add weight"
Macro adherence	Weekly bar chart + summary
Body photos	Horizontal scroll + "Add photo"
Measurements	List with weekly trend arrows
Mood & energy	Weekly average + small heatmap
Habit Tracking	Compact dot grid (last 14 days × 4 habits) + "View all habits" link

6.4 Coach tab

Coach Chat. Inline Learn cards expand within the chat (the article surface remains in Help, but contextual cards are also surfaced inline).

7. Screen inventory v2 — 29 top-level screens (17 from v1 re-homed + 12 new/elevated; Macro History removed per D12, Learn home retired per D10)

New in v2 marked with ★ . Re-homed from v1 marked with ↵.

Home tab

#	Screen	Notes
1	Dashboard v2 ★	Tier 1/2/3 layout per Max
2	Daily Recap / Coach Summary ↵	Reachable from Dashboard card, 8pm push, and Menu
3	Your Plan / Profile ↵	Recalc confirm modal
4	Settings ↵	Reachable from Menu and Help
5	Menu (hierarchical sheet) ★	New navigation surface
6	Help screen ★	Replaces v1 Learn tab
7	Inflows/Outflows full screen ★	Sankey-style flow diagram, daily/weekly/monthly/yearly
8	Health Score detail ↵	Composite breakdown
9	Habit Tracking detail ↵	Reached from Menu and Progress

Meals & Nutrition tab

#	Screen	Notes
10	Meals & Nutrition hub ★	Tab landing
11	Meal Log day view ↵	Persistent floating add button
12	Add Meal sheet ↵	Photo default
13	Food Detail / Portion editor ↵	Sheet
14	Restaurant Guidance ↵	Curated chain DB
15	Restaurant Detail ↵	Coach picks at top
16	Recipe Browser ↵	Leads with remaining-macros section
17	Recipe Detail ↵	Add to Grocery / Log as meal
18	Meal Plan Generator ↵	Three options, single-line summaries
19	Grocery List ↵	Grouped by category

Macro History (D12) — deep-link, not a screen. The Meals & Nutrition hub's "Macro History" row deep-links to **Progress → Macro adherence** detail. There is no standalone Macro History screen at Pilot. The Meals & Nutrition hub still surfaces the row; the destination is Progress, not a new screen.

Learn home (D10) — retired in Phase 0.5.3. The v1 "Learn home" screen (Screen 31, slug `21-learn-home`) is not shipping at Pilot. All article content is reachable through the Help screen and inline Learn cards in Coach Chat.

Coach tab

#	Screen	Notes
21	Coach Chat 🗨️	Soul of the app, "Ask me anything about today..." placeholder
22	Article Detail 🗨️	Reachable from Help and inline from Coach Chat

Exercise & Activity tab

#	Screen	Notes
23	Exercise & Activity hub ⭐	Tab landing
24	Workout Detail 🗨️	Active session: pre-workout + in-progress + summary
25	Workout Log ⭐	History view of past workouts
26	Activity Tracker ⭐	Passive activity from Apple Health
27	Workout Plans ⭐	Library / templates
28	Exercise Library ⭐	Searchable exercise reference
29	Schedule ⭐	Week / month view of planned workouts

Progress tab

#	Screen	Notes
30	Progress overview v2 🗨️	Weekly default; surfaces Health Score, weight, macros, photos, measurements, mood, habits

Sheets / modals (not counted as screens): Food Detail editor, Recipe → Grocery confirm, Photo Capture, Measurements Entry, Mood Entry, Recompute Plan confirm, Workout Set Logger, Habit Toggle, permission prompts, Inflows/Outflows lane drill-down sheets.

Anti-pattern reminder (DESIGN.md): no celebratory streak chips, badges, or gamification. The Habit grid is a *visualization*, not a reward. The Health Score is a *diagnostic*, not a score-to-beat.

8. Health Score v1 formula (Max's blocker resolved)

Component	Weight	Source
Nutrition adherence	35%	% of days within macro targets, rolling 7-day window
Training consistency	25%	Workouts completed vs. planned, rolling 7-day window
Sleep	20%	Average sleep duration + consistency, rolling 7-day window
Recovery (HRV / RHR)	10%	HRV trend + resting HR vs. baseline, rolling 7-day window
Body comp trend	10%	Weight + body fat % movement vs. goal direction

- **Range:** 0–100
- **Missing components:** *excluded* — remaining components re-weighted proportionally. No penalty zeros.
- **Day-1 fallback:** display "Building your baseline — 7 days of data unlocks your Health Score" with a placeholder ring. No score number rendered.
- **Score is a diagnostic, not a competition.** No leaderboards, no "your friends scored X" comparisons, ever. (Internal terminology — user-facing copy avoids "diagnostic" per D1.)
- **Recovery baseline (D11):** Recovery uses a 14-day rolling average of resting HR. Until 14 days exist, Recovery is excluded and the other four components re-weight proportionally. Detail screen renders: "Recovery unlocks with wearable data (Apple Watch or compatible device)" — explicit, not silent.
- **Delta framing (D14):** cause-first on Dashboard hero and Health Score detail. "↓ sleep variance this week", not "↓ -2.3 vs last week".

9. Empty states — required on every screen (Max's blocker resolved)

A thoughtful empty state is a brand moment, not a placeholder. Every screen below has an empty-state copy line in coach voice.

Screen	Trigger	Empty-state copy
Dashboard	Day 1, no data	"Welcome — your day starts here. Log your first meal whenever you're ready."
Health Score	<7 days of data	"Building your baseline — 7 days of data unlocks your Health Score."
Inflows/Outflows	No meals or workouts logged today	"Log your first meal or workout to see your energy flow."
Meal Log	Day 1, no entries	"No meals logged yet. The fastest way is a photo — tap the + below."
Add Meal (Search)	No recent foods	"Start typing — we'll pull from your previous meals and the food database."
Recipe Browser (for-macros)	No saved recipes that fit today	"Nothing in your saved recipes fits today's remaining macros. Want a fresh meal plan, or browse all?"
Meal Plan	No plan generated this week	"Tell us your week. We'll generate three options."
Grocery List	Empty	"Your list is empty. Generate a meal plan or add items below."

Screen	Trigger	Empty-state copy
Restaurant Guidance	No location granted	"We can show top picks anywhere — grant location to sort by what's nearby, or browse the curated chain list."
Coach Chat	First open	"Hi Robert. I'm here when you want a second opinion. What's on your mind?"
Help / Learn	No saved articles	"Browse by category, or search for a question. Every article ends with one thing you can try today."
Article Detail	Article unavailable	"We couldn't load this article. Try again, or browse another below."
Progress overview	<7 days of data	"Progress fills in as you log. Weight, photos, mood — one entry kicks it off."
Weight history	Empty	"Log a weight and we'll start your trend line."
Body photos	Empty	"Photos make recomposition real. Add one when you're ready."
Measurements	Empty	"Tape measurements catch what the scale misses."
Mood & energy	Empty	"How are you feeling? One tap and we start to see the patterns."
Habit Tracking	No habits chosen	"Pick 3 habits to start. Coach can suggest some."
Daily Recap	<1 full day of data	"Tomorrow's the start of your recap. The more you log, the smarter this gets."
Workout Detail	No workout planned today	"No workout planned today. Pick a template, or take a rest day."
Workout Log	No history	"Your first logged workout shows up here."
Activity Tracker	No Apple Health data	"Connect Apple Health to see your daily movement here."
Workout Plans	No saved plans	"Browse plans or build your own — coach can suggest one based on your goals."
Exercise Library	No favorites	"Tap an exercise for the form video and tip notes."
Schedule	Empty week	"Plan a workout to start your week."
Settings	n/a	n/a

9.1 Coach voice no-gos (D13)

Apply in all coach-facing copy (Daily Recap, Coach Chat, nudges, empty states, push notifications):

(1) never use "you missed", "you skipped", "you went over"; (2) never show adherence below 60% as an absolute % without trend comparison; (3) Daily Recap always leads with neutral or positive before any gap observation.

10. Daily Recap trigger (Max's blocker resolved)

- **Trigger time:** 8pm local device time.
 - **Quiet hours:** 10pm–7am. 8pm clears the window by 2 hours.
 - **Future-state inheritance:** if the user customizes their notification schedule in a future release, Daily Recap inherits that schedule.
 - **Travel / timezone change:** trigger fires at 8pm in the new local time after the device switches zones. No retro-fire.
-

11. Status

- ☒ Max review of v1 (2026-05-13)
 - ☒ App Map v2 reorganization (Robert, 2026-05-19)
 - ☒ All 5 of Max's Step 2 blockers resolved
 - ☐ Round 2 mockups generated (Dashboard v2, Inflows/Outflows widget + full, Activity overview, Meals/Nutrition hub, Exercise & Activity hub, Progress v2, Menu, Help, Tab bar component)
 - ☐ Combined review PDF compiled for final round
 - ☐ Sign-off recorded in `decisions.md`
-

Output of Phase 0.5 · Step 1 v2 — Updated 2026-05-19. Next: regenerate Step 2 (Flow Chart) and Step 4 (Mockups Round 2) against this IA.

SPEC DOC

Flow Chart v2.1

Per-screen flows, cross-cutting rules.

FuelWell — Flow Chart v2.1 (Phase 0.5 · Step 2)

Version: 2.1 (2026-05-21 — Phase 0.5.3 consolidation)

Status:  UPDATED 2026-05-19 to App Map v2; layered 2026-05-21 to v2.1 for the D1-D19 consolidation pass (see `decisions.md`). Navigation arrows and per-button behavior across all 29 top-level screens (17 re-homed from v1 + 12 new/elevated; Macro History removed per D12, Learn home retired per D10).

Purpose: answers *"what happens when I tap this?"* for every interactive element on every screen. Still no visual opinions — that's Step 4 (Mockups).

Format: Mermaid navigation diagrams + per-screen button reference tables.

1. Master navigation diagram

2. Onboarding flow (linear, unchanged from v1)

Nine steps. Each has Next and Back. HealthKit and Notification prompts are skippable but log the skip for contextual re-prompt later.

3. Per-screen button reference

3.1 Dashboard v2 (Home tab root)

Above-the-fold contract (Tier 1): Health Score hero · Inflows/Outflows widget · Verdict-of-the-moment CTA. No other elements allowed above the fold.

Top bar:

Element	Tap behavior
Hamburger (top-left)	→ Menu sheet
Brand / FuelWell wordmark (center, optional)	Decorative
Help icon (top-right)	→ Help screen

Tier 1 widgets (above fold):

Element	Tap behavior
Health Score hero (number + delta + sparkline)	→ Health Score detail
Health Score "Why?" expander	Inline reveal of weighting and recent contributors
Inflows/Outflows dual-ring widget	→ Inflows/Outflows full screen
Inflows/Outflows time-window pill (Today/Week/Month/Year)	Switches the widget's data window in place
Verdict-of-the-moment CTA (primary button)	→ Add Meal sheet (Photo default), pre-routed to predicted meal slot OR → Workout Detail (if next move is training)

Tier 2 widgets (first scroll):

Element	Tap behavior
Activity overview card	→ Exercise & Activity hub
Nutrition/Meals overview card	→ Meals & Nutrition hub
My day / week / month view	→ Inflows/Outflows full screen with matching window selected

Tier 3 widgets (progressive):

Element	Tap behavior
Progress overview summary	→ Progress tab landing
Daily Recap card (after dynamic trigger — see § 3.6)	→ Daily Recap screen
Coach nudge card (event-driven)	→ Coach Chat with prompt context preloaded

Day 1 state (D7): on the user's first session, before any meals or workouts have been logged, the Inflows/Outflows ring (Tier 1 slot) is replaced by a single large welcome card.

Element	Tap behavior
Welcome card — "Start here: log your first meal"	→ Add Meal sheet (Photo default)
Welcome card secondary link — "Take a tour"	→ Help screen

The welcome card auto-collapses after the first meal is logged; the canonical Inflows/Outflows ring takes its place on the next Dashboard render. Health Score hero remains visible (day-1 fallback copy) and Verdict CTA remains visible. Tier 1

contract is preserved — the welcome card *replaces* the ring within that slot, not stacks on top.

3.2 Menu sheet (new)

Opened from the hamburger icon. Full-screen sheet. See APP-MAP § 4 for the full hierarchy.

Element	Tap behavior
Close X	Dismiss sheet
User header (avatar + name)	→ Your Plan / Profile
Today's Health Score chip (in header)	→ Health Score detail
Any Tools row	→ that screen (e.g. Tools > Snapshot > Health Score → Health Score detail)
Coach Chat row	→ Coach Chat
Settings rows	→ relevant Settings sub-screen
Help row	→ Help screen
About row	→ About screen (Privacy, Terms, Share, Version)
Sign out (destructive)	Confirm sheet → Sign out → AuthCheck → Welcome

3.3 Help screen (new — replaces Learn tab)

The Help screen carries all article content. The v1 "Learn home" screen is retired in Phase 0.5.3 (D10) and not shipping at Pilot; Help + inline Learn cards in Coach Chat are the only article surfaces.

Notification preview privacy (D17): the Notification preferences sub-screen (reachable from Quick settings row → "Notifications") defaults notification previews to *private*. Default lockscreen copy: "Your coach has an update." Detailed previews are opt-in via a "Show detailed notification previews" toggle.

Element	Tap behavior
Back chevron	Returns to caller (Dashboard or Menu)
Search bar	Full-text search across articles, settings, FAQs
Featured article hero	→ Article Detail
Category tile	Filters Help to that category
Continue-reading card	→ Article Detail at saved scroll position
Quick settings row → Notifications	→ Notification preferences (D17 — preview defaults to private)
Quick settings row	→ that specific settings sub-screen
"All settings →" link	→ Settings (full)

Element	Tap behavior
Talk to coach card	→ Coach Chat
Send feedback link	→ mailto sheet

3.4 Inflows/Outflows full screen (new)

Element	Tap behavior
Back chevron	Returns to caller (Dashboard or My day view)
Time window segmented [Today/Week/Month/Year]	Re-renders the Sankey for that window
Sankey intake lane (e.g. "Lunch · 612 kcal")	→ drill-down sheet with that meal's macros
Sankey expenditure lane (e.g. "Workout · 250 kcal")	→ drill-down sheet with workout details
Info "i" icon	Inline explainer of the visualization
Detail rows below Sankey	→ matching detail sheet

3.5 Health Score detail (re-homed)

Delta framing (D14): the hero delta is cause-first ("↓ sleep variance this week"), not numeric-first ("↓ -2.3 vs last week"). Apply on the Dashboard hero too.

Recovery baseline (D11): Recovery is computed off a 14-day rolling average of resting HR. Before 14 days of wearable data exist, Recovery is excluded from the Health Score and remaining components proportionally re-weight. The Recovery component card renders: "Recovery unlocks with wearable data (Apple Watch or compatible device)" — explicit, not silent.

Element	Tap behavior
Back chevron	Returns to caller
Hero (current score + cause-first delta + sparkline)	Decorative
Component card (Nutrition / Training / Sleep / Recovery / Body comp)	→ that Progress section
Recovery component card (pre-14-day)	Renders the unlock copy above; → System permissions sheet (Apple Health)
"Why this score" expander	Coach-voice explainer of weights and recent contributors
Day-1 placeholder ("Building your baseline")	Decorative — no tap target

3.6 Daily Recap (re-homed)

Trigger time (D16 — dynamic): trigger time = (user's typical sleep onset from HealthKit, 7-day rolling median) – 90 min. Hard floor: never before 7 PM, never after 10 PM. Default to 8:30 PM if no HealthKit sleep data exists yet. Quiet hours 10pm–7am hard floor. Replaces the v2 fixed 8 PM trigger.

Voice (D13): Daily Recap copy always leads with a neutral or positive observation before any gap observation. Never use "you missed", "you skipped", "you went over". Adherence below 60% never rendered as an absolute % without a trend comparison.

Element	Tap behavior
Close X	Returns to caller (Dashboard or Menu)
Hero verdict	Decorative
Highlight rows (macro / sleep / mood / training / weight)	Tap → relevant Progress section
Tomorrow card	Decorative
"Reply to coach" button	→ Coach Chat with recap context preloaded

3.7 Your Plan / Profile (re-homed)

Element	Tap behavior
"Why this plan" expander	Reveals reasoning inline
"Recalculate My Plan" button	→ Recompute Plan confirm modal → recompute
Edit goal · body · dietary · lifestyle	→ respective onboarding step (single-step, returns here)
Settings gear	→ Settings

3.8 Meals & Nutrition hub (new tab landing)

Element	Tap behavior
Hero (Inflows/Outflows compact ring)	→ Inflows/Outflows full screen
Today's meals row	→ Food Detail (editable)
Add (+) button	→ Add Meal sheet
Quick access: Meal Log	→ Meal Log day view
Quick access: Restaurant Guidance	→ Restaurant Guidance
Quick access: Recipe Browser	→ Recipe Browser
Quick access: Meal Plan Generator	→ Meal Plan Generator
Quick access: Grocery List	→ Grocery List
Quick access: Macro History	Deep-link → Progress > Macro adherence (D12 — no standalone screen)
Recent food chip	One-tap re-log with last-used portion

3.9 Meal Log day view (re-homed)

Unchanged from v1.

Element	Tap behavior
Day selector	Changes the day's entries
Meal row	→ Food Detail (editable)
Persistent floating add button	→ Add Meal sheet (Photo default)
Restaurants shortcut	→ Restaurant Guidance
Recipes shortcut	→ Recipe Browser

3.10 Add Meal — Photo / Search / Scan (sheet)

Unchanged from v1. Photo is the default tab.

Element	Tap behavior
Segmented control [Photo / Search / Scan]	Switches input mode
Photo shutter	→ Camera → AI parse → Food Detail with parsed items
Search result row	→ Food Detail with portion editor
Barcode scan	→ Camera in scan mode → Food Detail
Recent foods chip	One-tap log with last-used portion

3.11 Food Detail / Portion editor (sheet)

Unchanged from v1.

Element	Tap behavior
Portion stepper	Adjusts macros live
Meal slot selector	Breakfast / Lunch / Dinner / Snack
Save	Persists meal → returns to caller
Delete	Confirm → removes meal

3.12 Restaurant Guidance (re-homed)

Unchanged from v1. Surfaceable from Dashboard verdict CTA when context = eating out, and from Meals & Nutrition hub.

Element	Tap behavior
Search restaurant	Filters curated list
Restaurant row	→ Restaurant Detail
Top 3 featured (when entered with macros context)	Each shows coach pick + macros immediately

Element	Tap behavior
Nearby toggle	If location not granted: greyed out with permission prompt on tap

3.13 Restaurant Detail (re-homed)

Element	Tap behavior
Menu item row	Macros inline; tap chevron → Food Detail to log
"Coach pick" badge tap	Inline explanation of fit
Log this item	→ Food Detail prefilled

3.14 Recipe Browser (re-homed)

Default view leads with "For your remaining macros today."

Element	Tap behavior
"For your remaining macros" section	Ranked recipes; tap → Recipe Detail
"Browse all" toggle	Switches to generic browse
Filter chips	Cuisine / time / difficulty

3.15 Recipe Detail (re-homed)

Element	Tap behavior
Add to Grocery List	Appends missing ingredients → returns with toast
Log as meal	→ Food Detail with macros prefilled
Save to favorites	Toggles favorite state

3.16 Meal Plan Generator (re-homed)

Element	Tap behavior
Generate button	Calls AI → returns 3 plan options
Plan option card (×3)	Each has single-line summary; tap → Plan Detail
Accept this plan	Persists plan; auto-populates Grocery List
Regenerate	New 3 options (no user-facing counter, no gamification)

3.17 Grocery List (re-homed)

Grouped by category (Produce / Protein / Pantry / Dairy / Other).

Element	Tap behavior
Checkbox	Marks item bought (strikethrough)
Item row long-press	Edit / delete

Element	Tap behavior
Add item (manual)	Inline text entry
Clear bought	Removes all checked items
Share	iOS share sheet (text export)

3.18 Macro History — deep link (D12)

Not a standalone screen at Pilot. The Meals & Nutrition hub's "Macro History" row deep-links to **Progress** → **Macro adherence** detail. See § 3.27 (Progress overview v2) for the Macro adherence card and its detail destination.

3.19 Coach Chat (re-homed)

Input placeholder: *"Ask me anything about today..."*

Voice mode removed (D2): the streaming full-screen voice-mode overlay (Mockup M30 V3) is OUT of Pilot. The mic button remains and dictates speech-to-text into the input field; there is no streaming voice conversation.

Presence indicator (D18): no persistent green "ONLINE" dot. When the coach is responding, subtle three-dot typing indicator appears above the latest user message; it disappears when the response begins streaming in. No "last seen" timestamps.

Voice (D13): Coach Chat copy follows the no-gos in `APP-MAP.md` § 9.1.

Element	Tap behavior
Message input + send	Standard chat send
Inline Learn card	Expands inline; "Read full article" → Article Detail
"Log this meal" suggestion chip	→ Add Meal sheet preloaded
Mic button (in input bar)	Speech-to-text dictates into the input field (D2 — no streaming voice mode)
New conversation	Archives current thread
Typing indicator (D18)	Decorative — appears while coach is composing; auto-dismisses on first token of response

3.20 Exercise & Activity hub (new tab landing)

Element	Tap behavior
Hero — Today's workout card	→ Workout Detail
Hero — Rest day card	→ Add a workout flow
Start workout button (when applicable)	→ Workout Detail with Active session pre-armed
Week-schedule day chip	→ that day's Workout Detail or Add workout
Quick access: Workout Log	→ Workout Log

Element	Tap behavior
Quick access: Activity Tracker	→ Activity Tracker
Quick access: Workout Plans	→ Workout Plans
Quick access: Exercise Library	→ Exercise Library
Quick access: Schedule	→ Schedule
Quick access: Trainer workouts	→ Free-form trainer workout entry
Recent workout row	→ Workout summary for that session

3.21 Workout Detail (re-homed + active session added)

Pre-workout state (planned but not started):

Element	Tap behavior
Hero strip (name, exercises, est. time, est. kcal)	Decorative
Stat row (Volume / Sets / Est. time)	Decorative
Exercise row	Tap → Workout Set Logger sheet
Add exercise (+)	→ Free-form exercise entry
Week-schedule pill	→ switch day's plan
Sticky "Start workout" button	→ Active session (transitions screen state)

Active session state (Max's blocker resolved):

Element	Tap behavior
Current exercise card (large)	Shows target sets × reps × weight
Set logger (per row)	Increment/decrement weight, log reps complete, mark set done
Rest timer chip	Auto-starts after set logged; tappable to skip
"Next exercise" button	Advances to next exercise
Pause workout	Suspends timer; preserves state
End workout	Confirm sheet → Workout Summary screen

Workout Summary state (post-session):

Element	Tap behavior
Hero stat (duration, total volume, kcal estimate)	Decorative
Per-exercise breakdown rows	Decorative
"How did that feel?" RPE selector	1–10 scale logs RPE
"Save and close"	Persists session → returns to Exercise & Activity hub

Element	Tap behavior
"Share"	iOS share sheet

3.22 Workout Log (new)

Element	Tap behavior
Filter (date range / workout type)	Filters list
Workout row	→ Workout Summary for that session
Export	iOS share sheet (CSV / PDF)

3.23 Activity Tracker (new)

Element	Tap behavior
Time range selector	Re-renders charts
Steps card	→ Steps detail
Active energy card	→ Active energy detail
Apple Health link row	→ System permissions sheet

3.24 Workout Plans (new)

Element	Tap behavior
Plan card	→ Plan Detail
Coach pick badge	Inline explainer
Build your own	→ Plan builder
Save plan	Stores to user's library

3.25 Exercise Library (new)

Element	Tap behavior
Search bar	Filters list
Category filter	Body part / equipment
Exercise row	→ Exercise Detail (form notes, video placeholder)
Add to favorites	Heart toggle

3.26 Schedule (new)

Element	Tap behavior
Week / Month toggle	Re-renders calendar
Day cell	→ that day's Workout Detail or Add workout

Element	Tap behavior
Add workout (+)	→ Plan picker → Workout Detail

3.27 Progress overview v2 (re-homed)

Default view: weekly.

Element	Tap behavior
Time range [Weekly/Monthly/90d/All]	Re-renders
Health Score trend card	→ Health Score detail
Weight card	→ Weight history
Macro adherence card	→ Macro adherence detail (this is the destination of the Meals & Nutrition hub "Macro History" deep-link per D12)
Body photos thumb	→ Photo viewer (swipe history)
Add Photo	→ Photo Capture sheet
Measurements row	→ Measurements detail
Add Measurement	→ Measurements Entry sheet
Mood/Energy card	→ Mood & energy history
Log Mood	→ Mood Entry sheet
Habit Tracking card	→ Habit Tracking detail

3.28 Habit Tracking detail (re-homed)

Element	Tap behavior
Full dot grid	Decorative (no celebratory chrome)
Habit row	Tap → toggle today's mark
Add / Edit habits	→ Habit editor sheet
Time-range selector	Weekly / 30-day / All

3.29 Article Detail (re-homed)

3-minute reads max. Every article ends with "One thing to try today" callout.

Element	Tap behavior
Back chevron	Returns to Help or Coach Chat
Share	iOS share sheet
Save	Adds to Saved in Help
"One thing to try" CTA	Inline action (e.g. "Log this swap" → Add Meal)
Related article card	→ Article Detail

3.30 Settings (re-homed)

Element	Tap behavior
Account	→ Account detail
Permissions	→ System permissions sheets
Notification preferences	Toggle list, quiet hours fixed 10pm–7am
Data export	→ Email export confirm
Sign out	→ Confirm → AuthCheck → Welcome (wipes local SQLite cache)

4. Cross-cutting interaction rules (global)

Rule	Behavior
Back gesture	Standard iOS swipe-from-left-edge available on every pushed screen
Tab tap while on tab root	Scrolls to top
Tab tap on deep screen in same tab	Pops to tab root
Tab labels (D9)	Single words in the tab bar: Home · Meals · Coach · Exercise · Progress. Full names ("Meals & Nutrition", "Exercise & Activity") appear only as hub screen titles.
Coach tab (D6)	Distinct visual treatment — raised-circle FAB-style container, inverted shading — regardless of active state. Coach Chat presence uses a typing indicator (D18), no persistent ONLINE dot.
Pull to refresh	Dashboard, Meal Log, Progress, Coach Chat
Offline write queue (D15)	Pilot ships with a local SQLite write queue. Write actions stay enabled offline; queued writes show a small banner "Offline — N logs will sync when you reconnect" and a subtle dot on the Home tab when queued items exist. Background sync fires automatically on reconnect. Conflict resolution: last-write-wins for the user's own data. Replaces the v2 "offline = read-only" rule.
Coach proactive push tap	Deep-links to the relevant screen
Notification preview privacy (D17)	Lockscreen previews default to private ("Your coach has an update"). Detailed previews are opt-in via Settings > Notification preferences.
Coach voice no-gos (D13)	Never use "you missed", "you skipped", "you went over"; never show adherence below 60% as an absolute % without trend comparison; Daily Recap leads with neutral or positive before any gap observation.
Onboarding skip	Only on permission steps (HealthKit, Notifications). System resurfaces the prompt contextually later (e.g. first Progress open prompts HealthKit).

Rule	Behavior
Sign-out cache wipe	Local SQLite wiped before Welcome renders. Dev unit test required.
Daily Recap trigger (D16)	Dynamic: <code>trigger = HealthKit 7-day median sleep onset - 90 min</code> . Hard floor never before 7 PM, never after 10 PM. Default 8:30 PM if no HealthKit sleep data yet. Quiet hours 10pm–7am hard floor. Inherits future custom notification schedules.

5. Resolved decisions (carried over from v1)

#	Question	Resolution
1	Dashboard verdict CTA pre-routes to a meal slot?	Yes — pre-routed to predicted next meal slot (or workout, if context = training).
2	Meal Plan auto-populates Grocery on Accept?	Yes — auto.
3	Sign-out wipes local SQLite cache?	Yes — wipe before Welcome renders. Dev unit test confirms.
4	Workout Detail active session in Pilot?	Yes — first-class feature (option a). Active session + rest timer + per-set logger + summary.
5	Photo default on Add Meal?	Yes — Photo is the default tab.
6	Weekly default on Progress?	Yes. Daily fluctuation noise is discouraging.

6. Status

- ☒ Updated to App Map v2 (2026-05-19)
- ☒ All Max's Step 2 blockers addressed (Tier 1/2/3 · Health Score formula · Workout active session · Empty states · Daily Recap timezone)
- ☐ Sign-off in `decisions.md`

Output of Phase 0.5 · Step 2 v2. Next: Step 4 Round 2 — Mockups for the 10 new screens, then compile combined review PDF.

Plan reveal

FUELWELL - PHASE 0.5 - STEP 4 - MOCKUPS

Promoted from approved wireframe § 3.9 V1 (2x2 number grid hero — egalitarian, all four targets at equal weight). Three states cover the payoff lifecycle: computing while the engine resolves the user's inputs, plan revealed with the why-this-plan expander collapsed, and the expander open with the full rationale + assumption chips. No back chevron per spec — the plan is committed.

VARIATION OF STATE

Engine still working. Hero grid renders as four shimmer skeletons; the strap below shows the running input count + a live spinner. CTA is dim until the plan resolves.

Numbers in 2,260 kcal headlines; protein, carbs, fat fill the supporting quadrants. Why-this-plan expander sits collapsed beneath. Start tracking primed in gradient.brand.

User tapped the expander. Four-sentence rationale + assumption chips show the data foundation behind the numbers. Each chip in the real app drills into the editor.

Per Max's review: payoff, not confirmation. No celebratory chrome — no confetti, no streak, no haptic.success burst. The reveal earns weight from the numbers + a single gradient.text headline phrase. DESIGN.md anti-pattern: "FuelWell rewards with information, not vibration."

Nine of nine filled. All steps done. No back chevron — the plan is committed and edits live in 3.23 Your Plan / Profile.

Eyebar "PLAN READY" with a small success-green pulse dot, then **Outfit 700** 30pt headline "Your plan, live now." — the second clause picks up **gradient-text**. (#00D278 to #00B04B) per DESIGN.md, the only place gradient-text appears in onboarding. Subtitle below: "Calibrated to your inputs. We'll recalibrate as your body and life change."

Single bordered hero card, **radius.xl** 28pt, with a 1.5pt **color.semantic.success** stroke and a soft green-tinted drop shadow — the only “celebratory” affordance. 2x2 grid. **Calories** top-left (kilo slightly larger at 48pt). **Protein** top-right, **Carbs** bottom-left, **Fat** bottom-right. Each cell carries a 10pt switch matching the macro token (**color.macro.protein/carbs/fat**) introducing the color vocabulary the Dashboard will reuse. Numbers in **DM Sans** 600 42pt tabular figures, unit caplet underneath.

Computed for 32-yr-old female, 158 lb, moderate activity, maintain [the inputs we showed in M03 & M04]: **2,260 kcal · 160 g protein · 245 g carbs · 70 g fat**. Round numbers, no hedging — the engine commits.

Critical per Max — never cut. Single card below the grid with an info-circle glyph in info-blue, "Why this plan" label, chev right. Tapping reveals a four-sentence rationale + a row of assumption chips (Maintain - Moderate - 156 lb - 32 yr - Female - Light dietary constraints). Tapping a chip in the real app drills into the editor; here they're surfaced as the data foundation below the numbers.

Start tracking — 52pt tall (taller than other onboarding CTAs to telegraph this is the terminal step), `gradient.brand` + `elevation.cta` halo, right-arrow glyph trailing, V1 (computing) shows the disabled-dim variant since the plan isn't ready yet.

Hero grid renders as four shimmer skeletons while the engine resolves. A single "Computing your plan..." strap sits below with a green spinner and the running subtitle "Resolving 5 inputs - 2 constraints - activity level". 1.2s typical resolution time in spec; visible loader to telegraph the work being done.

The macro swatches and number format introduced here are the same vocabulary the dashboard ring + macro rows will use — establishes the visual contract on the first surface, so the dashboard reads as continuity rather than a fresh layout.

Dashboard — V1 reference

REFERENCE

10-dashboard.jpg

M10 Dashboard · Home tab root

Promoted from approved wireframe § 3.10 V1 (density-optimized vertical scroll). Verdict-first per DESIGN.md — the engine's answer leads, the data follows. Three states cover the lifecycle a user encounters: on-track mid-day, off-target caution, and the post-onboarding day-zero empty state.

iPhone 16 Pro · 393 × 852 pt
Light · color, bg, base #F4F5F7
Tab · Home

VARIATION 01 · STATE

Mid-day · on track

Friday 3:42 PM. User has logged breakfast, lunch, an afternoon snack. Verdict promotes the engine's dinner pick. Macros tracking sub-target across all three channels.

VARIATION 02 · STATE

Evening · caution

Friday 8:14 PM. Lunch ran hot and the pepperoni-pizza log just pushed fat over plan. Verdict flips to warning, macros band shows the fat fill spilling into error-red, coach reaches with a swap.

VARIATION 03 · STATE

Day 1 · post-onboarding

First open after plan reveal. Nothing logged yet. Calories card shows 0 / 2,260 with a neutral chip, macros band is muted, schedule highlights today as the empty starting point. Welcome verdict invites the first log.

MOCKUP NOTES · STEP 4

VERDICT CARD · TOP OF CONTENT

The decision-engine surface, per DESIGN.md § Components → ScreenScaffold rule: verdict is always above the data. Uses the inverted `color.bg.elevated #0F117` highlight row as the canonical workhorse for emphasis in a light theme. Title in Outfit 600 22pt with a gradient-text accent on the operative phrase; subtitle reads the supporting context in `color.text.onDarkMuted`. Primary CTA inside is `gradient.brand` with elevation.cta; secondary CTA is the ghost "Why?" link. Verdict pulse-dot color tracks the verdict first — success-green on track, warning-amber on caution.

CALORIES CARD

White card, `radius.lg`, `elevation.3`. Hero number in DM Sans 600 32pt tabular followed by the target in muted color; a small chip on the right shows the running delta (+/- vs. plan) in `color.semantic.success` tint when in budget, warning tint when projected over. 32pt 7-bar histogram below shows the week's calorie trend — today is the success-green bar, past days are `color.text.primary`, future is the dim track.

MACROS BAND

The dark inverted-row from DESIGN.md — `color.bg.elevated #0F117`, `radius.lg`. Three columns separated by hairline dividers in `color.bg.border.dark`. Each column carries an 8pt macro-token swatch, label in `color.text.onDarkMuted`, value in DM Sans 600 22pt, "of N" beneath, and a 4pt fill bar in the macro color. In V2 the fat bar overflows to `color.semantic.error` red to telegraph the over-limit state — same shape, different color, no text change.

WEEK SCHEDULE

Seven-day strip, each tile `radius.md` with the weekday letter, date number in DM Sans 600, and a verdict-color dot beneath. Today is the inverted dark tile so the day reads as the focus point of every glance. Future days drop to `color.bg.base` with disabled text — the engine has nothing to say there yet.

WORKOUT + HABIT PANES

Side-by-side cards in a 2-column row. Workout pane shows the next session ("Strength · Push, 5pm") with three numeric chips (45 min · 4 lifts · 90% comp). Habit pane shows a 7×N dot calendar in `color.semantic.premium` purple — purple is the habit tracking accent color from DESIGN.md (deliberately distinct from macro / verdict colors so the eye can route by hue alone).

COACH NUDGE

3pt premium-purple left accent (the FuelWell coach's signature stripe). Avatar uses the same gradient as the brand mark. Body is one or two sentences in coach voice referencing today's real data — never generic. Quick-reply chips beneath open the Coach tab pre-loaded with the response. Only renders when the engine has a trigger — never as a placeholder.

MEALS LIST · TODAY

Compact rows: 36pt color-coded meal-type icon, name + meta line (time, calorie subtotal, source: recipe or restaurant), trailing kcal number. Pending slots ("Dinner") render with a dashed border and the coach's suggested kcal in muted text — a soft commitment the user can replace with a tap. Header carries a live total + the macro fingerprint of what's already eaten.

FAB

56pt circular Quick-Add fab, `gradient.brand` + a strong shadow. Floats 22pt above the tab bar at the right edge. Opens 3.12 Add Meal sheet. Same placement on every variation — anchor for muscle memory.

TAB BAR

iOS-style five-tab bar with blur surface. Tabs: Home (active), Log, Coach, Learn, Progress. Active state is filled glyph + `color.text.primary`; inactive is line glyph at `color.text.muted`. 30pt bottom inset for the home-indicator gap.

Dashboard — Day 1 welcome (default) NEW

28-dashboard-v2.jpg

Dashboard — populated (canonical) NEW

28-dashboard-v2-populated.jpg

M28 Dashboard v2 — Populated (canonical)

Canonical Dashboard for users with data. Above the fold: Health Score hero + Inflows/Outflows V1 full dual ring (D5) + verdict-of-the-moment CTA with data-freshness stamp. Tab bar v2 features Coach as a raised-circle FAB (D6) — prominent regardless of active state. Tab labels: Home · Meals · Coach · Exercise · Progress (D9). FOLD line marks the 852pt viewport edge.

iPhone 15 Pro · 293 × 652 pt
Light · color, bg, base: #F4F3F7
Frame extended to show Tier 3/5 below fold
Tab: Home

MOCKUP NOTES · M28 DASHBOARD V2

TOP BAR V2	Three-up: hamburger menu (left) opens the full nav drawer (Habit Tracking lives here now!), compact FuelWell wordmark center with a today-stamp, help icon (right). No avatar in the bar — avatar moves into the menu drawer.
TIER 1 · HEALTH SCORE HERO	White card, elev 2, radius lg. Eyebrow HEALTH SCORE. Massive DM Sans 700 score at 60pt (e.g., 86.4). Right-side composite breakdown stacks the five components in DESIGN order: Nutrition 35%, Training 25%, Sleep 20%, Recovery 10%, Body comp 10% — each as a percentage fill so the user can see at a glance which pillar is dragging the average. Delta pill below the score (▲ 4.2 last 30d) and a Why? link in color:semantic:info to the explainer sheet (M26). Day-1 fallback swaps the score for a 92pt dashed placeholder ring and the coach copy: Building your baseline — 7 days of data unlocks your Health Score.
TIER 1 · INFLOWS/OUTFLOWS DUAL RING	Centerpiece, white card, radius lg, 200pt SVG with two concentric rings. Outer ring = calories ingested, segmented by macro (protein #00C02B · carbs #F96C00 · fat #A855F7). Inner ring = calories expended, segmented by source (BMR #6B7290 · activity #00B4D8 · workout #E87AD1). Centered: net kcal in DM Sans 700 30pt with a directional arrow chip (success-green for deficit, warning-amber for surplus). Balance pill beneath: In range (success), Slight surplus (warning), Over by X kcal (error). Tap "Expand +>" opens M30 Sankey full-screen view. Empty state replaces the center with a tappable circle and the copy Log your first meal.
TIER 1 · VERDICT CTA	The decision-engine surface, identical pattern from M10 but compressed (190pt headline vs 220pt) since two visual blocks sit above it now. Inverted color:lg,elevated surface with verdict-tier radial wash and pulsing eyebrow dot.
FOLD MARKER	Dashed full-width hairline at the 852pt mark — the actual viewport bottom. Everything above is Tier 1 (must-see, never below). Everything below requires scroll.
TIER 2 · ROW OF TWO + DWM	Activity overview (steps + small step-bars sparkline + active minutes), Nutrition overview (kcal logged + 3-row macro micro-bars). Below them, a "My day / week / month" segmented control feeding a 7-bar chart of intake vs expenditure across the selected window.
TIER 3 · PROGRESSIVE DISCLOSURE	Progress overview (one-line trend + 100pt weight sparkline) — always visible. Daily Recap (COACH RECAP 8 PM) — visible only after 8pm; Variation 2 shows it active, Variation 1 hides it. Coach nudge — event-driven; absent in V1, present in V2 (caution swap suggestion). All three slots collapse to nothing on Day-1.
TAB BAR V2 (COACH SPEECH-BUBBLE)	Five-tab order: Home · Meals · Coach · Exercise · Progress. Coach is the visual focal point — its icon sits in a 52pt color:lg,elevated speech-bubble container raised 16pt above the row, with a tiny tailnudge at the bottom-left. Coach retains its distinct shading even when not the active tab. Variations 1 & 3 use the dark #007070 bubble; Variation 2 uses the alternate gradient:brand bubble per the Round-2 spec ("dark fill OR soft gradient.brand"). Active tab text in color:text:primary, inactive in color:text:muted.

Inflows / Outflows widget — V1 dual ring

UPDATED

29-inflows-outflows-widget.jpg

M29 Inflows / Outflows · Dashboard widget — V1 (locked, D5)

Locked to V1 (Full dual ring) per D5. Outer ring shows macro intake (P / C / F) with gram counts; inner ring shows expenditure source (BMR / Activity / Workout) with kcal counts. Inflow > and outflow > icons sit alongside each ring. Thin Tier 1 siblings (Health Score above, Verdict below) are dimmed so the widget reads as the focus of the frame. The widget itself is the tap target → opens M30. Energy balance full-screen.

iPhone 16 Pro · 393 × 852 pt
Light · color: bg-base #F4F3F7
Focus · M28 widget · 200×248pt ring

VARIATION 01 · LOCKED

Full dual ring (D5 canonical)

Per D5 the only approved variation: outer macro intake ring + inner expenditure source ring, with inflow > / outflow > icons labeling each. Full legend strip stacks IN (grams) / OUT (kcal) rows beneath. 248pt overall.

VARIATION 01 · LOCKED · EMPTY

Day 1: zero logged

Outer + inner rings collapse to a single dashed track. Center reads 0 kcal logged today with a primary + Log first meal button. Center reads 0 kcal logged today with a primary + Log first meal button.

MOCKUP NOTES · M29 WIDGET STUDIES

EYEBROW & TIME WINDOW

ENERGY BALANCE · TODAY in body 700 caption, secondary color. Below it a 4-segment pill row [Today][Week][Month][Year] in **bg-base** with the active selection in **text-primary** (inverted chip). Window switches scoped to the widget — full-screen view (M30) inherits this state on tap.

OUTER RING · INGESTED

18pt stroke. Three macro arcs in canon colors: **protein #00D278**, **carbs #F9E08B**, **fat #A855F7**. Round line-caps render the tiny end-dots automatically. A faint **rgb(15,172,0,0.04)** track underneath holds the ring shape when arcs don't fill the circle.

INNER RING · EXPENDED

10pt stroke (lighter weight to subordinate to intake). Three source arcs: **BMR #E87290**, **activity #00B40B**, **workout #E87AD0**. BMR is always the largest band by definition — it sets the eye's baseline for "how much you'll burn just existing".

CENTER

Massive DM Sans 700 net number with a signed prefix (**+128**, **-320**) at 44pt (V1), 40pt (V2 compact), 54pt (V3 dense). Below: **kcal** unit caption. Arrow chip: success-tinted circle with **arrowdownright** for deficit, warning-tinted circle with **arrowupright** for surplus.

BALANCE PILL

Left-aligned beneath the ring. In range at success-10% / success-text, **Slight surplus** at warning, **Over by X kcal** at error. Border at 32% alpha, text at full saturation.

LEGEND STRIP

V1 stacks two rows (In / Out) of three swatch-value chips. V2 swaps the inner ring for a 12pt segmented mini-bar (expenditure summary in fewer pixels). V3 pulls the legend to the right of the ring, two-column.

EMPTY STATE

Ring collapses to a single dashed track. Center renders **0 kcal logged today** in muted disabled color, with a primary **+ Log first meal** CTA. Tapping the card opens the same M30 destination — empty state there.

Inflows / Outflows full-screen — V3 hybrid UPDATED

30-inflows-outflows-fullscreen.jpg

M30 Energy balance · full-screen Sankey — V3 Hybrid (locked)

Locked to V3 Hybrid layout per Max recommendation. Three summary stats above a Sankey-style flow diagram, with detail rows directly underneath. Bolder labels and bigger headers. Lanes representing <7% of daily total collapse into a single "Other" band (footnote on the diagram). Each lane row is a 28pt tall for a comfortable tap target. Top-right orientation toggle (portrait ↔ landscape) flips the Sankey direction.

iPhone 15 Pro · 393 × 852 pt
Pushed screen · tab bar visible
Tap source · M29 widget

variation 01 · locked

V3 Hybrid · stats wrap Sankey (canonical)

Locked layout: three summary tiles above a Sankey, detail rows directly underneath. Bolder headers and stat numbers. Lanes < 7% of daily total collapse into a single "Other" band; footnote sits beneath the diagram. Portrait/landscape toggle in the nav.

variation 01 · locked · empty

V3 Hybrid · nothing to flow

Hybrid empty — zero stats sit above a tiny pillar-only Sankey stub. The detail section reads as the empty hero.

MOCKUP NOTES · M30 SANKEY FULL-SCREEN

BAND GEOMETRY

Bands are cubic-Bézier ribbons connecting a source rect on one edge to a destination rect on the canonical intake/expenditure columns. Thickness across the band equals the source kcal value scaled into the available axis range; bands ease in and out via control points at 50% of the horizontal (or vertical) distance.

COLOR

Intake bands are colored by their **dominant macro** — protein-heavy meals in `#00C278`, carb-heavy in `#F59E0B`, fat-heavy in `#A855F7`. Pending/projected meals (dinner before logging) render at 35% opacity with a dashed band-edge as the visual cue. Expenditure bands follow the source palette: BMR `#6B7280`, activity `#00B40B`, workout `#EF4A39`.

CENTER COLUMNS

Two adjacent inverted (`color:gray` elevated) pillars labeled TOTAL INTAKE and TOTAL OUT, each marked with its kcal in DM Sans 700. The gap between them (where they don't quite line up vertically) is the visualization of net surplus/deficit; a small "Net +128" tag bridges them with the semantic color of the verdict.

LAYOUTS

V1 Classic reads left → right; the most natural translation of the metaphor and the spec primary. **V2 Vertical** flips to top → bottom which scans better on a narrow phone column (intake "fills" the day, expenditure drains it). **V3 Hybrid** places the three summary stats above the Sankey and the lane detail directly below in one continuous reading column — most scannable.

DETAIL ROWS

Tap-target rows beneath the Sankey for every lane. Intake rows carry *P/C/F* macro chips; expenditure rows carry source labels and methods (Apple Health vs FuelWell-logged). Pending lanes render dashed with the projected kcal in muted text. Tap → drill-down sheet (not in this mockup; lives at the route `/energylane/id`).

EMPTY STATE

Replaces the Sankey card with a single dashed empty-state panel: *Log meals and workouts to see your energy flow. Today's view fills in as you go.* Summary tiles still render as zeros; detail-row section collapses to a single "Log a meal" CTA.

HEADER

Display 700 26pt "Meals & Nutrition" with a sub-line ("Fri - 3 of 4 meals logged"). Trailing + button uses `gradient.brand` — opens M12 Add Meal sheet.

TIER-1 HERO · EAT NEXT

Redesigned per Phase 0.5.3. Inverted `bg.lightest` "What should you eat next?" card surfacing 2-3 coach-recommended meals with thumbnail/lygh, macro-fit pills (+P / +C / +F vs the user's remaining target), and a one-tap gradient.brand Log button per row. Pick rationale ("Ranked by fit to your remaining macros") lives as a quiet footnote. Replaces the prior plate-ring readout, which is demoted to the secondary card below.

REMAINING MACROS CARD (SECONDARY)

Compact light-surface card directly beneath the eat-next hero. Shows kcal-left headline and three macro gauges (P / C / F left + tiny progress bar). Demoted from the old hero — same data, lower visual weight. Tap → M30 Energy balance for the full readout.

TODAY'S MEALS

Same row pattern as M10/M18 — color-coded meal-type icon, name + meta line, trailing kcal. Pending slots render dashed with the coach's projected kcal. V1 & V2 use the vertical list. V3 shows meals as a horizontal card row so the rest of the screen breathes.

QUICK ACCESS · DESTINATIONS

Five per spec (Macro History removed per D12 — it now deep-links from Progress): Meal Log, Restaurant Guidance, Recipe Browser, Meal Plan Generator, Grocery List. Color tokens follow each destination's role — green (food), warning-amber (restaurants), info-blue (recipes), premium-purple (plan), orange (grocery).

RECENT FOODS

Horizontal scroll of 132pt cards: meal-type-tinted placeholder image, name, kcal+macro chip. Tap → re-logs the same meal at "now" (M13 portion editor open).

EMPTY STATE

Hero swaps to coach-voice: No meals yet today. The fastest way is a photo — try the + above. Or coach can suggest something that fits your remaining macros. Two CTAs: Photo log (primary, opens camera) and Coach suggest (ghost). Today's meals collapses to dashed slots for breakfast/lunch/dinner. Recent foods still renders (last-week leftovers).

EXERCISE & ACTIVITY

Exercise & Activity tab

32-exercise-activity-tab.jpg

M32 Exercise & Activity · tab landing

Hub screen reached from the Exercise tab in the v2 bar. Hub title at the top of the screen reads "Exercise & Activity" (full name), even though the tab (BAR label) is just "Exercise". Locked to V1 — list Quick-access pattern. Today's workout (or rest-day card) here, this-week strip, Quick access list of all six destinations (Workout Log · Activity Tracker · Workout Plans · Exercise Library · Schedule · Trainer workouts), and recent workouts.

iPhone 15 Pro · 393 × 852 pt

Tab: Exercise & Activity

variation 01 · LOCKED

Spec primary · list Quick-access

Strength · Push as today's workout hero, this-week strip below, grouped list of 6 destinations (Workout Log · Activity Tracker · Workout Plans · Exercise Library · Schedule · Trainer workouts), three recent rows.

variation 01 · EMPTY

First-time · list

Hero swaps to the coach-voice prompt with [Coach suggest] [Browse plans]. Week strip reads all-rest. Recent rows collapse to a dashed coach-voice line.

MOCKUP NOTES · M32 EXERCISE TAB LANDING

HEADER

Display 700 26pt title "Exercise & Activity" with a small day-stamp sub-line ("Fri · 5 days this week"). Trailing 36pt + button uses `gradient.brand` for the primary quick-add. No back chevron — tab roots never have one.

TODAY'S WORKOUT HERO

Inverted `lightelevated` surface with an orange radial wash (the training accent). display 700 22pt workout name, three info chips (duration, lifts, projected kcal), and an orange "Start workout" CTA. Rest-day flips to a light surface; pulse dot drops to `text.disabled`; CTA becomes ghost "Add a workout".

THIS WEEK STRIP

Horizontal scroll of 7 chips. Today reads as the inverted dark chip with the orange status pill ("Workout"); other days carry a light pill colored by their status (workout · rest · upcoming). Minutes line beneath. The strip wraps Mon-Sun and is sticky-scrollable horizontally.

QUICK ACCESS

Six destinations per spec: Workout Log, Activity Tracker, Workout Plans, Exercise Library, Schedule, Trainer workouts. V1 & V3 render as a single grouped list (iOS-pattern). V2 renders as a 2-column card grid for visual scan. Icons follow semantic tones — orange for workouts/plans, info-blue for tracker, premium-purple for library, success-green for schedule, warning-amber for trainer.

RECENT WORKOUTS

Last 3 logged sessions. V1 compact rows (name · date · duration + kcal trailing). V2 same row pattern (rows are easier to scan in two-pane layouts). V3 a single horizontally-scrolling cards row, swipeable.

EMPTY STATE (FIRST-TIME)

Hero swaps to a coach-voice prompt: No workouts logged yet. Want a quick suggestion from coach, or pick a plan? Two CTAs side-by-side: `gradient.brand` **Coach suggest** and ghost **Browse plans**. This-week strip still renders (chips read "rest" / "upcoming"). Recent-workouts section collapses to a dashed coach-voice placeholder.

PROGRESS

Progress tab UPDATED

34-progress-tab-v2.jpg

M34 Progress · v2 (Health Score + Habits)

Revised from M22. Adds the Health Score trend card at the top (slides to M35 detail) and a new compact Habit Tracking card at the bottom — Habit Tracking lives here and in Menu, not on Dashboard. Section order: Health Score → Weight → Macro adherence → Mood & energy → Habit Tracking. Frame extended so reviewers see the full stack without scrolling.

iPhone 15 Pro, 382 × 852 pt
Frame extended for review. (CSD) needed
Tab: Progress

VARIATION 01

Spec primary Weekly

Section order per spec: HS: Weight: Macro adherence: Photos: Measurements: Mood: Habit Tracking. Frame extended: CSD marked between Weight and Macro adherence.

VARIATION 02

Monthly default with mood heatmap

Range pre-selected to Monthly. Weight chart adds the 3-week moving-average overlay. Mood card surfaces a 5-week × 7-day heatmap below the data row.

VARIATION 03

Habits-up · del-per-weight-in

Habit Tracking pulled up to second position (treated as a Tier-1 surface on this tab). Weight chart switches to dot-per-entry. Measurements moves to del to keep scoring inputs (mood, photos) earlier.

VARIATION 01 · EMPTY

Day 1 - baseline building

All cards collapse to coach-voice placeholders. HS card swipes to the dashed ring "Building your baseline" panel. Weight card carries the single "Add weight" primary CTA. Habits card promotes "Add habits" gradient button.

VARIATION 02 · EMPTY

Day 1 - monthly empty

Same empty state, but the "Add weight" input is removed — the cards all return to the same coach-voice copy.

VARIATION 03 · EMPTY

Day 1 - habits-up empty

In V2's layout the Habit Tracking empty surface second — coach pushes the user toward picking habits before weighing in, since habits compound earlier.

MOCKUP NOTES · M34 PROGRESS V2

RANGE SELECTOR

4-segment pill: Weekly (default) · Monthly · 90-day · All. All cards re-scale to the active window. Variation 2 changes the default to Monthly so reviewers see how the heavier charts behave.

HEALTH SCORE TREND (NEW)

First card. Top eyebrow: HEALTH SCORE. Top DM bars: 700 score (86.4), 30-day delta pill (+44.2). Right use-line: Today. Tap → M35 Health Score detail. The composite is the single number that integrates everything below it — putting a first line the user sees "I'm trending in the right direction!" before diving into pills.

WEIGHT

Line chart of weekly averages (V1 single-line, V2 line × 7-day moving-average overlay, V3 line × dot-per-entry). Below the chart: a summary stat ("178.1 lb · -2.4 lb this month") and a primary "Add weight" button.

MACRO ADHERENCE

Seven daily stacked PICT bars across the week. Adherence is shown as percentage of target hit per day — bars stack 0-100. Today highlighted (Variation 1 with a white dot on the top-right stack, Variation 2 with a colored ring). Future days dim to lighter. Summary stat: "78% on track · +12 pts vs last week".

BODY PHOTOS

Horizontal scroll of 60/120 thumbnails. Data overlay along the bottom edge. Trailing tile is a dashed add-photo card. Photos render as cool-tone gradient placeholders per the no-hand-drawn imagery rule.

MEASUREMENTS

Standard iOS pattern list of waist / hips / chest / arms / etc., trailing trend pill colored green (down, in place) / amber (up, watching) / red (up, bad). Tap row → full history sheet.

MOOD & ENERGY

Compact 14-day × 4-habit dot grid in color-segment-premium purple. Each row shows the habit name × count, then a 14-day dot grid (on / miss / future), trailing % completion. "View all habits" link beneath routes to M27 Habit Tracking detail. Moved off Dashboard — accessed from here and from the Menu only.

HABIT TRACKING (NEW)

Cards collapse to an inline coach-voice line. Top card swipes to a "Building your baseline" panel matching the Dashboard's day-1 treatment. Coach copy: "Progress fills in as you log. Weight, photos, mood — one entry kicks it off. Single primary CTA pinned at the top."

EMPTY STATE

Cards collapse to an inline coach-voice line. Top card swipes to a "Building your baseline" panel matching the Dashboard's day-1 treatment. Coach copy: "Progress fills in as you log. Weight, photos, mood — one entry kicks it off. Single primary CTA pinned at the top."

Menu — hierarchical collapsed

UPDATED

35-menu-hierarchical.jpg

M35 Menu sheet

Full-screen sheet from the hamburger icon on any screen. D4 lock — hierarchical-collapsed, single-pane. Eight categories visible by default as 16pt 700 rows with chevron affordances: Snapshot · Tracking · Meals · Training · Coach · Settings · Help · About. Each row expands on tap to reveal its children (Tracking is rendered expanded here to demonstrate the pattern). Tighter row padding (~9px vs the prior 16-20px) so all eight categories sit above the fold without scrolling. A dedicated Help row sits directly under the user header for one-tap entry.

iPhone 15 Pro · 393 × 852 pt
Sheet · presented over the underlying screen
Frame extended for review · FOLD marked

V1 · LOCKED (D4)

Hierarchical collapsed · single-pane

D4 resolution. All eight categories visible by default as single rows with a chevron; each expands on tap (Tracking shown expanded here to demonstrate the pattern). Larger row text (16pt / 700), tighter 9px vertical row padding. A dedicated Help row sits directly under the user header for one-tap access.

MOCKUP NOTES · M35 MENU

HEADER & PROFILE

Title "Menu" in display 700 22pt, close-X in the top-right (icon-button, light surface). Below it a 52pt avatar card on inverted **bg.elevated** — name, goal pill, and today's Health Score with a small delta arrow. Avatar is itself tappable → routes to Your Plan / Profile (M24).

HIERARCHICAL CATEGORIES

Locked to single-pane hierarchical-collapsed per D4. Eight categories — Snapshot, Tracking, Meals, Training, Coach, Settings, Help, About — render as a single grouped list of 16pt 700 category rows with a chevron. Tap any row to expand its children in-place (chevron rotates 90°; row background shifts to **bg.base**); tap again to collapse. No two-tier tile redesign. Tracking is shown expanded in this mockup to demonstrate the pattern. Row vertical padding tightened from 11px to 9px so all eight categories fit above the fold without scroll.

ICON PALETTE

Token-bound: Health Score / Daily Recap on **success** green; I/O · My day on **info** blue; Habits / Mood / Photos on **premium** purple; Meals destinations split across **success**, **warning**, **info**, **premium**, **orange**; Training on **orange** and **info**; Settings / Help / About on neutral. The Sign-out row is the only destructive row — label in **color.semantic.error**.

HELP ROW (TOP)

A dedicated Help row sits directly under the user profile header — info-blue circular icon, title "Help" + sub-line "FAQs, articles, ask coach", chevron. Tap → opens M36 Help directly. Mirrors the Help category lower in the list (intentional duplicate for one-tap access from any session).

COACH · SETTINGS · HELP · ABOUT

Same category-row treatment as Tools sub-categories. Coach expands to one child (Coach Chat); Settings expands to Account, Permissions, Notifications, Data export, Sign out (destructive); Help expands to Learn articles, Contact support, Send feedback; About expands to About FuelWell, Privacy, Terms, Share, Version.

STICKY BEHAVIOR

The Profile block is sticky to the top of the sheet when the user scrolls. The close-X stays in the safe-area top. Tab bar does **not** render here — the Menu is modal.

CROSS-TAB / COMPONENTS

Help UPDATED

36-help-screen.jpg

M36 Help

Reached from the Help icon on Dashboard (and the Help row in M35 Menu). Header now carries a dedicated Help-center icon (info-blue) on the right. Search field shows a sectioned-results preview (Articles · Settings · Ask Coach). Inline chip menu above the article grid (Onboarding · Macros 101 · Health Score · Coach Chat tips). Category tile icons enlarged ~30%. "Continue reading" and "Quick settings" rows condensed. New "FAQ & Knowledge Base" external row → fuelwellhealth.com/help. "Talk to coach" promoted to a full-width prominent dark card with gradient-brand CTA.

iPhone 15 Pro · 883 × 882 pt
Pushed screen · back chevron
Routes: Article (M423), Settings, Coach (M430)

VARIATION 01
Spec primary

Search → Featured (one big card) → Categories → Continue reading → Quick settings → Coach hand-off → feedback link.

VARIATION 02
2-up featured row

Featured today expands into one big card plus two smaller secondary cards beside — useful when fresh editorial content is publishing weekly.

VARIATION 03
Browse-first

Categories pulled above Featured — for users who self-navigate by topic rather than read the recommended pick.

MOCKUP NOTES · M36 HELP

HEADER · HELP ICON

Back chevron left, "Help" title centered, info-blue Help-center icon button on the right (clearer affordance than relying on the screen title alone). The right-side icon opens an in-context help tour from any sub-route.

SEARCH · SECTIONED PREVIEW

Option A resolved. One search field "Search articles, settings, or ask a question" plus a preview dropdown directly beneath that sections matches into Articles (3), Settings (2), and a single Ask Coach row that converts the query into a coach chat. Lower visual noise than three parallel search surfaces; clearer intent split than a single undifferentiated result list.

INLINE JUMP-TO MENU

Horizontal pill row above the article grid with high-value links: Onboarding, Macros 101, Health Score, Coach Chat tips. Active state inverts (dark surface, white text).

FEATURED ARTICLE

One hero card. ChatGPT-images-2.0-caption placeholder (cool gradient with the caption rule in the bottom-left), 3-min read pill, title, lead, "One thing to try today" takeaway lives in a slim base-tone block beneath the lead with a success-green accent bar — the article-end commitment surfaced up front.

CATEGORIES SCROLL

Seven horizontal tiles per spec: Nutrition basics · Macros explained · Eating out · Recovery · Training fundamentals · Sleep & energy · Mindset. Each carries a token-colored icon and an article count.

CONTINUE READING

List of articles the user started but didn't finish. 42pt thumbnail + title + progress track (info-blue fill) + percent. Renders only when there is in-progress reading; collapses cleanly on a fresh install.

QUICK SETTINGS

The three rows that drive ~80% of settings traffic: Notifications, HealthKit, Account. Plus an "All settings" link to the full Settings screen. Right-aligned value column shows current state (On · Connected · @jordan.c).

FAQ & KNOWLEDGE BASE

Single list row, info-blue brain icon. Title "FAQ & Knowledge Base", sub-label "fuelwellhealth.com/help", trailing external-link mark "↗". Tap → external Safari to the public knowledge base.

TALK TO COACH (PROMINENT)

Promoted to a full-width inverted dark card, a top row with the coach avatar + line "Have a question? Ask coach directly." / sub "Replies usually within seconds · 24/7", and beneath it a full-width gradient-brand CTA "Start a coach chat ↗". More visual weight than the prior text-style mini-card.

SEND FEEDBACK

Text-link only, centered at the bottom — intentionally low-emphasis, signals it's the route of last resort.

VARIATIONS

V1 single featured card (spec primary). V2 a 2-up featured row + a "Latest" tile, useful when the editorial team has fresh content. V3 categories pulled above featured — for users who self-navigate by topic.
